The purpose of this book is to provide a firm basis for psychologists to understand the appropriate uses and limitations of popular clinical assessment measures as they are applied to forensic issues. The instruments were selected because of their wide use and importance in both clinical and forensic settings. The PCL-R,

the PAI, and MCMI-II, for example, are typically used with adults in criminal evaluations; the MMPI-A is often used in evaluating adolescents in detention and correctional facilities; while the Child Behavior Checklist (CBCL) (Achenbach, 1991), Personality Inventory for Children--Second Edition (PIC-2) (Lachar & Gruber, 2001), and Parenting Stress Index (PSI) (Abidin, 1995) are more commonly used in evaluating families involved in child protection and custody cases. Instruments such as the MMPI-2, the Rorschach, and the Halstead-Reitan Neuropsychological Battery are widely used across many types

of forensic evaluations, although the latter category of testing is particularly related to personal injury evaluations. The end result is a unique and indispensable reference: a comprehensive overview, within a single text, of prominent clinical assessment instruments widely used for forensic purposes and designed to facilitate the optimal use of clinical assessment instruments among psychologists who have undertaken the training necessary to understand and apply psychological principles and test findings to salient legal standards or issues.

Detection of Malingering during Head Injury Litigation Lippincott Williams & Wilkins

With the growth of threats and violence in higher education settings, college campuses are increasingly expected to have systems in place to identify potentially aggressive individuals and intervene to ensure the safety of the campus population. This book will be useful for student affairs professionals as well as college counselors, psychologists, social workers interested in the practical management of aggression and violence on a college campus. It will also be a valuable resource for those involved in creating and running behavioral intervention teams and threat/risk assessment teams. Ten case studies from both the community and residential college settings provide a comprehensive overview of campus violence and how to intervene to prevent it. Pertinent background information is discussed as an introduction to these narratives, such as the fundamentals of aggression and violence on campuses; how these behaviors can impact students, faculty, and staff; and what can be learned from

past campus violence. Along with discussion questions and a review of ways to approach each situation, experts in higher education, forensic risk assessment, law enforcement, and legal issues weigh in on each case study. Their perspectives offer a context and broad base of opinions and ideas on how each case could be handled. Additional examples for further training of the college counselor are given through a detailed look at almost 100 incidents of violence, including thwarted attacks, rampage shootings, and hostage situations. *The Concise Corsini Encyclopedia of Psychology and Behavioral Science* Routledge

Written by a foremost expert in the field, this hands-on, evidence-based guide describes how to conduct a comprehensive forensic neuropsychological evaluation and provide expert testimony. All steps are covered--from selecting, scoring, and interpreting tests to writing reports and responding to cross-examination--with special attention to assessing noncredible performance. The book identifies seven common flaws of forensic neuropsychological reports and

shows how to avoid them. Excerpts from testimony transcripts illustrate ways neuropsychologists can protect their reports from attack. Also featured are case illustrations and a sample report.

In a managed care era, the MMPI-2 is becoming an overloaded workhorse, required to generate more and more of the assessments that a battery of instruments once did. Though all now rely on the MMPI-2 for good reasons, and the MMPI has fallen out of use entirely, some important and clinically useful scales were lost in the transition. Edward Gotts and Thomas Knudsen have recovered these scales and integrated them with all the standard MMPI-2 scales, the recently published Restructured Clinical Scales, and a number of scales they have constructed to assess positive strengths and coping abilities, and response consistency-inconsistency. This book lays out their new Content Cluster interpretive approach.

Drawing on data from a large psychiatric inpatient sample, they present item composition, reliability, and validity information for each recovered and new scale, and convincingly demonstrate that their new Content Cluster approach results in improved prediction and interpretive power. They also show how to conjoin Rorschach and MMPI-2 results in more effective assessment strategies, and how to tie MMPI-2 results to specific DSM-IV criteria. The Clinical Interpretation of the MMPI-2: A Content Cluster Approach offers psychologists essential new tools for clinical and personality assessment. Substance abuse counseling has gone beyond being viewed as optional training; instead it is fast becoming an essential part of the education of helping professionals. In this book, Dr. Gerald Juhnke presents an innovative, practical model to be used in the assessment and diagnosing of substance abuse and related co-morbid disorders. Substance Abuse Assessment and Diagnosis includes practical "nuts and bolts" direction on how to facilitate a thorough, multi-tiered

substance abuse assessment. This book uniquely incorporates detailed examples of how to use individual and significant other clinical interviews, including the CAGE, SUBSTANCE -Q, etc, standardized specialty instruments, drug detection types, and personality instruments to accomplish this feat. This is the only book of its kind that provides practical detail on how to use and score these varied assessment instruments-including the newest "cornerstone instruments," the MMPI-2, the SASSI-3 and the recently released SASSI-A2. Students and practitioners alike will benefit from this comprehensive volume on the assessment and diagnosis of substance abuse. [Clinical Neuropsychology Study Guide and Board Review](#) Routledge

