Washington is alive with geologic activity: It's home to the most active volcanoes in the lower 48, earthquakes regularly rattle the populated Puget Sound region, the potential of landslides increases with each soaking rain, and tsunami evacuation routes alert tourists in Olympic National Park to the active plate boundary just off the coast. The only geologic hazard Washingtonians need not fear, at least not with the continued trend of global warming, is another Ice Age flood. More than forty of the biggest floods known in the history of Earth scoured the Channeled Scabland of eastern Washington, the most recent only about 15,000 years ago. Since the first edition of *Roadside Geology of Washington* appeared on the book shelves in 1984, several generations of geologists have studied the wild assortment of rocks in the Evergreen State, from 45-million-year-old sandstone exposed in sea cliffs at Cape Flattery to 1.4-billion-year-old sandstone near Spokane. In between are the rugged granitic and metamorphic peaks of the North Cascades, the volcanic flows of Mt. Rainier and the other active volcanoes of the Cascade magmatic arc, and the 2-mile-thick flood basalts of the Columbia Basin. With the help of this brand new, completely

updated second edition, you can appreciate spectacular geologic features along more than forty of Washington's highways.

Modern Rockhounding and Prospecting Handbook Rowman & Littlefield

The largest and one of the most fascinating counties in the state. Here the footloose and curious may wander past long forgotten towns and abandoned town sites with colourful names, or range through the sweeping desert lands into the remote high country. There is much to hold the passer by; legends of hidden gold and long lost mines, several of them still searched for by close-mouthed treasure hunters and others intrigued by the age old quest for gold. And some of those historic towns of yesterday, places like Wauconda, Nighthawk and old Molson, still stand, silent monuments to the past and little changed in almost a hundred years. Walk through the brooding recesses of McLaughlin's Canyon and along the banks of rivers with lyrical Indian manes, and you still stalk the West of the 19th Century -- and THAT'S Okanogan County.
