Calculus with Analytic Geometry John Wiley & Sons

This well-received book is a market leader in the field of Microeconomics, and demonstrates how microeconomics can be used as a tool for both managerial and public-policy decision making. Clear writing style and graphs compliment the integrated use of current, real world industry examples throughout the book. It emphasizes relevance and application to cover modern topics—such as Game Theory and economics of information—and examples—such as United States v. Microsoft, pricing cellular phone service, and Internet auctions. Coverage of other up-to-date issues includes supply and demand, cost, consumer behavior, individual and market demand, market failure, and the role of government. For individuals with an interest in economics, microeconomic theory, and price theory.

Las universidades europeas han experimentado un cambio trascendental debido a la implantación del Espacio Europeo de Educación Superior (EEES) y el compromiso de impulsar desde las universidades el Espacio Europeo de Investigación. El Programa "Campus de Excelencia Internacional. (CEI),

promovido por la Secretaría General de Universidades del Ministerio de Educación, es uno de los ejes estructurales de modernización de las Universidades en España. En este contexto esta obra pretende alcanzar tres metas: Permanecer como testigo editorial de la inédita movilización positiva hacia una reestructuración de las Universidades españolas en 2009, instar a la continuidad del Programa ministerial, y difundir internacionalmente el patrimonio urbanístico y arquitectónico de las Universidades españolas. El autor aporta una lectura completa y comprometidamente transversal de la Universidad española, interpretándola subjetivamente bajo la mirada del arquitecto que en dos décadas ha analizado tanto la dimensión tipológica de los recintos académicos, como la planificación de espacios educativos de nueva planta, generando conceptos originales, como el "Campus Didáctico".

Refrigeration Principles and Systems W. W. Norton & Company

Process flowsheeting concerns the use of computers to stimulate and design chemical plant of all types, such as petroleum refineries, petrochemical complexes or even food factories. In this 1979 introduction to the topic the authors examine the role of flowsheeting in process plant design and look at the various techniques on which computer-aided systems may be based. For each one of these approaches the advantages and disadvantages are clearly stated and the four most important methods are described in detail. In each case the motivation for its development is analysed and its use is illustrated by a number of practical examples. Particular attention is devoted to the underlying technology of process flowsheeting systems, and an introduction to the analysis of degrees of freedom in flowsheeting and a guide to further reading are also included. This book will still hold value for those interested in the historical development of process flowsheeting.

What We Cannot Know Fourth Estate

Science is king. Every week, headlines announce new breakthroughs in our understanding of the universe, new technologies that will transform our environment, new medical advances that will extend our lives. Science is giving us unprecedented insight into some of the big questions that have challenged humanity ever since we've been able to formulate those questions. Where did we come from? What is the ultimate destiny of the universe? What are the building blocks of the physical world? What is consciousness? This book asks us to rein in this unbridled enthusiasm for the power of science. Marcus du Sautoy explores the limits of human knowledge, to probe whether there is anything we truly cannot know

The Ages of Gaia Routledge

A thorough introduction to balance equation concepts. Geared for the course offered to chemical engineering majors in their sophomore year.

Develops a framework for the analysis of flowsheet problem information with extensive use of degree-of-freedom analysis. Presents systematic approaches for manual and computer-aided solution of full scale balance problems. Provides a detailed development of the structure, properties, and interrelationships of species and element balances based on the algebraic view of reaction-stoichiometry and the rate of reaction concept.

Managers face an infinite range of situations and problems that involve bringing materials and information together to produce and deliver goods and services to customers. In Hopps solid, practical introduction to manufacturing and supply chain dynamics, managers learn how to use the scientific approach to understand why systems behave the way they do as an effective way to deal with almost any scenario they may face. Written in a reader-friendly style, the text includes useful examples from manufacturers as well as service providers, presents the key concepts that underlie the behavior of operations systems in a largely non-mathematical way, contains illustrations and analogies to everyday life, links theory to practice, and reinforces the learning process with end-of-chapter Questions for Thought.
