The Junior Novelisation Ballantine Books
Michael Crichton, the #1 New York Times bestselling author of *Jurassic Park*, returns to the world of paleontology in this recently discovered novel—a thrilling adventure set in the Wild West during the golden age of fossil hunting. The year is 1876. Warring Indian tribes still populate America's western territories even as lawless gold-rush towns begin to mark the landscape. In much of the country it is still illegal to espouse evolution. Against this backdrop two monomaniacal paleontologists pillage the Wild West, hunting for dinosaur fossils, while surveilling, deceiving and sabotaging each other in a rivalry that will come to be known as the Bone Wars. Into this treacherous territory plunges the arrogant and entitled William Johnson, a Yale student with more privilege than sense. Determined to survive a summer in the west to win a bet against his arch-rival, William has joined world-renowned paleontologist Othniel Charles Marsh on his latest expedition. But when the paranoid and secretive Marsh becomes convinced that William is spying for his nemesis, Edwin Drinker Cope, he abandons him in Cheyenne, Wyoming, a locus of crime and vice. William is forced to join forces with Cope and soon stumbles upon a discovery of historic proportions. With this extraordinary treasure, however, comes exceptional danger, and William's newfound resilience will be tested in his struggle to protect his cache, which pits him against

some of the West's most notorious characters. A page-turner that draws on both meticulously researched history and an exuberant imagination, *Dragon Teeth* is based on the rivalry between real-life paleontologists Cope and Marsh; in *William Johnson* readers will find an inspiring hero only Michael Crichton could have imagined. Perfectly paced and brilliantly plotted, this enormously winning adventure is destined to become another Crichton classic.

The Andromeda Strain Bantam

Genetic World will take you on a suspense-filled tour to incredible real-world locations, and introduce you to amazing history and scientific advancements where facts are indeed stranger than fiction. The novel is reminiscent of the religious intrigue in Dan Brown's The Da Vinci Code . . . and the high concept science-driven suspense in Michael Crichton's Jurassic Park and West World. When an Oxford professor and New York Times reporter are invited to a press conference and presentation by two billionaire brothers, they are soon swept into the bizarre world surrounding their creation of Genetic World, the most advanced

theme park and science R&D center in the world. As they sort through a series of clues which lead them on a high-stakes whirlwind trip to Jerusalem, Florence, Rome, and Paris, they discover a major conspiracy and a discovery that could change history. They soon realize that the founders have conflicting objectives for Genetic World. One brother is intent on creating an educational and entertainment park that rivals Disney World and all other amusement parks-including fictional theme parks such as Jurassic Park and West World. The other brother has been involved in activities that push the boundaries of ethics and science, and his actions have led to the theft of historic art and relics. Todd Easterling is a novelist and has worked with HBO, Disney, and other companies in the entertainment and technology sector-the highlight being the reception of a group Emmy from the Academy of Television Arts and Sciences. He has a special interest in the way a novel can change the way we think and ultimately the world we live in. Todd was discovered by the Pinder-Lane Garon-Brooke Literary Agency, of John Grisham fame. He resides in San Diego California and has three daughters.

Micro Simon and Schuster
From the author of Jurassic Park, Timeline, and Congo comes a psychological thriller about a group of scientists who investigate a spaceship discovered on the ocean floor. In the middle of the South Pacific, a thousand feet below the surface, a huge vessel is unearthed. Rushed to the scene is a team of American scientists who descend together into the depths to investigate the astonishing discovery. What they find defies their imaginations and mocks their attempts at logical explanation. It is a spaceship, but apparently it is undamaged by its fall from the sky. And, most startling, it appears to be at least three hundred years old, containing a terrifying and destructive force that must be controlled at all costs.

Greek Myths & Tales Harper Collins
Twenty-one philosophers join forces to investigate the implications of the Jurassic Park franchise for our lives, our values, and our future. Human beings live and thrive by modifying nature, but when do the risks of changing nature outweigh the likely benefits? If it's true that "Life will find a way," should we view any modified or newly reconstituted life as a hazard? The new scientific information we could gain by bringing back T. Rex or other dinosaurs is immense, including greater understanding of biology leading to immeasurable medical benefits, but should we choose to let sleeping dinosaurs lie? And if we do bring them back by reconstituting them from ancient DNA, are they really what they were, or is something missing? If life will find a way, then why isn't the Dodo still around? How close are we, as a matter of fact, to achieving Jurassic Park? Are we really likely to see reconstituted dinosaurs or other ancient species in the near future? How do the different forces—human curiosity, profitability, and philanthropy—interact to determine what actually happens in such cases? What moral standards should be applied to those who try to bring back lost worlds? If velociraptors could talk, what would they tell us? The idea of bringing back the dead and the powerful is not limited to biological species. It also applies to bringing back old gods, old philosophies, old institutions, and old myths. If revived and once again let loose to walk the Earth, these too may turn out to be more dangerous than we bargained for.

Congo Simon and Schuster