"This book deals with the forensic application of the MMPI, has been written by experts in the various areas covered, and reviews the whole field critically. The book covers areas such as competency to stand trial, criminal responsibility, injury litigation, child custody evaluation, neuropsychological evaluation, and risk assessment. Several writers include case illustrations in their surveys. The book can

be used as a general reference book in what is becoming a new speciality that is rapidly growing, and clinicians and practitioners will undoubtedly find it interesting and illuminating. Its greatest usefulness may lie in . . . detection of response bias, an ever-present problem in forensic affairs." --H. J. Eysenck in The European Journal of Psychological Assessment "This is an excellent book, which provides the reader with great insight into the varied forensic applications of the MMPI-2. The strengths and limitations of the instrument in different applications are discussed. The chapters are of consistently high quality and are written by eminent researchers. The authors show that the MMPI-2 provides a sound instrument which can be used in the assessment of a variety of legal issues, but like all psychological instruments it has its limitations and should only be used in conjunction with other forms of assessment and background information. The book shows very clearly how widely used the MMPI-2 has become in forensic applications." --Gisle H. Gudjonsson in Personality & Individual Differences Many of the leading North American scholars on

the forensic applications of the MMPI-2 join forces in this carefully edited volume to examine and integrate research and practice on the most widely used psychological test in forensic psychology. Valuable chapters investigate the psychological and legal bases of forensic psychological assessment in general and use of the MMPI-2 in particular in a variety of specific forensic applications involving criminal and civil proceedings. The contributors delve into topics, including the use of the MMPI-2 in the assessment of criminal responsibility, in correctional settings, in neuropsychological evaluations, in computer-based evaluations, in child custody evaluations, and more. In light of the recent revision and publication of the MMPI-2 as well as the growing involvement of psychologists in criminal and civil legal proceedings, *Forensic Applications of the MMPI-2* provides substantial information to many professionals and scholars who use this vital assessment tool. This volume is an excellent resource for clinical and legal practitioners who wish to keep abreast of state-of-the-art forensic psychological assessment, and is of particular interest to

researchers and advanced students in forensic psychology, psychological assessment, criminology, and clinical/counseling psychology, and social work.

A Compendium of Neuropsychological Tests Guilford Press

Oxford Handbooks offer authoritative and up-to-date reviews of original research in a

particular subject area. Specially commissioned chapters from leading figures in the discipline give critical examinations of the progress and direction of debates, as well as a foundation for future research. Oxford Handbooks provide scholars and graduate students with compelling new perspectives upon a wide range of subjects in the humanities, social sciences, and sciences. As one of psychology's oldest fields, personality assessment is one of the most extensively studied subsets of contemporary psychology. The *Oxford Handbook of Personality Assessment* synthesizes new and existing literature with clinical practice to provide a comprehensive volume on contemporary personality assessment, including its historical developments, underlying methods, applications, contemporary issues, and assessment techniques. This handbook, part of the Oxford Library of Psychology, addresses both the historical roots of personality assessment and the evolution of its contemporary methodological tenets, thus providing a foundation for the handbook's other innovative focus: the application of personality assessment in

clinical, personnel, and forensic assessments. With a wealth of respected international contributors and unequalled breadth of content, the Oxford Handbook of Personality Assessment offers an authoritative and field-encompassing resource for researchers and clinicians from across the medical health and psychology disciplines (i.e., clinical psychology, psychiatry, and social work) and would be an ideal text for any graduate course on the topic of personality assessment.

"It is one matter to forget things when you have a million thoughts flooding your mind and quite another to forget when your head is as empty as a looted store." -from Remind Me Why I'm Here In the spring of 1996, Diana Lund was a top-ranked project manager in her mid-thirties when a car accident instantly changed her personality and her life's direction. Thrust into short-term memory loss and cognitive deficit, self-perception kept colliding into reality. Neurologists underestimated her difficulties; they sent her back to work, to manage multi-million dollar contracts, in a

mentally compromised state. Beyond an account of devastating internal transformation, *Remind Me* delves into neurological research and trends. Lund pushes her intellect to its limit to unravel mysteries about her brain and accident. And on her quest to become whole again and to understand the neurological world, she discovers hope. "A topic that could be dense and heavy becomes a page turner. Even sophisticated professionals can relate to the freshness of observations . . ." -Leonard Diller, PhD, Prof. of Rehabilitation Medicine, NYU School of Medicine; Director of Psychology, Rusk Institute of Rehabilitation Medicine "A superbly written volume . . . illustrating . . . that even so-called minor brain injuries can produce functionally incapacitating cognitive and neurobehavioral impairments . . ." -Yehuda Ben-Yishay, PhD, Prof. of Clinical Rehabilitation Medicine, NYU "Essential reading for clinicians, families, and counselors." - Marilyn Lash, MSW, Partner, Lash and Associates Publishing/Training, Inc.
