MS'li kadınların gebe  
kalma ve sağlıklı çocuk  
sahibi olma yetileri  
sağlıklı kadınlardan  
farklı değildir. MS'li  
kadınlarda gerekli  
görüldüğü takdirde

yardımcı üreme teknikleri kullanılabilir. Ovulasyon stimülasyonu için kullanılan ilaçların bazılarının (GnRH agonistsleri) atak riskini artırabileceği bilinmelidir. Gebelik planlayan bir MS hastasının gebelik için uygun olup olmadığı ve tedavilerin gözden geçirilmesi için mutlaka hekimine danışması gerekir. Gebe kalma zamanlaması için kişiselleştirilmiş bir yaklaşım benimsenmelidir; öncesinde en az 2 yıllık tedavi altında en az 1 yıllık hastalık aktivitesi yatışmış olmalıdır. Enjekte edilebilir ajanlar riskler ve yararlar tartıldıktan sonra hamilelik boyunca da devam edebilir. Farklı arınma süreleri olan oral

immunomodülatör ilaçlar gebelik sırasında sürdürülmemelidir, emzirme döneminde de kullanımları önerilmez. Deneyimler ve takip çalışmalarının sonuçlarından çıkan bilgilerle, kesilmesi ile hastalık aktivitesi artabilen Natalizumab'ın risk ve yarar gözetilerek belli gebelik haftasına kadar doz aralıkları açılarak uygulanması önerilebilir. Gebelik kategorisi FDA tarafından yeniden düzenlenmektedir. Hayvan çalışmalarında teratojen olarak bilinen ajanların insan verilerinin değerlendirilmesi hekimlere verilecek önerilerde yol gösterici olacaktır.

This book highlights the challenges facing quality

assurance/quality control (QA/QC) in today's

biopharmaceutical environment and presents the strategic importance and value generated by QA/QC for their involvement in control of

manufacturing. It will put into perspective the need for a graded approach to QA/QC from early clinical trials through market approval. Since the first edition published in 2004, there have been more than 50 new regulatory guidances released by the Food and Drug Administration (FDA),

European Medicines Agency (EMA) and ICH that affect the CMC regulatory compliance of biopharmaceuticals; also the application of biosimilars has been developed in Europe and is under development in the USA. The revised update will be broadened to include not only biopharmaceuticals (biotech drugs) but also other biologics (vaccines, cell therapy, plasma-derived proteins, etc.)

Indolente Lymphome  
Plunkett Research, Ltd.

Animal cells are the preferred “cell factories” for the production of complex molecules and antibodies for use as prophylactics, therapeutics or diagnostics. Animal cells are required for

the correct post-translational processing (including glycosylation) of biopharmaceutical protein products. They are used for the production of viral vectors for gene therapy. Major targets for this therapy include cancer, HIV, arthritis, cardiovascular and CNS diseases and cystic fibrosis. Animal cells are used as in vitro substrates in pharmacological and toxicological studies. This book is designed to serve as a comprehensive review of animal cell culture, covering the current status of both research and applications. For the student or R&D scientist or new researcher the protocols are central to the performance of cell culture work, yet a

broad understanding is essential for translation of laboratory findings into the industrial production. Within the broad scope of the book, each topic is reviewed authoritatively by experts in the field to produce state-of-the-art collection of current

research. A major reference volume on cell culture research and how it impacts on production of biopharmaceutical proteins worldwide, the book is essential reading for everyone working in cell culture and is a recommended volume for all biotechnology libraries.
