Hematology is often considered a challenging subject by students and junior medical staff alike. Using key scientific and clinical principles, this succinct guide provides a summary of modern day-to-day clinical practice in paediatric hematology. Focusing on the facts that underpin patient management, each chapter offers an initial summary of a particular paediatric hematologic condition. Several key clinical scenarios set out how common difficulties should be managed, from the neonate with line thrombosis, to the newly presenting patient with leukaemia, and the child who has suffered a stroke. Covering all hematology topics on the syllabus of the American Board of Paediatrics subspecialty examinations, this authoritative guide is ideal for both postgraduates and junior doctors, whose understanding of hematological conditions will increase greatly upon reading. This comprehensive and practical book specifically aims to equip clinicians to diagnose and manage children with hematological illness, and to support them and their families.

This book identifies the various ethical challenges that arise in pediatric hematology/oncology and provides the necessary tools to overcome these challenges. Aiming to expand upon and strengthen providers' knowledge and experience in pediatric health care ethical issues, the text positions providers to be beneficial resources to faculty, staff, patients, and families within their institution. It presents a multidisciplinary approach to sound ethical practices that is necessary to effectively care for these patients and their families. The book reviews the principles of ethical decision-making, the unique difficulties in using children as research subjects, common ethical conundrums involved in providing end-of-life care, and general moralities of professional practice. Written by experts in their fields, *Ethical Issues in Pediatric Hematology/Oncology* is an innovative and valuable resource for clinicians, practitioners, and trainees who work in the field of pediatric hematology/oncology.

Typically, manuals of pediatric hematology-oncology are written by specialists from high-income countries, and usually target an audience with a sub-specialist level of training, often assisted by cutting-edge diagnostic and treatment facilities. However, approximately 80% of new cases of cancer in children appear in mid- and low-income countries. Almost invariably, general practitioners or general pediatricians without special training in oncology will look after children with malignancies who enter the health care system in these countries. The diagnostic facilities are usually limited, as are the treatment options. The survival figures in these conditions are somewhere below 20%, while in high-income countries they are in the range of 80% for many childhood cancers. *Pediatric Hematology-Oncology in Countries with Limited Resources* is the only book of its kind to provide specific guidance applicable to limited resource settings and builds up from the foundation of general practitioner or general pediatrician competence. Written and edited by leaders in the field, this manual educates physicians on the essential components of the discipline, filtered through the experience of specialists from developing countries, with immediate applicability in the specific healthcare environment in these countries.

Structured to be a companion to the recently published Handbook of Transfusion Medicine, the Handbook of Pediatric Transfusion Medicine is dedicated to pediatric hematology-oncology and transfusion medicine, a field which remains ambiguous and which has generated few comprehensive texts. This book stands alone as one of the few texts that addresses transfusion issues specific to pediatric medicine. Written in an eminently readable style, this authoritative handbook is a requirement for any pediatric physician or caregiver. Neonatal and fetal immune response and in utero development issues Blood compatibility and pre-transfusion testing issues specific to pediatric and neonatal transfusion Therapeutic apheresis including red blood cell exchange and prophylactic chronic erythrocytapheresis for sickle cell patients Also includes a section that concentrates on the consent, quality and legal issues of blood transfusion and donation

Cancer care today often provides state-of-the-science biomedical treatment, but fails to address the psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer-including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life-cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without using existing approaches, tools, and resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met. *Encyclopedia of Cancer and Society* Springer Science & Business Media

The "My Life Beyond" graphic book series tells the true stories of Mayo Clinic patients. Featuring 36 beautiful, fully illustrated pages, this graphic novel shares the inspiring story of Rae Burremo's experience with leukemia. After going through treatment for leukemia, Amy is used to visiting the hospital. As she falls asleep for another medical test, she suddenly finds herself on an adventure. With the help of a shrinking potion, other magic tools and some friends, she's on a mission to help other kids face leukemia and its treatment. What is it really like to have this childhood cancer? Find out how Amy beats leukemia and discovers life beyond her illness. Children's voices are rarely heard amid the complexity of modern medicine. That's why every story in the My Life Beyond series stems from the imagination and experience of a Mayo Clinic patient. The books were developed through collaboration between these patients, Mayo Clinic physicians and author-illustrator Hey Gee. Through this unique lens of inspiring real-life experiences, the series explores how children view illness, challenges and recovery. Leukemia is estimated to affect 1 in every 1000 children, but children's voices and their experiences with this disease are rarely heard. Created through collaboration between pediatric patients, their doctors, and children's author and illustrator Hey Gee, My Life Beyond Leukemia dives into the minds and imaginations of child patients at Mayo Clinic to explain how children experience illness, challenges, and recovery. The "My Life Beyond" graphic novel book series is published in collaboration with Fondation Ipsen.

Only more recently has it been realized that the intense effort to care for and cure a child with cancer does not end with survival. Continued surveillance and a variety of interventions may, in many cases, be needed to identify and care for consequences of treatment that can appear early or only after several decades and impair survivors' health and quality of life. The more than two-thirds of childhood cancer survivors who experience late effects-that is, complications, disabilities, or adverse outcomes-as a result of their disease, its treatment, or both, are the focus of this report which outlines a comprehensive policy agenda that links improved health care delivery and follow-up, investments in education and training for health care providers, and expanded research to improve the long-term outlook for this growing population now exceeding 270,000 Americans.
