Letters from Rifka Princeton Architectural Press

Frank Lloyd Wright: From Within Outward features a lifetime of achievement by this titan of American architecture through newly commissioned contemporary photography, archival photography, and wonderfully detailed drawings of more than 200 projects, including such masterworks as the S. C. Johnson & Sons Administration Building in Wisconsin, the Guggenheim Museum in New York, and Taliesin West, Wright's desert home in Arizona, as well as less-known projects designed for Baghdad, Iraq, and beyond. The book is richly accompanied by authoritative text from some of the most important Frank Lloyd Wright scholars and writers at work today, and presents a timely reevaluation of the work and life of Frank Lloyd Wright within the context of social spaces, in the spirit of the exhibition.

From the Earliest Times to the Present Day Dundurn

An award-winning cultural history of how we experience the world through art, film and architecture Atlas of Emotion is a highly original endeavor to map the cultural terrain of spatio-visual arts. In an evocative blend of words and pictures, Giuliana Bruno emphasizes the connections between "sight" and "site" and "motion" and "emotion." In so doing, she touches on the art of Gerhard Richter and Louise Bourgeois, the filmmaking of Peter Greenaway and Michelangelo Antonioni, media archaeology and the origins of the museum, and her own journeys to her native Naples. Visually luscious and daring in conception, Bruno's book opens new vistas and understandings at every turn.

A Visual Introduction Routledge

Form and Fabric in Landscape Architecture provides an original, visual approach to the study of landscape architecture by creating a spatial morphology based on use and experience of landscapes. It explores aesthetic, spatial and experiential concepts by providing a structure through which landscapes can be understood and conceived in design. 'Fabric' is the integrated

structure of whole landscapes, while 'form' refers to the components that make up this fabric. Together form and fabric create a morphology of landscape useful for the development of visual-spatial design thinking and awareness. This book is intended as both an introduction to the discipline for students of landscape architecture, architecture and planning, and a source of continuing interest for more experienced environmental designers.

Information Architecture for the World Wide Web Pearson Education

For most of the twentieth century, modernist viewers dismissed the architectural ornament of Louis H. Sullivan (1856-1924) and the majority of his theoretical writings as emotional outbursts of an outmoded romanticism. In this study, Lauren Weingarden reveals Sullivan's eloquent articulation of nineteenth-century romantic practices - literary, linguistic, aesthetic, spiritual, and nationalistic - and thus rescues Sullivan and his legacy from the narrow role imposed on him as a pioneer of twentieth-century modernism. Using three interpretive models, discourse theory, poststructural semiotic analysis, and a pragmatic concept of sign-functions, she restores the integrity of Sullivan's artistic choices and his historical position as a culminating figure within nineteenth-century romanticism. By giving equal weight to Louis Sullivan's writings and designs, Weingarden shows how he translated both Ruskin's tenets of Gothic naturalism and Whitman's poetry of the American landscape into elemental structural forms and organic ornamentation. Viewed as a site where various romantic discourses converged, Sullivan's oeuvre demands a cross-disciplinary exploration of each discursive practice, and its "rules of accumulation, exclusion, reactivation." The overarching theme of this study is the interrogation and restitution of those Foucauldian rules that enabled Sullivan to articulate architecture as a pictorial mode of landscape art, which he considered co-equal with the spiritual and didactic functions of landscape poetry.

The Illustrated Handbook of Architecture Being a Concise and Popular Account of the Different Styles of Architecture Prevailing in All Ages and All Countries by

James Fergusson John Wiley & Sons

Discusses Web site hierarchy, usability, navigation systems, content labeling, configuring search systems, and managing the information architecture development process.

An Autobiography in Architecture Princeton Alumni Weekly

First published in 1996, *The Eyes of the Skin* has become a classic of architectural theory. It asks the far-reaching question why, when there are five senses, has one single sense - sight - become so predominant in architectural culture and design? With the ascendancy of the digital and the all-pervasive use of the image electronically, it is a subject that has become all the more pressing and topical since the first edition's publication in the mid-1990s. Juhani Pallasmaa argues that the suppression of the other four sensory realms has led to the overall impoverishment of our built environment, often diminishing the emphasis on the spatial experience of a building and architecture's ability to inspire, engage and be wholly life enhancing. For every student studying Pallasmaa's classic text for the first time, *The Eyes of the Skin* is a revelation. It compellingly provides a totally fresh insight into architectural culture. This third edition meets readers' desire for a further understanding of the context of Pallasmaa's thinking by providing a new essay by architectural author and educator Peter MacKeith. This text combines both a biographical portrait of Pallasmaa and an outline of his architectural thinking, its origins and its relationship to the wider context of Nordic and European thought, past and present. The focus of the essay is on the fundamental humanity, insight and sensitivity of Pallasmaa's approach to architecture, bringing him closer to the reader. This is illustrated by Pallasmaa's sketches and photographs of his own work. The new edition also provides a foreword by the internationally renowned architect Steven Holl and a revised introduction by Pallasmaa himself.

