Fundamentals of Investments was written to: 1. Focus on students as investment managers, giving them information they can act on instead of concentrating on theories and research without the proper context. 2. Offer strong, consistent pedagogy, including a balanced, unified treatment of the main types of financial investments as mirrored in the investment world. 3. Organize topics in a way that makes them easy to apply--whether to a portfolio simulation or to real life--and support these topics with hands-on activities. The approach of this text reflects two central ideas. First, there is a consistent focus on the student as an individual investor or investments manager. Second, a consistent, unified treatment of the four basic types of financial instruments--stocks, bonds, options, and futures--focusing on their characteristics and features, their risks and returns, and the markets in which they trade.

Measuring and Managing the Value of Companies McGraw-Hill Education

Fundamentals of Corporate Finance 8e combines an applied introduction of concepts, with a clear and strong focus on learning outcomes. Based on the principle that students' understanding of corporate finance should be developed in terms of a few integrated and powerful ideas, it has 3 basic themes at its core: 1. An emphasis on intuition: It separates and explains key principles on a common-sense, intuitive level before launching into specifics. The intuitive organisation of chapters also means that traditionally 'more-difficult' topics arise as a natural extension to

the work that has gone before. 2. A unified valuation approach: Net present value (NPV) is treated as the basic concept underlying corporate finance. 3. A managerial focus: It emphasises the role of the financial manager as a decision maker, and the need for managerial input and judgement is stressed. Up-to-date examples and cases in all chapters make the 8th edition a comprehensive manual of applied financial management, covering financial hot topics and focus areas, as well as a historic overview of developments in (and lessons learned from) equity and debt markets. Cases focusing on well-known ANZ and international companies show how recognisable organisations put corporate finance into practice, and how real-world events such as the COVID-19 pandemic affect some of their corporate finance decisions. This new edition is even more flexible than its predecessors, offering flexibility of coverage to unit coordinators in designing their courses.

Corporate Finance, by Ross, Westerfield, and Jaffe is a popular textbook that emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain

corporate finance with a balance of theory and application. The well-respected author team is known for their clear, accessible presentation of material that makes this text an excellent teaching tool. Brad Jordan, known for his successful work on the RWJ Fundamentals and Essentials books, contributed to this edition. His influence will be seen particularly in the writing style with smoother coverage of topics, and the increased quality in the problem material.
