Real-life advice and guidelines to take the guesswork and the fear out of fasting. Fasting is emerging as one of the most exciting medical advancements in recent memory. Its list of benefits extends far beyond weight loss and includes improved cardiovascular health, lower blood pressure, protection against cancer and better cognitive function. While many of us may be able to handle the physical effects of fasting, the mental and social challenges are often daunting. There are so many opportunities to eat during the day, and sometimes it's rude not to participate in meals. What do you do with the time you used to spend eating? How do you navigate social situations while fasting? How can a food addict mentally prepare for a fast? Life in the Fasting Lane fills all of these gaps, and more, by bringing together three leading voices in the fasting community to provide a book written for both the body and the mind, helping people cope with all aspects - physical, social, emotional, medical - of fasting. It blends cutting-edge medical and scientific information about fasting with the perspective of a patient who has battled obesity the majority of her adult life.

 By now, the low-carb diet's refrain is a familiar one: Bread is bad for you. Fat doesn't matter. Carbs are the real reason you can't lose weight. The low-carb universe Dr. Atkins brought into being continues to expand. Low-carb diets, from South Beach to the Zone and beyond, are still the go-to method for weight-loss for millions. These diets' marketing may differ, but they all share two crucial components: the condemnation of "carbs" and an emphasis on meat and fat for calories. Even the latest diet trend, the Paleo diet, is—despite its increased focus on (some) whole foods—just another variation on the same carbohydrate fears. In *The Low-Carb Fraud*, longtime leader in the nutritional science field T. Colin Campbell (author of *The China Study* and *Whole*) outlines where (and how) the low-carb proponents get it wrong: where the belief that carbohydrates are bad came from, and why it persists despite all the evidence to the contrary. The foods we misleadingly refer to as "carbs" aren't all created equal—and treating them that way has major consequences for our nutritional well-being. If you're considering a low-carb diet, read this e-book first. It will change the way you think about what you eat—and how you should be eating, to lose weight and optimize your health, now and for the long term.

This work is an examination of what makes us fat. In his book *Good Calories, Bad Calories*, the author, an acclaimed science writer argues that certain kinds of carbohydrates, not fats and not simply excess calories, have led to our current obesity epidemic. Now he brings that message to a wider, nonscientific audience. With fresh evidence for his claim, this book makes his critical argument newly accessible. He reveals the bad nutritional science of the last century, none more damaging than the "calories-in, calories-out" model of why we get fat, the good science that has been ignored, especially regarding insulin's regulation of our fat tissue. He also answers key questions: Why are some people thin and others fat? What roles do exercise and genetics play in our weight? What foods should we eat or avoid? Concluding with an easy-to-follow diet, this book is one key to understanding an international epidemic and a guide to improving our own health.

 "Why Low Carb Should Be the Default Approach for Managing and Preventing Metabolic Syndrome

and Other Chronic Diseases. Almost every day it seems a new study is published that shows you are at risk for diabetes, cardiovascular disease, or all-cause mortality due to something you've just eaten for lunch. Many of us no longer know what to eat or who to believe. In the Nutrition Revolution; distinguished biochemist Richard Feinman, PhD, cuts through the noise, explaining the intricacies of nutrition and human metabolism in accessible terms. He lays out the tools you need to navigate the current confusion in the medical literature and its increasingly bizarre reflection in the media. At the same time, The Nutrition Revolution offers an unsparing critique of the nutritional establishment, which continues to demonize fat and refute the benefits of low-carbohydrate and ketogenic diets, all despite decades of evidence to the contrary. Feinman tells the story of the first low-carbohydrate revolution fifteen years ago, how it began, what killed it, and why a second revolution is now reaching a fever pitch. He exposes the backhanded tactics of a regressive nutritional establishment that ignores good data and common sense, and highlights the innovative work of those researchers who have broken rank. Entertaining, informative, and irreverent, Feinman paints a broad picture of the nutrition world: the beauty of the underlying biochemistry; the embarrassing failures of the medical establishment; the preeminence of low-carbohydrate diets for weight loss, diabetes, other metabolic diseases, and even cancer; and what's wrong with the constant reports that common foods represent a threat rather than a source of pleasure. In his mid-twenties, Dave Asprey was a successful Silicon Valley multimillionaire. He also weighed 300 pounds, despite the fact that he was doing what doctors recommended: eating 1,800 calories a day and working out 90 minutes a day, six times a week. When his excess fat started causing brain fog and food cravings sapped his energy and willpower, Asprey turned to the same hacking techniques that made his fortune to "hack" his own biology, investing more than \$300,000 and 15 years to uncover what was hindering his energy, performance, appearance, and happiness. From private brain EEG facilities to remote monasteries in Tibet, through radioactive brain scans, blood chemistry work, nervous system testing, and more, he explored traditional and alternative technologies to reach his physical and mental prime. The result? The Bulletproof Diet, an anti-inflammatory program for hunger-free, rapid weight loss and peak performance. The Bulletproof Diet will challenge—and change—the way you think about weight loss and wellness. You will skip breakfast, stop counting calories, eat high levels of healthy saturated fat, work out and sleep less, and add smart supplements. In doing so, you'll gain energy, build lean muscle, and watch the pounds melt off. By ditching traditional "diet" thinking, Asprey went from being overweight and sick in his twenties to maintaining a 100-pound weight loss, increasing his IQ, and feeling better than ever in his forties. The Bulletproof Diet is your blueprint to a better life.

