This book exclusively differentiates the differences of assistive, adaptive, remedial and instruction technologies. In addition, it also explains how to avoid over-reliance, and dependence through the principles of use and application of technology in inclusive classroom. The text is organized in two parts. Part I consists of the historical and legal evolution of the use of technology for inclusive education for individual with exceptional needs. Part II describes the needs and characteristics of individual with exceptional needs from high incidence to low incidence population.

The issue of climate change poses a significant challenge to organizations worldwide, affecting the availability and

quality of essential resources such as energy, water, and manpower. This research book emphasizes the urgent need for social and technological innovations to address the negative impact of climate change and transition towards a Net Zero economy. Strategies such as lifestyle alterations, efficient resource utilization, and adoption of clean technologies can assist organizations in dealing with this global concern. Climate Change Management and Social Innovations for Sustainable Global Organization offers a comprehensive examination of the nature and impact of climate change on businesses, including case studies and

strategies for mitigating its effects. The book also assesses the role of frugal innovations, resource utilization patterns, and lifestyles on greenhouse gas emissions, promoting Net-Zero practices. It is a valuable resource for professionals and researchers in the field of climate change and sustainable development, including policy makers, corporate decision makers, environmentalists, and academics. Furthermore, the book can be used as supporting material for undergraduate and master's business students and managers interested in exploring the link between sustainable development and climate change.

Technology ASTM International
Authored by an insider with over 40 years of high energy materials (HEMs) experience in academia, industry and defense organizations, this handbook and ready reference covers all important HEMs from the 1950s to the present with their respective properties and intended purposes. Written at an attainable level for professionals, engineers and technicians alike, the book provides a comprehensive view of the current status and suggests further directions for research and development. An introductory chapter on the chemical and thermodynamic basics allows the reader to

become acquainted with the fundamental features of explosives, before moving on to the important safety aspects in processing, handling, transportation and storage of high energy materials. With its collation of results and formulation strategies hitherto scattered in the literature, this should be on the shelf of every HEM researcher and developer.

Examines teen life in India, including challenges, pastimes, and customs.

Climate Change Management and Social Innovations for Sustainable Global Organization

Capstone
This collection of essays by subject specialists examines the politics of violence,

communalism, and terrorism as negotiated in cinema; the representations of identitarian politics; and the complex ideological underpinnings of literary adaptations. *Electrical & Electronics Abstracts* Routledge
Chinese Remainder Theorem, CRT, is one of the jewels of mathematics. It is a perfect combination of beauty and utility or, in the words of Horace, omne tulit punctum qui miscuit utile dulci. Known already for ages, CRT continues to present itself in new contexts and open vistas for new types of applications. So far, its usefulness has been obvious within the realm of "three C's". Computing was its original field of application, and

continues to be important as regards various aspects of algorithmics and modular computations. Theory of codes and cryptography are two more recent fields of application. This book tells about CRT, its background and philosophy, history, generalizations and, most importantly, its applications. The book is self-contained. This means that no factual knowledge is assumed on the part of the reader. We even provide brief tutorials on relevant subjects, algebra and information theory. However, some mathematical maturity is surely a prerequisite, as our presentation is at an advanced undergraduate or beginning graduate level. We have tried to

make the exposition innovative, many of the individual results being new. We will return to this matter, as well as to the interdependence of the various parts of the book, at the end of the Introduction. A special course about CRT can be based on the book. The individual chapters are largely independent and, consequently, the book can be used as supplementary material for courses in algorithmics, coding theory, cryptography or theory of computing. Of course, the book is also a reference for matters dealing with CRT.

Springer Nature
The Routledge
Encyclopedia of
Translation Technology
provides a state-of-the-
art survey of the field
of computer-assisted
translation. It is the
first definitive
reference to provide a
comprehensive
overview of the
general, regional and
topical aspects of this

increasingly significant area of study. The Encyclopedia is divided into three parts: Part One presents general issues in translation technology, such as its history and development, translator training and various aspects of machine translation, including a valuable case study of its teaching at a major university; Part Two discusses national and regional developments in translation technology, offering contributions covering the crucial territories of China, Canada, France, Hong Kong, Japan, South Africa, Taiwan, the Netherlands and Belgium, the United Kingdom and the United States Part Three evaluates specific matters in translation technology,

with entries focused on subjects such as alignment, bitext, computational lexicography, corpus, editing, online translation, subtitling and technology and translation management systems. The Routledge Encyclopedia of Translation Technology draws on the expertise of over fifty contributors from around the world and an international panel of consultant editors to provide a selection of articles on the most pertinent topics in the discipline. All the articles are self-contained, extensively cross-referenced, and include useful and up-to-date references and information for further reading. It will be an invaluable reference work for anyone with a

professional or academic interest in the subject.

Proceedings of International Conference on Information Technology and Applications CRC Press

This book reviews ways to improve statistical machine speech translation between Polish and English. Research has been conducted mostly on dictionary-based, rule-based, and syntax-based, machine translation techniques. Most popular methodologies and tools are not well-suited for the Polish language and therefore require adaptation, and language resources are lacking in parallel and monolingual data. The main objective of this volume to develop an

automatic and robust Polish-to-English translation system to meet specific translation requirements and to develop bilingual textual resources by mining comparable corpora.

Stochastic Models In Engineering, Technology And Management - Proceedings Of The Australia-japan Workshop Kailash Verlag

This proceedings volume explores the disruptive effect of COVID19 pandemic on business leaders and managers. It covers the sweeping changes experienced by all sectors of work and business along with core functional verticals. As organizations institutionalize lessons

learned through trial and error, an effort is required to document these efforts. The volume is an amalgamation of papers presented at the International Management Conference, 2021 hosted at KIIT University, India in February 2021. The thrust of this conference was to gather a holistic picture of the lessons derived during the pandemic hardship. Selected papers provide readers with an idea of the new normal in various domains of management across industries and organizations. Research papers, from each functional areas of business management, give

focus on experiences and best practices. *International Polymer Science and Technology* IGI Global This book includes high-quality papers presented at 16th International Conference on Information Technology and Applications (ICITA 2022), held in Lisbon, Portugal during October 2022, 2022. The book presents original research work of academics and industry professionals to exchange their knowledge of the state-of-the-art research and development in information technology and applications. The topics covered in the book are cloud computing, business process engineering, machine learning, evolutionary

computing, big data analytics, Internet of things and cyber-physical systems, information and knowledge management, computer vision and image processing, computer graphics and gamesprogramming, mobile computing, ontology engineering, software and systems modeling, humancomputer interaction, online learning/ e-learning, computer networks, and web engineering.

In 2011 the Philippines surpassed India to become what the New York Times referred to as "the world's capital of call centers." By the end of 2015 the Philippine call center industry employed over one million people and generated twenty-two billion dollars in revenue. In *A Nation on the Line* Jan M. Padios examines this massive industry in the context of globalization, race, gender, transnationalism, and

postcolonialism, outlining how it has become a significant site of efforts to redefine Filipino identity and culture, the Philippine nation-state, and the value of Filipino labor. She also chronicles the many contradictory effects of call center work on Filipino identity, family, consumer culture, and sexual politics. As Padios demonstrates, the critical question of call centers does not merely expose the logic of transnational capitalism and the legacies of colonialism; it also problematizes the process of nation-building and peoplehood in the early twenty-first century.
