Heads up - it's the twenty-first century! It's easier than ever to make your own gadgets. The Arduino is a hardware and software package that allows you to create your own gadgets from scratch. It's essentially a microcomputer that you can hook all sorts of neat things up to and that you can make full-fledged projects out of. Programming your Arduino projects isn't terribly difficult, but there are a lot of underlying concepts that you need to grasp if you really want to propel yourself forward as a programmer. You're going to be working with pretty low-level concepts, so it's important that you familiarize yourself with all of these before you jump into Arduino programming.

Rather than yet another project-based workbook, *Arduino: A Technical Reference* is a reference and handbook that thoroughly describes the electrical and performance aspects of an Arduino board and its software. This book brings together in one place all the information you need to get something done with Arduino. It will save you from endless web searches and digging through translations of datasheets or notes in project-based texts to find the information that corresponds to your own particular setup and question. Reference features include pinout diagrams, a discussion of the AVR microcontrollers used with Arduino boards, a look under the hood at the firmware and run-time libraries that make the Arduino unique, and extensive coverage of the various shields and add-on sensors that can be used with an Arduino. One chapter is devoted to creating a new shield from scratch. The book wraps up with detailed descriptions of three different projects: a programmable signal generator, a "smart" thermostat, and a programmable launch sequencer for model rockets. Each project highlights one or more topics that can be applied to other applications.

This changed a few things that have caused two of the sketches in this book to break. The change that has caused trouble is that the classes 'Server' and 'Client' have been renamed to 'EthernetServer' and 'EthernetClient' respectively. To fix this: Edit sketches 10-01 and 10-02 to replace all occurrences of the word 'Server' with 'EthernetServer' and all occurrences of 'Client' with 'EthernetClient'.