Frank Lloyd Wright from Within Outward John Hunt Publishing

From Newbery media winner Karen Hesse comes an unforgettable story of an immigrant family's journey to America. "America," the girl repeated. "What will you do there?" I was silent for a little time. "I will do everything there," I answered. Rifka knows nothing

about America when she flees from Russia with her family in 1919. But she dreams that in the new country she will at last be safe from the Russian soldiers and their harsh treatment of the Jews. Throughout her journey, Rifka carries with her a cherished volume of poetry by Alexander Pushkin. In it, she records her observations and experiences in the form of letters to Tovah, the beloved cousin she has left behind. Strong-hearted and determined, Rifka must endure a great deal: humiliating examinations by doctors and soldiers, deadly typhus, separation from all she has ever known and loved, murderous storms at sea, detainment on Ellis Island--and is if this is not enough, the loss of her glorious golden hair. Based on a true story from the author's family, *Letters from Rifka* presents a real-life heroine with an uncommon courage and unsinkable spirit.

Using CSS to add transitions and animation to web page designs takes advantage of the dynamic nature of designing for the web. They are quickly becoming the de facto way designers can add a measure of delight and surprise to web pages. More importantly, they can help make web pages more usable. Using stunning visuals and design, *CSS Animations and Transitions for the Modern Web* teaches web designers how to dynamically change design elements on a web page over time. It starts by showing a variety of ways you can transform elements and then teaches two different methods for setting the change in motion in action. The book will start the topic as simply as possible and build on the basics with more elaborate techniques. Simple examples will be presented throughout and the book will close with more detailed, complex, and practical examples. For most of his examples, Steven uses the new open-source code editor from Adobe, Brackets, but the book is perfectly usable with any code editing environment or even a simple text editor.

Form Follows Feelings Henry Holt and Company (BYR)

An account of the life and work of the architect Minoru Yamasaki that leads the author to consider how (and for whom) architectural history is written. *Sandfuture* is a book about the life of the architect Minoru Yamasaki (1912-1986), who remains on the margins of history despite the enormous influence of his work on American architecture and society. That Yamasaki's most famous projects—the Pruitt-Igoe apartments in St. Louis and the original World Trade Center in New York—were both destroyed on

national television, thirty years apart, makes his relative obscurity all the more remarkable. *Sandfuture* is also a book about an artist interrogating art and architecture's role in culture as New York changes drastically after a decade bracketed by terrorism and natural disaster. From the central thread of Yamasaki's life, *Sandfuture* spirals outward to include reflections on a wide range of subjects, from the figure of the architect in literature and film and transformations in the contemporary art market to the perils of sick buildings and the broader social and political implications of how, and for whom, cities are built. The result is at once sophisticated in its understanding of material culture and novelistic in its telling of a good story.

[An Anthology of Architectural Theory 1965 - 1995](#) Springer

Published in 1923, *Toward an Architecture* had an immediate impact on architects throughout Europe and remains a foundational text for students and professionals. This edition includes a new translation of the original text, a scholarly introduction, and background notes that illuminate the text and illustrations.

International Research and Practice John Wiley & Sons

Architecture of Health is a story about the design and life of hospitals--about how they are born and evolve, about the forces that give them shape, and the shifts that conspire to render them inadequate. Reading architecture through the history of hospitals is a deciphering tool for unlocking the elemental principles of architecture and the intractable laws of human and social conditions that architecture serves in each of our lives. This book encounters brilliant and visionary designers who were hospital architects but also systems designers, driven by the aim of social change. They faced the contradictions of health care in their time and found innovative ways to solve for specific medical dilemmas. Less-known designers like Filarete, Lluís Domènech i Montaner, Albert Schweitzer, Max Fry and Jane Drew, John Dawe Tetlow, Gordon Friesen, Thomas Wheeler, and Eberhard Zeidler are studied here, while the medical spaces of more widely-known architects like Isambard Brunel, Alvar Aalto, Le Corbusier, Louis Kahn, and Paul Rudolph also help inform this history. All these characters were polymaths and provocateurs, but none quite summarizes this history more succinctly than Florence Nightingale, who in laying out her guidelines for ward design in 1859, shows how the design of a medical facility can influence an

