In recent years, however, there has been a lack of breakthroughs in therapeutic advances. By challenging many established beliefs, Cancer explores these issues by offering new perspectives on the study of cancer and exploring the areas of mathematics, physics and chemistry in cancer research. This book is for cancer specialists, clinicians, and researchers interested in an innovative

view in cancer research.

This textbook takes a unique approach by linking the elements of anatomy and physiology (A&P) with everyday activities we all do without thinking, the 'Activities of Daily Living' such as breathing or eating, in order to explain biological systems and making complex ideas and biological processes easier to understand and relate to practice. By connecting A&P with health, healthcare and wellbeing, the author's exceptional understanding of students' needs contributes to a comprehensive book. As an essential anatomy and physiology textbook that uses accessible language, everyday examples, and connects to your course, this is the ultimate companion to any student. Whether you're studying nursing, health, midwifery, paramedic science, or sport and exercise, this introductory text will offer a head start.

Formal Ontology in Information Systems (FOIS) is the flagship conference of the International Association for Ontology and its Applications (IAOA). Its interdisciplinary research focus lies at the intersection of philosophical ontology, linguistics, logic, cognitive science, and computer science, as well as in the applications of ontological analysis to conceptual modeling, knowledge engineering, knowledge management, information-systems development, library and information science, scientific research, and semantic technologies in general. As in previous years, FOIS 2014 was a nexus of interdisciplinary research and communication. The current proceedings is divided into four main sections, dealing with: foundations; processes, agency and dispositions; methods and tools; and applications. The last of these covers a broad spectrum of areas, including in particular biology and medicine, engineering, and economy. For the first time in its history, the conference hosted a special track: an ontology competition, the aim of which was to encourage authors to make their ontologies publicly available and to allow them to be evaluated according to a set of predetermined criteria. Papers discussing these ontologies can also be found in this volume. The book will be of interest to all those whose work involves the application of ontologies, and who are looking for a current overview of developments in formal ontology.
