Management Sciences Training Center Butterworth-Heinemann Today, globalization, advances in technology, greater access to information, and communication via social networks generate an explosion of knowledge and cause the working world to experience rapid change based on knowledge and continuous learning. The challenge for universities is to have a curriculum that prepares students for this digital world, but many

characteristics of the school curriculum have been unchanged for decades. Consequently, student experiences can be very different from the experiences required by the labor market. In a learning environment, the desired results will not be achieved if several essential elements are not considered in the instructional teaching process, including learning style, age, and maturity level. *Learning Styles and Strategies for Management Students* is a critical scholarly resource that provides essential research on the growing recognition of the critical role of education through concepts and principles of styles and strategies of learning. Additionally, it explores key developments in the methodologies, strategies, and learning styles of students, mainly in management studies. Featuring an array of topics such as digital education, sustainability, and management, this book is ideal for academicians, researchers, administrators, curriculum designers, policymakers, practitioners, and students.

The Federal Emergency Management Agency (FEMA) is responsible for coordinating the delivery of federal support to state, local, tribal, and territorial governments under Presidential emergency or major disaster declarations or to other federal agencies under the concept of federal-to-federal support. It is important to recognize that FEMA does not assume responsibility for local incident command activities but, instead, provides a structure for the command, control, and coordination of federal resources to states, local incident commands, and other end users. The FEMA Incident Management Handbook (IMH) is a tool to assist FEMA emergency management personnel in conducting their assigned missions in the field. The IMH provides information on FEMA's incident-level operating concepts, organizational structures, functions, position descriptions, and key assets and

teams. The IMH is intended for use by FEMA personnel deployed at the incident level. However, the IMH also provides whole community stakeholders operating in a FEMA facility information about key incident-level FEMA functions. The concepts in the IMH are applicable to FEMA operations during Stafford Act-based Presidential declarations and non-Stafford Act incidents involving federal-to-federal support.
