Budgeting Basics and Beyond John Wiley & Sons

Budgeting for Local Governments and Communities is designed as the primary textbook for a quarter or semester-long course in public budgeting and finance in an MPA programme. Many currently available texts for this course suffer from a combination of defects that include a focus on federal and state budgeting, a lack of a theoretical governance framework, an omission of important topics, and typically a lack of exercises and datasets for student use. *Budgeting for Local Governments and Communities* solves all of these problems. The book is exceptionally comprehensive and well written, and represents the efforts of veteran authors with both teaching and real-world experience. Key Features: Special Focus on Local Government Budgeting: focuses exclusively on budgeting at the local levels of American government, which are responsible for spending 40 percent of the taxes collected from citizens. Integration of Theory and Practice: teaching cases and chapters capture the "lessons learned" by professional practitioners who have extensive experience in making local public budgeting work on the ground. Polity Approach to Local Budgeting: presents an introduction to local budgeting as the central political activity that integrates the resources of the community into a unified whole. Budgeting is presented as governance work, rather than as a unique set of skills possessed by analysts and financial specialists. Legal, Historical, Economic and Moral Foundations of Local Government Budgeting: provides readers with an understanding of how the structures and processes of local budgeting systems are firmly tethered to the underlying core values, legal principles and historical development of the larger American federal, state and local political systems. Electronic Datasets and Budgeting Exercises: the text includes access to extensive electronic datasets and practice exercises that provide abundant opportunities for students to "learn through doing." Extensive Glossary and Bibliography: covers terms on the history and practice of local public budgeting.

Master's Thesis from the year 2014 in the subject Business economics - Business Management, Corporate Governance, grade: A, Wollega University (East Wollega Zone Finance and Economic Development Office), language: English, abstract: The aim of this thesis is to assess the impact of Integrated Budget and Expenditure system software implementation on customer and end user satisfaction. The study was conducted to evaluate the improvement made by implementing IBEX system and challenges that face the functionality of the IBEX system. In addition, the study tests the relationship between independent variables such as waiting time, cost saving, data accuracy and budget transparency and the dependent variables, customer and end user satisfaction. To achieve the objectives of the study, descriptive and explanatory type of research design was used through the sampling technique, purposive and stratified random sampling. Data was collected through questionnaires from 228 employees of East Wollega zone sectors and 37 end user of the IBEX system. In addition, focus group discussion was used among 37 end users of the IBEX system to gather related data. The data collected from the respondents were analyzed using statistical tools via reliability method, descriptive statistics and Spearman's correlation. The finding shows that the independent variables data accuracy, budget transparency and cost saving are positively related with customer and end user satisfaction, while waiting time is negatively related to end user and customer satisfaction. Furthermore, the results also indicated that implementation of IBEX system allowed the organization to reduce its various cost and saved human energy. Finally, even though the IBEX system is implemented, not yet fully satisfy the needs of customer and end user. Therefore, the researcher gave recommendations on the parts that needs to add another features, and on the challenges that affect the functionality of the IBEX system during its operation.

This paper examines the issue of estimating recurrent costs associated with capital projects in the investment budget. It is intended to help overcome budget planning problems which give rise to the chronic under-funding of maintenance and operating costs typical in some developing economies. The objective is to provide guidance in the preparation of budget submissions so that information on the future recurrent cost implications of today's capital spending is quantified in a way that supports the authorities in making project selection and budget decisions. The paper is in three parts. The first part outlines some concepts and definitions involved in measuring recurrent costs. The second part provides stylized examples of individual projects. And the third part presents some rough empirical guidance drawn from a sample of actual investment projects.

Budgets in the United States follow rules of presentation and use terms that make sense to few outside the world of government finance. Moreover, practices vary widely among the thousands of governments in the country, between federal, state, and local levels. Understanding Government Budgets offers detailed explanations of each of the different types of information found in budgets, featuring annotated examples from both state and local budgets, as well as the budget of the federal government. It stresses that the choices made about format and organization influence the story a budget tells about government. The goal of the book is to make the format of budgets and the information they contain accessible and understandable, helping users make better sense of government and its performance. Perfect for undergraduate or graduate level courses in budgeting and public administration, Understanding Government Budgets also makes a useful guide to budgets for the average citizen with an interest in how government operates or journalists writing about it.

