Climate change is one of the inescapable themes of current times. Climate change confronts society in issues as diverse as domestic and international political debate and negotiation, discussion in the media and public opinion, land management choices and decisions, and concerns about environmental, social and economic priorities now and for the future. Climate change also spans spatial, temporal and organisational scales, and has strong links with nature-society relationships, environmental dynamics, and vulnerability. Understanding the full range of possible consequences of climate change is essential for informed decision making and debate. This book provides a collection of chapters that span environmental, social and economic aspects of climate change. Together the chapters provide a diverse and contrasting series that highlights the need to analyze, review and debate climate change and its possible impacts and consequences from multiple perspectives. The book also is intended to promote discussion and debate of a more integrated, inclusive and open approach to climate change and demonstrates the value of geography in addressing climate change issues. This book was originally published as a special issue of *Annals of the Association of American Geographers*.

From the author of the New York Times bestseller *Prisoners of Geography*, the highly anticipated follow-up that uses ten maps of crucial regions around the globe to explain the geopolitical strategies of today's world powers and what it means for our future. Tim Marshall's global bestseller *Prisoners of Geography* offered us a "fresh way of looking at maps" (The New York Times Book Review), showing how every nation's choices are limited by mountains, rivers, seas and concrete. Since then, the geography hasn't changed, but the world has. Now, in this revelatory new book, Marshall takes us into ten regions that are set to shape global politics and power. Find out why the Earth's atmosphere is the world's next battleground; why the fight for the Pacific is just beginning; and why Europe's next refugee crisis is closer than we think. In ten chapters covering Australia, The Sahel, Greece, Turkey, the UK, Iran, Ethiopia, Saudi Arabia, Spain and Space, Marshall explains how a region's geography and physical characteristics affect the decisions made by its leaders. Innovative, compelling, and delivered with Marshall's trademark wit and insight, this is a gripping and enlightening exploration of the power of geography to shape humanity's past, present, and—most importantly—our future.

Ten Maps That Explain Everything About the World Routledge

PHYSICAL GEOGRAPHY, Eleventh Edition, uses the combined expertise of three accomplished and respected geographers to show not only what constitutes physical geography but also the interrelationships between people and Earth's natural environment. The well-written text and excellent illustrations emphasize three essential themes to demonstrate the major roles of the discipline -- Geography as Physical Science, Geography as Spatial Science, and Geography as Environmental Science. With a strong focus on processes and the interrelationships among Earth's systems, this text guides students to an understanding and appreciation of how the various natural systems function and of how humans are an integral component of physical geography.

Historically, this was the first Physical Geography textbook to take an environmental sustainability approach, and the authors continue to address the theme of human interactions with the environment. "This thirteen edition of *Human Geography* retains the organization and structure of its earlier versions. Like them, it seeks to introduce its users to the scope and excitement of geography and its relevance to their daily lives and roles as informed citizens. We recognize that for many students, human geography may be their first or only work in geography and this, their first or only textbook in the discipline. For these students particularly, we seek to convey the richness and breadth of human geography and to give insight into the nature and intellectual challenges of the field of geography itself. Our goals are to be inclusive in content, current in data, and relevant in interpretations. These goals are elusive. Because of the time lapse between world events and the publication of a book, events inevitably outpace analysis. We therefore depend on a continuing partnership with classroom instructors to incorporate and interpret current events and emerging geographic patterns"--
