(SSR) is a radar system used in air traffic control, that unlike primary radar systems that measure the bearing and distance of targets using the detected reflections of radio signals, relies on targets equipped with a radar transponder, that reply to each interrogation signal by transmitting encoded data such as an identity code, the aircraft's altitude and further information depending on its chosen mode. SSR is based on the military identification friend or foe teSecondary surveillance radar - WikipediaThis document is part of the European Secondary Surveillance Radar (SSR) Code Management Plan. It has been established to provide States in the ICAO EUR Region with the means to coordinate the use of the SSR codes

based on the principles of the Originating Region Code Assignment Method (ORCAM) and enhanced ORCAM (eORCAM), which provide for the most efficient and economical use of codes. Secondary Surveillance Radar Code Allocation List for the ... 1.1.1 This chapter provides an overview to the implementation of an European Mode S ground station. 1.1.2 Europe currently operates Secondary Surveillance Radar (SSR) stations for the surveillance function. These stations act autonomously, each providing a radar service to the Air Traffic Control Centre (ATCC). The radar systems are European Mode S Station Functional Specification.