The innovative guide that reveals how eating more fat—the smart kind—is the key to health, longevity, and permanent weight loss. For years experts have told us that eating fat is bad. But by banning fat from our diets, we've deprived ourselves of considerable health benefits—and have actually sabotaged our own efforts to lose weight. Though they originally came from vastly different schools of thought about diet and weight loss, renowned nutritionist Jonny Bowden and well-respected physician Steven Masley independently came to the same conclusion about why so many people continually fail to shed pounds and get healthy. It all comes back to a distinction far more important than calories vs. carbs or paleo vs. plant-based: smart fat vs. dumb fat. In *Smart Fat*, they explain the amazing properties of healthy fat, including its ability to balance hormones for increased energy and appetite control, and its incredible anti-inflammatory benefits. The solution for slimming down—and keeping the pounds off for life—is to “smart-fat” your meals, incorporating smart fats with fiber, protein, and most importantly, flavor. Bowden and Masley identify smart fats, explain what not to eat, and provide a thirty-day meal plan and fifty recipes based on the magic formula of fat, fiber, protein, and flavor. It's time to unlearn what we think we know about food. Getting smart about fat—and everything you eat—and learning to smart-fat your meals is the only solution you'll ever need.

In this book, Jan Deckers addresses the most crucial question that people must deliberate in relation to how we should treat other animals: whether we should eat animal products. Many people object to the consumption of animal products from the conviction that it inflicts pain, suffering, and death upon animals. This book argues that a convincing ethical theory cannot be based on these important concerns: rather, it must focus on our interest in human health. Tending to this interest demands not only that we extend speciesism—the attribution of special significance to members of our own species merely because they belong to the same species as ourselves—towards nonhuman animals, but also that we safeguard the integrity of nature. In this light, projects that aim to engineer the genetic material of animals to reduce their capacities to feel pain and to suffer are morally suspect. The same applies to projects that aim to develop in-vitro flesh, even if the production of such flesh should be welcomed on other grounds. The theory proposed in this book is accompanied by a political goal, the 'vegan project', which strives for a qualified ban on the consumption of animal products. Deckers also provides empirical evidence that some support for this goal exists already, and his analysis of the views of others—including those of slaughterhouse workers—reveals that the vegan project stands firm in spite of public opposition. Many charges have been pressed against vegan diets, including: that they alienate human beings from nature; that they increase human food security concerns; and that they are unsustainable. Deckers argues that these charges are legitimate in some cases, but that, in many situations, vegan diets are actually superior. For those who remain doubtful, the book also contains an appendix that considers whether vegan diets might actually be nutritionally adequate.