Calculate for Business Success The budgeting process may produce anxiety, but it can be managed. The keys are planning, organization, documentation, preparation, and follow-up. The essence is plan first, budget later. 10 Steps to Successful Budgeting walks you through the fundamentals, explaining your role in your organization's planning and budgeting process. Authors Lianabel Oliver and Eduardo Nin start with a macro perspective, providing an overview of the planning and budgeting process and how it is typically structured within an organization. They then move to preparing a sound budget and defending it to the next level of management. Their combined experience of over 30 years in planning and budgeting will help you navigate this process successfully. The authors' simple, clear explanations and true-to-life examples of budgets and planning tools will help you clarify your departmental spending needs for yourself and others. Each planning and budgeting cycle, the authors explain, represents an opportunity for change. It is a chance to revisit the old and embrace the new. The budget is not something to fear on your to-do list, but a time to reexamine who you are, what you do, and how you can use your resources more effectively.

With the advance of new computing technology, simulation is becoming very popular for designing large, complex and stochastic engineering systems, since closed-form analytical solutions generally do not exist for such problems. However, the added flexibility of simulation often creates models that are computationally intractable. Moreover, to obtain a sound statistical estimate at a specified level of confidence, a large number of simulation runs (or replications) is usually required for each design alternative. If the number of design alternatives is large, the total simulation cost can be very expensive. Stochastic Simulation Optimization addresses the pertinent efficiency issue via smart allocation of computing resource in the simulation experiments for optimization, and aims to provide academic researchers and industrial practitioners with a comprehensive coverage of OCBA approach for stochastic simulation optimization. Starting with an intuitive explanation of computing budget allocation and a discussion of its impact on optimization performance, a series of OCBA approaches developed for various problems are then presented, from the selection of the best design to optimization with multiple objectives. Finally, this book discusses the potential extension of OCBA notion to different applications such as data envelopment analysis, experiments of design and rare-event simulation.

Does the prospect of preparing your school district's budget seem daunting? Beginning school administrators, often having only one theoretical course on the subject under their belt, see the budget development process as a nightmare. New administrators, teachers, and board members who have little experience with budgeting are justifiably concerned by the prospect of their involvement in budgeting. This book leads the reader through all stages of the process, from the theoretical underpinnings (history, types of budgets, etc.) and practical considerations (revenue planning, budget calendar, etc.) through to the adoption of the budget and its implementation. Includes sample budgets, and tips for administration of a budget once it is in place.

Strategic models of auditor-inspectee interaction have neglected implementation details in multiple-inspectee settings. With multiple inspectees, the target audit probability derived from the standard analysis can be implemented with sampling plans differing in the budgets committed to support them. Overly-committed audit budgets tie up unneeded resources that could have been allocated for better uses. This paper studies the minimum committed budget required to implement a target audit probability when (i) the audit sample can be contingent on "red flags" due to signals of inspectees' private information (e.g., from self-reporting) and (ii) the number of inspectees is large. It proposes an audit rule called bounded simple random sampling (SRS), which is shown to require no more committed budget to support than two other rules naturally generalized from the one-to-one analysis. When the number of inspectees is large enough, bounded SRS is nearly as good as any efficient audit rule, which demands the lowest committed budget necessary to implement the target audit probability. The results offer insights on how audit sampling plans may be formulated to reduce inefficiency and what budget usage ratios should be expected accordingly.

This paper defines and explains key stages of the government expenditure chain and describes the controls applied at each stage, including their objectives and key features as well as centralized vs. decentralized approaches in application of those controls. The paper also examines the influence of different administrative traditions on types of expenditure controls, including the authority and responsibility of various institutional actors. Finally, it discusses typical weaknesses/problems associated with different traditions of expenditure control and suggests specific measures for strengthening the control framework. While providing examples of expenditure control practices from more than 32 countries, the paper points out that more than two-thirds of the 85 low and middle income countries covered by the publicly available Public Expenditure and Financial Accountability (PEFA) assessments have weak systems of expenditure control that are also associated with higher levels of expenditure arrears and a lack of budget credibility. This paper will help public financial management practitioners to evaluate budget execution systems and identify priorities for strengthening expenditure controls. It will also usefully guide technical assistance work related to modernization of government budget execution and expenditure control systems, including the design and implementation of IT-based financial management information systems.

This paper presents, for the first time, multi-dimensional indices of the quality of budget institutions in low-income countries. The indices allow for benchmarking against the performance of middle-income countries, across regions, and according to different institutional arrangements that deliver good fiscal performance. Using the constructed indices, the paper provides preliminary empirical support for the hypotheses that strong budget institutions help improve fiscal balances and public external debt outcomes; and countries with stronger fiscal institutions have better scope to conduct countercyclical policies.