entire political and social order. *Architecture of Health*, richly illustrated with images and never before published renderings and drawings from the MASS Design Group, charts historical epidemics alongside modern and contemporary architectural transformations in service of medicine, health, and habitation; it explores how infrastructure facilitates healing and architecture's greater role in constructing our societies.

[The Eyes of the Skin](#) Taylor & Francis

Rudolf Arnheim has been known, since the publication of his groundbreaking *Art and Visual Perception* in 1974, as an authority on the psychological interpretation of the visual arts. Two anniversary volumes celebrate the landmark anniversaries of his works in 2009. In *The Power of the Center*, Arnheim uses a wealth of examples to consider the actors that determine the overall organization of visual form in works of painting, sculpture, and architecture. *The Dynamics of Architectural Form* explores the unexpected perceptual consequences of architecture with Arnheim's customary clarity and precision.

A History of Architecture in All Countries: A history of architecture in all countries. 1874 MIT Press

Architecture Inside Out is precisely what the title says - it tells us everything we need to know about the subject of 'Real Architecture'. For everyone (like me) who has been seeking the true explanation, this book is a must read. It should be required reading for all architecture and design students as well as for all those individuals who are responsible for making decisions that influence our built environment. Wayne Ruga, AIA, FIIDA, Hon. FASID, Founder, Symposium on Healthcare Design and The Center for Health Design Traditionally, men have been builders of the universe. This book gives a glimpse of what the world would be like if women took over more of this responsibility. Rather than thinking of architecture as an egotistical gesture involving form and facade, Franck and Lepori believe it should be more alive and take its character from the human body, which is a moving, animated structure that relies on its inner geography for optimum experience. When similarly designed from the inside out, rather than being austere and devoid of sensibilities, buildings would offer spatial sensations that connect with people, such as quality of light, comforting ambiance, joyful spirit and nurturing feelings of support. The new millennium deserves a dramatic revision in thinking away from convention into this new, emotionally-charged

yet utterly convincing construct. Beverly Russell, Executive Director, Archeworks and author of *Architecture & Design 1970-1990*, *Women of Design* and *40 Under 40 Architecture* Inside Out weaves together an impressive array of authors and architects - Paul Valéry and Gottfried Semper, Balkrishna Doshi, Juhani Pallasmaa and Steven Holl among them - in vivid description of architectural experience. Extending the long-neglected thread of S.E. Rasmussen's classic *Experiencing Architecture*, the authors use such contemporary lenses as phenomenology and feminism to guide us on our journey through buildings. They trace the haptic qualities of architecture back through the design process with both daring and documentation. Their case studies of architecture's generation will inform teacher and student alike. Deborah Gans, Architect and Associate Professor, Pratt Institute *Architecture Inside Out* celebrates what the design of places and objects often neglects: the needs, activities and emotions of people and the possibilities for transformation in our ways of thinking and living. With the contemporary interest in architecture as idea and image, there has been a loss of attention to its content in both its materiality and its inhabitation. With the current relentless creation of financially profitable products, there is little care or time for process. The authors describe an alternative approach that attends to content and process, that places human life and experience as well as materiality at the centre of design, that seeks out opportunities for discovery, growth and transformation. Design is seen not as a project, imposing preconceived ideas upon a situation, but as a process, evolving from inside out: from the desires and activities of people, from site and context, and from a dialogue between architect and client. Examples from art, literature, biology and history, cases from architectural education and practice, and individual life experiences complement the book's strong conceptual framework. Karen A. Franck is an environmental psychologist who has taught for many years in a school of architecture in the US. R. Bianca Lepori is a practising architect in Italy with many years of experience in designing houses and maternity health care facilities. Together they draw upon their diverse backgrounds and areas of expertise, moving easily from concept to example, from a descriptive voice to an experiential one, from one field to another, to present a vision of architecture they share.

