This innovative text presents a comprehensive review of the theoretical and empirical support for a wellness approach to counseling with current techniques for client assessment, case conceptualization, treatment planning, and intervention. The authors provide holistic strategies for wellness promotion with children, adolescents, and young, midlife, and older adults, as well as in counseling with groups, couples, and families. Each chapter includes reflection questions, learning activities, and resources to deepen readers' understanding of the content and application to practice. Wellness boosters

offer quick methods for clients and counselors to increase their domain-specific and overall well-being. In addition, experienced counselors share their personal experiences implementing wellness interventions in "Practitioner Spotlight" vignettes. A chapter on counselor self-care completes the book. Jonathan H. Ohrt, PhD, is an associate professor and counselor education program coordinator at the University of South Carolina. Philip B. Clarke, PhD, is an associate professor in the Department of Counseling at Wake Forest University. Abigail H. Conley, PhD, is an assistant professor in the Department of Counseling and Special Education, and an affiliate faculty member in the Institute for Women's Health, at Virginia Commonwealth University. *Requests for digital versions from the ACA can be found on wiley.com. *To request print copies, please visit the ACA website.

Career Counseling: A Holistic Approach

In this book Total Quality Management is introduced as a holistic management concept. An instrument to measure this approach is the European Model for Business Excellence which is well known in many European countries for national quality prizes. The book explains this model in great detail and shows how to implement it in an organisational development process. A description of the most relevant management tools in this context, like self-assessment, policy

deployment and benchmarking, will be of particular interest to the reader. The book combines in a unique way the theoretical background of the subject with practical experience in consulting. The reader will understand the necessity of holistic approaches and will learn how the European Business Excellence Model overcomes traditional ways of measuring business results.

This book introduces a holistic approach to ship design and its optimisation for life-cycle operation. It deals with the scientific background of the adopted approach and the associated synthesis model, which follows modern computer aided engineering (CAE) procedures. It integrates techno-economic databases, calculation and multi-objective optimisation modules and s/w tools with a well-established Computer-Aided Design (CAD) platform, along with a Virtual Vessel Framework (VVF), which will allow virtual testing before the building phase of a new vessel. The resulting graphic user interface (GUI) and information exchange systems enable the exploration of the huge design space to a much larger extent and in less time than is currently possible, thus leading to new insights and promising new design alternatives. The book not only covers the various stages of the design of the main ship system, but also addresses relevant major onboard systems/components in terms of life-cycle performance to offer readers a better understanding of suitable outfitting details, which is a key aspect when it comes the outfitting-intensive products of international shipyards. The book disseminates results of the EU funded Horizon 2020 project HOLISHIP.

An Introduction Alasdair Gilchrist
DASFAA is an annual international database conference, located in the Asia-Pacific region, which showcases state-of-the-art R & D activities in databases, terms and their applications. It provides a forum for technical presentations and discussions among database researchers, developers and users from academia, business and industry. DASFAA 2009, the 14th in the series, was held during April 20-23, 2009 in Brisbane, Australia. In this year, we carefully selected six workshops, each focusing on specific research issues that contribute to the main themes of the DASFAA conference.

This volume contains the final versions of papers accepted for these six workshops that were held in conjunction with DASFAA 2009. They are: – First International Workshop on Benchmarking of XML and Semantic Web

Applications (BenchmarkX 2009) – Second International Workshop on Managing Data Quality in Collaborative Information Systems (MCIS 2009) – First International Workshop on Data and Process Provenance (WDPP 2009) – First International Workshop on Privacy-Preserving Data Analysis (PPDA 2009) – First International Workshop on Mobile Business Collaboration (MBC 2009) – DASFAA 2009 PhD Workshop All the workshops were selected via a public call-for-proposals process. The workshop organizers put a tremendous amount of effort into soliciting and - lecting papers with a balance of high quality, new ideas and new applications. We asked all workshops to follow a rigid paper selection process, including the procedure to ensure that any Program Committee members are excluded from the paper review process of any paper they are involved with. A requirement about the overall paper acceptance rate of no more than 50% was also imposed on all the workshops.

This book develops a general theory of managerial decision making on the basis of a few elementary postulates. It employs logic as the method of reasoning, systems science in general and the systemic YoYo Model in particular, as the intuitive playground. By doing so, the authors take individually background-based guesswork out of processes of decision making. All established conclusions are expected to be generally employable in real-life applications. At the same time, the book is user friendly to a wide range of audience, coincides with people's intuition, and provides applicable results and insights for practical purposes.