Are you confused by what your cholesterol levels really say about your health? Don't you wish someone could just spell it out in simple, easy-to-understand language and tell you what, if anything, you need to do about your cholesterol? Good news! That's precisely what *Cholesterol Clarity* is designed to do. Jimmy Moore, a prominent and highly respected health blogger and podcaster, has teamed up with Dr. Eric Westman, a practicing internist and nutrition researcher, to bring you one of the most unique books you'll ever read on this subject, featuring exclusive interviews with twenty-nine of the world's top experts from various fields to give you the complete lowdown on cholesterol. If you're worried about any confusing medical jargon in this book, don't be—this critical information is broken down for you to grasp what is really important and what is not. You won't find this kind of comprehensive, cutting-edge, expert-driven cholesterol information all in one place anywhere else. Has your doctor told you your total and/or LDL cholesterol is too high and thus requires you to take immediate action to lower it? Has the solution to your "high cholesterol" been to cut down on your saturated fat intake, eat more "healthy" whole grains and vegetable oils, and possibly even take a prescription medication like a statin to lower it to "desirable" levels? If so, then this is the book for you. Learn what the real deal is from some of the leading experts on the subject. Not only will *Cholesterol Clarity* tell you what your cholesterol tests—LDL, HDL, triglycerides, and other key cholesterol markers—really mean, but it will also arm you with nutritional guidance that will lead you to optimal health. Are you ready to find out what the HDL is wrong with your numbers? Within the pages of this book you'll learn invaluable lessons, including: -Why your LDL-C and total cholesterol numbers may not be as important in determining your health as your doctor may think -The undeniable negative role that chronic inflammation plays in your health -Why cholesterol-lowering statin drugs don't necessarily solve your heart health concerns -Why your doctor should be testing for LDL particles and particle size when measuring cholesterol -Why HDL and triglycerides are far more predictive of health concerns than LDL-C and total cholesterol -Why consuming foods with saturated fat is good for you, and why carbohydrate-based foods can be detrimental to attaining the best cholesterol numbers -Why a growing number of physicians, researchers, and nutritionists believe treating cholesterol numbers is virtually irrelevant Contributing Experts Include: Cassie Bjork, RD Philip Blair, MD Jonny Bowden, PhD John Briffa, BSc, MB, BS Dominic D'Agostino, PhD William Davis, MD Thomas Dayspring, MD David Diamond, PhD Ron Ehrlich, BDS, FACNEM Jeffrey N. Thomas Cowan was a 20-year-old Duke grad—bright, skeptical, and already disillusioned with industrial capitalism—when he joined the Peace Corps in the mid-1970s for a two-year tour in Swaziland. There, he encountered the work of Rudolf Steiner and Weston A. Price—two men whose ideas would fascinate and challenge him for decades to come. Both drawn to the art of healing and repelled by the way medicine was—and continues to be—practiced in the United States, Cowan

returned from Swaziland, went to medical school, and established a practice in New Hampshire and, later, San Francisco. For years, as he raised his three children, suffered the setback of divorce, and struggled with a heart condition, he remained intrigued by the work of Price and Steiner and, in particular, with Steiner's provocative claim that the heart is not a pump. Determined to practice medicine in a way that promoted healing rather than compounded ailments, Cowan dedicated himself to understanding whether Steiner's claim could possibly be true. And if Steiner was correct, what, then, is the heart? What is its true role in the human body? In this deeply personal, rigorous, and riveting account, Dr. Cowan offers up a daring claim: Not only was Steiner correct that the heart is not a pump, but our understanding of heart disease—with its origins in the blood vessels—is completely wrong. And this gross misunderstanding, with its attendant medications and risky surgeries, is the reason heart disease remains the most common cause of death worldwide. In *Human Heart, Cosmic Heart*, Dr. Thomas Cowan presents a new way of understanding the body's most central organ. He offers a new look at what it means to be human and how we can best care for ourselves—and one another.

Heart disease is the #1 killer. However, traditional heart disease protocols—with their emphasis on lowering cholesterol—have it all wrong. Emerging science is showing that cholesterol levels are a poor predictor of heart disease and that standard prescriptions for lowering it, such as ineffective low-fat/high-carb diets and serious, side-effect-causing statin drugs, obscure the real causes of heart disease. Even doctors at leading institutions have been misled for years based on creative reporting of research results from pharmaceutical companies intent on supporting the \$31-billion-a-year cholesterol-lowering drug industry. The Great Cholesterol Myth reveals the real culprits of heart disease, including: - Inflammation - Fibrinogen - Triglycerides - Homocysteine - Belly fat - Triglyceride to HCL ratios - High glycemic levels Bestselling health authors Jonny Bowden, Ph.D., and

Stephen Sinatra, M.D. give readers a 4-part strategy based on the latest studies and clinical findings for effectively preventing, managing, and reversing heart disease, focusing on diet, exercise, supplements, and stress and anger management. Get proven, evidence-based strategies from the experts with *The Great Cholesterol Myth. MYTHS VS. FACTS* Myth-High cholesterol is the cause of heart disease. Fact-Cholesterol is only a minor player in the cascade of inflammation which is a cause of heart disease. Myth-High cholesterol is a predictor of heart attack. Fact-There is no correlation between cholesterol and heart attack. Myth-Lowering cholesterol with statin drugs will prolong your life. Fact-There is no data to show that statins have a significant impact on longevity. Myth-Statin drugs are safe. Fact-Statin drugs can be extremely toxic including causing death. Myth-Statin drugs are useful in men, women and the elderly. Fact-Statin drugs do the best job in middle-aged men with coronary disease. Myth-Statin drugs are useful in middle-aged men with coronary artery disease because of its impact on cholesterol. Fact-Statin drugs reduce inflammation and improve blood viscosity (thinning blood). Statins are extremely helpful in men with low HDL and coronary artery disease. Myth-Saturated fat is dangerous. Fact-Saturated fats are not dangerous. The killer fats are the trans fats from partially hydrogenated oils. Myth-The higher the cholesterol, the shorter the lifespan.