Louis H. Sullivan and a 19th-Century Poetics of Naturalized Architecture Basic Books

Why attractive things work better and other crucial insights into human-centered design Emotions are inseparable from how we humans think, choose, and act. In *Emotional Design*, cognitive scientist Don Norman shows how the principles of human psychology apply to the invention and design of new technologies and products. In *The Design of Everyday Things*, Norman made the definitive case for human-centered design, showing that good design demanded that the user's must take precedence over a designer's aesthetic if anything, from light switches to airplanes, was going to work as the user needed. In this book, he takes his thinking several steps farther, showing that successful design must incorporate not just what users need, but must address our minds by attending to our visceral reactions, to our behavioral choices, and to the stories we want the things in our lives to tell others about ourselves. Good human-centered design isn't just about making effective tools that are straightforward to use; it's about making affective tools that mesh well with our emotions and help us express our identities and support our social lives. From roller coasters to robots, sports cars to smart phones, attractive things work better. Whether designer or consumer, user or inventor, this book is the definitive guide to making Norman's insights work for you.

Architecture and Richard Neutra in a Psychoanalytic Culture John Wiley & Sons

Bestselling author Alain de Botton considers how our private homes and public edifices influence how we feel, and how we could build dwellings in which we would stand a better chance of happiness. In this witty, erudite look at how we shape, and are shaped by, our surroundings, Alain de Botton applies Stendhal's motto that "Beauty is the promise of happiness" to the spaces we inhabit daily. Why should we pay attention to what architecture has to say to us? de Botton asks provocatively. With his trademark lucidity and humour, de Botton traces how human needs and desires have been served by styles of architecture, from stately Classical to minimalist Modern, arguing that the stylistic choices of a society can represent both its cherished ideals and the qualities it desperately lacks. On an individual level, de Botton has deep sympathy for our need to see our selves reflected in our surroundings; he demonstrates with great wisdom how buildings — just like friends — can serve as guardians of our identity. Worrying about the shape of our sofa or the colour of our walls might seem self-indulgent, but de Botton considers the hopes and fears we have for our homes at a new level of depth and insight. When shopping for furniture or remodelling the kitchen, we don't just consider functionality but also the major questions of aesthetics and the philosophy of art: What is beauty? Can beautiful surroundings make us good? Can beauty bring happiness? The buildings we find beautiful, de Botton concludes, are those that represent our ideas of a meaningful life. *The Architecture of Happiness* marks a return to what Alain does best — taking on a subject whose allure is at once tantalizing and a little forbidding and offering to readers a completely beguiling and original exploration of the subject. As he did with Proust, philosophy, and travel, now he does with architecture.

Form Follows Libido Univ of California Press

Every city has its unique and valuable identity, this identity is revealed through its physical and visual form, it is seen through the eyes of its residents and users. The city develops over time, and its identity evolves with it. Reflecting the rapid and constant

changes the city is subjected to, Architecture and Arts, is the embodiment of the cultural, historical, and economical characteristics of the city. This conference was dedicated to the investigation of the different new approaches developed in Architecture and Contemporary arts. It has focused on the basis of urban life and identities. This volume provides discussions on the examples and tendencies in dealing with urban identities as well as the transformation of cities and urban cultures mentioned in terms of their form, identity, and their current art. Contemporary art, when subjected to experiments, continues to be produced in various directions, to be consumed and to put forward new ideas. Art continuously renews itself, from new materials to different means of communication, from interactive

works to computer games, from new approaches to perceptual paradigms and problems of city and nature of the millennium. This is an Open Access ebook, and can be found on www.taylorfrancis.com.

Renowned architect Eberhard Zeidler tells his story in a two-volume book that explores his early life in Germany and his years in Canada after he moved there in 1951. Architect of Toronto's Eaton Centre and Trump International Hotel and Tower, Zeidler has left his stamp on the urban landscape of Canada, the United States, and the rest of the world.

Systemics of Incompleteness and Quasi-Systems Language Science Press

"Form" and "formalism" are a pair of highly productive and

polysemous terms that occupy a central place in much linguistic scholarship. Diverse notions of "form" – embedded in biological, cognitive and aesthetic discourses – have been employed in accounts of language structure and relationship, while "formalism" harbours a family of senses referring to particular approaches to the study of language as well as representations of linguistic phenomena. This volume brings together a series of contributions from historians of science and philosophers of language that explore some of the key meanings and uses that these multifaceted terms and their derivatives have found in linguistics, and what these reveal about the mindset, temperament and daily practice of linguists, from the nineteenth century up to the present day.
