New York Times and USA TODAY bestselling sensation Linda Lael Miller returns with these classic McKettrick tales in one great collection! Sierra's Homecoming When she moved to her family's ancestral ranch, single mom Sierra McKettrick was disconcerted by the Triple M's handsome caretaker, Travis Reid. But when her son claimed to see a mysterious boy in the house, and an heirloom teapot started popping up in unexpected places, Sierra wondered if the attraction between her and Travis might be the least of her worries. In 1919 widowed Hannah McKettrick lived at the ranch with her son and her brother-in-law, Doss. Her confused feelings for Doss and her son's health problems occupied all her thoughts...until the family teapot started disappearing. Could Sierra and her ancestor Hannah be living parallel lives? The McKettrick Way Meg McKettrick longs for a baby—husband optional. Perfect father material is gorgeous Brad O'Ballivan, old flame and new owner of his family's ranch in Stone Creek. Meg wants to do things her way...the McKettrick way. But Brad feels just as strongly about the O'Ballivan way.... Love, marriage, babies and a lifetime to share—that's what Brad wants. Not a single night of passion, an unexpected pregnancy and a woman who won't budge. For a rugged rodeo cowboy who never gives up, it's a battle of wills he intends to win...and nothing matters more than claiming Meg's wild McKettrick heart.

McKettricks Bargain Bundle by Linda Miller,Linda Miller released on Feb 1, 2009 is available now for purchase.

Foundations of Information and Knowledge Systems HQN Books

Some crimes are bigger than others, and the same is true of crime stories. Rogues Gallery brings together for the first time a series of shorter Sebastian McCabe-Jeff Cody mysteries - three novellas and two short stories. The many fans of the McCabe - Cody novels will be delighted to find that these tales are characterized by the same dry humor, solid plotting, and adroit characterization that distinguished the novel-length adventures. This case book includes: Art in the Blood - An art show in downtown Erin, featuring the works of Kate McCabe and other female artists, goes horribly awry when murder stalks the gallery. The Revengers - Halloween finds Jeff Cody and Lynda Teal dressed as John Steed and Emma Peel. But before they get to the party, they find themselves in an Avengers-like mystery. Santa Crime - Sebastian McCabe, dressed as Santa Claus for a Christmas event at a local charity, finds himself acting more like Sherlock Holmes to solve a holiday theft. A Cold Case - House-hunting turns into a nightmare for the newly married Jeff and Lynda when a body turns up in the freezer chest of a house they'd like to call home. Dogs Don't Make Mistakes - Nobody would blame Jeff and Mac's friend Ashley Crutcher for shooting her estranged husband when he entered their home in the middle of the night. But she insists she didn't do it. PRAISE FOR ROGUE'S GALLERY Dan Andriacco hits it out of the park with Rogues Gallery, a collection of short mystery stories featuring

the two unlikely brothers-in-law and modern day Holmes and Watson of Sebastian McCabe and Jeff Cody. Narrator Cody is a sardonic, witty newlywed everyman while McCabe (rotund in the tradition of Nero Wolfe) is an avid, oddball Sherlockian with formidable powers of his own. Andriacco's distinctive tone delights - in a similar manner to the brilliant M.C.Beaton - with his combination of cozy, small town detail and hilarious and pointed observations of its denizens. The cozy elements are all in the settings, here including an all-female art show, Christmas and Halloween parties, college politics and the developing relations of Cody and his new bride as they navigate newlywed issues. But unlike many mysteries with cozy elements, Andriacco's plots are masterful. Like a skilled close-up magician, Andriacco lulls you into what appears to be quiet Midwestern sense of normalcy, only to turn up an ace from his sleeve with a murderous surprise. You're in the hands of a master of mystery plotting here. Rogues Gallery is a delightful read, hard to put down, and highly recommended. And did I say fun? - Hollywood screenwriter Bonnie MacBird, author of TRON

Integrable systems are related to algebraic geometry in many different ways. This book deals with some aspects of this relation, the main focus being on the algebraic geometry of the level manifolds of integrable systems and the construction of integrable systems, starting from algebraic geometric data. For a rigorous account of these matters, integrable systems are defined on affine algebraic varieties rather than on smooth manifolds. The exposition is self-contained and is accessible at the graduate level; in particular, prior knowledge of integrable systems is not assumed.

This concise new text covers all the traditional topics of the course, and also contemporary subjects such as data warehousing, Web site management, and CRM — all areas of work that students will encounter in their future marketing careers. Unique to this text is its customer orientation, reflected in its content, but also in the way that the authors organize the material through the sequence of customer acquisition,

interactions, and retention. Each chapter includes topical mini-cases such as the launch of the iPhone, e-Harmony.com, and Southwest Airlines. In addition, there are eight full cases in the back of the book, together with a helpful student guide to analyzing a case.

This book constitutes the proceedings of the 7th International Symposium on Foundations of Information and Knowledge Systems, FoKS 2012, held in Kiel, Germany, in March 2012. The 12 regular and 8 short papers, presented together with two invited talks in full paper-length, were carefully reviewed and selected from 53 submissions. The contributions cover foundational aspects of information and knowledge systems. These include the application of ideas, theories or methods from specific disciplines to information and knowledge systems, such as discrete mathematics, logic and algebra, model theory, information theory, complexity theory, algorithmics and computation, statistics, and optimization.