The mental health needs of older people are all too often overlooked or put down to the inevitable consequences of ageing. This textbook will make it much easier for health, social care and third sector workers to identify, treat and support the needs of this population. The book takes an interdisciplinary team approach and sets the scene by looking at different practice contexts in the United Kingdom and the increasingly important role played by social care in addressing the mental health needs of older people. A number of more clinically focused chapters then cover: mental health promotion anxiety and depression ageing and psychosis alcohol and dual diagnosis dementia later life liaison services complex and enduring mood disorders. Each clinical chapter makes use of extended and detailed case

studies which illuminate the team's role in the assessment-intervention-evaluation cycle and ensure the text's application to practice. Service user and family perspectives are drawn on throughout and current practice exemplars outlined. The final chapter distils key messages from the book and sets a number of key challenges. Mental Health and Later Life highlights the rewards and complexity of working with older people with mental health needs and their families. Law of attracting, or what I refer to as character manifestation, is the standard by which you draw into your life that which is in vibrational alignment with your awareness; your thoughts, feelings, opinions and attitudes, whether you're mindful of them or not. This is why the starting point on the road to successfully and deliberately manifesting your desires is to become aware of the thoughts and feelings that are producing your experience and to take responsibility for your reality. The Tidal Model BoD – Books on Demand
Contemporary research supports the importance of spirituality for mental health. Counselors, social workers, psychologists and other therapists wonder how to include spirituality in treatment. Mental health training and current treatment models do not equip clinicians to adequately address the topic of spirituality. The Integrated Self presents a model for identifying and assessing spirituality within the client's own life and experience. By operationally defining spirituality as a dimension of the client's experience, The Integrated Self explores the role of culture, values, beliefs, and lifestyle for understanding the spiritual dimension of the person. Using case studies, clinicians learn how to implement the model of the integrated self within their existing theoretical orientation. The Integrated Self also includes discussions on the approaches for spiritual assessment and ethical issues related incorporating spirituality in mental health treatment. While other books focus on religious beliefs, spiritual practices, or formulations of a general kind of spirituality, The Integrated Self provides a model for a holistic approach that can be adapted in both mental health and health care settings.

The book presents a holistic approach to organization performance improvements by lessons learned management. Such an approach is required because specific methods, such as debriefing, task management or procedures updates, do not achieve actual improvements. The presented model spans the entire life cycle of lessons learned: Starting from creating new lessons, moving on to knowledge refining and ending with smart integration into the organizational environment so future re-use of knowledge is enabled. The model also addresses other sources of organizational learning including quality processes and employee experience utilization.

We revive in this paper the empirical relevance of the competitive storage model by taking a holistic approach to food commodity prices. We augment the seminal Deaton and Laroque (1992, 1996)

model by incorporating more comprehensive and realistic supply and demand factors: output and demand trends, shocks to the yield, and time-varying interest rates. While the computational burden increases exponentially, the augmented model succeeds in replicating all four key patterns of food commodity prices. Our simulation and comparative statics also show that (i) the long-run declining trend of food prices may come to a halt or even reverse due to the shifting balance between supply and demand; (ii) short-run price fluctuations are mainly attributable to sizeable, though low-probability, shocks to output such as inclement weather; and (iii) the impact of monetary policy, though small in normal times, is nonlinear and asymmetric, and can become large if the real rate passes a certain threshold.

How can intra-organisational knowledge sharing be analysed and actualised? What should organisations be aware of before implementing knowledge management and sharing programmes? The overall objective of this book is neither to give precise answers nor to propose an exact action plan, but rather to discuss the phenomena of intra-organisational knowledge sharing in its 'complexity', shifting from a one-sided to a holistic view. The holistic approach relates to the contradictive reality of current knowledge management and knowledge sharing activities within organisations, taking up the challenge of analysing the internal process of knowledge sharing from three perspectives: social, economic and cultural. This methodical approach is a kind of 're-construction and re-combination', i.e. analysing and reflecting on existing literature sources, allocating them into theoretical perspectives, studying them comprehensively and synthesising them in a holistic model. The diversity of such perspectives as economic, social and cultural undogmatically widens the debate across disciplines. The main result of this research is the developed holistic model for knowledge sharing within organisations, which reproduces a general guiding framework for organisations, enabling them to analyse and question their knowledge sharing process and structure.
