For example, spaces of spinor-

valued functions on the sphere are spaces of the so-called spherical monogenics. They are spinor-valued polynomial solutions of the Dirac equations on \mathbb{R}^n , $n \geq 3$. The Clifford algebra-valued fields and other examples are studied in [1, 2, 3, 4]. In this paper, we give a new approach to analyze the Clifford algebra-valued or the exterior algebra-valued fields on the sphere. Spinor-valued and Clifford algebra-valued harmonic ...  The Clifford algebra is an associative algebra that can be constructed from Euclidean space and its inner product in a basis-independent way. Both the spin group and its Lie algebra are embedded inside the Clifford algebra in a natural way, and in applications the Clifford algebra is often the easiest to work with.

 Spin and Clifford algebras, an introduction
 In mathematics, a Clifford algebra is an algebra generated by a vector space with a quadratic form, and is a unital associative algebra. As K-algebras, they generalize the real numbers, complex numbers, quaternions and several other hypercomplex number systems. The theory of Clifford algebras is intimately connected with the theory of quadratic forms and orthogonal transformations.
