This critical addition to the growing literature on innovation contains extensive analyses of the institutional and spatial aspects of innovation. Written by leading scholars in the fields of economic geography, innovation studies, planning, and technology policy, the fourteen chapters cover conceptual and measurement issues in innovation and relevant technology policies. institutional factors facilitate or hamper the flows of information and knowledge within and across firms, regions, and nations. In particular, they provide insights into the roles of important institutions such as gender and culture which are often neglected in the innovation literature, and demonstrate the key role which geography plays in the innovation process. Institutions and policy measures which support entrepreneurship and cluster development are also discussed. The result is a comparative picture of the institutional factors underlying innovation systems across the globe.

Psychological Testing in the Age of Managed Behavioral Health Care CRC Press

Written by a recognized expert in

assessment employed by a large managed behavioral healthcare organization (MBHO), this book seeks to provide psychologists who rely on testing as an integral part of their practice, a guide on how to survive and thrive in the era of managed behavioral healthcare. It also offers ideas on how to capitalize on the opportunities that managed care presents to psychologists. The goal is to demonstrate that despite the tightening of the reins on authorizations for reimbursable testing, psychological testing can continue to play an important role in psychological practice and behavioral healthcare service delivery. The book presents ideas for: *increasing the likelihood of getting tests authorized by MBHOs; *using inexpensive/public domain assessment instruments; *ethically using psychological testing in MBHO settings; *capitalizing on the movement to integrate primary care and behavioral healthcare through the use of psychological testing; and *designing and implementing outcomes assessment systems within MBHO settings. Intended for practicing psychologists and other behavioral health practitioners employed

by MBHOs in direct service delivery, care management or supervisory positions, as well as for graduate clinical or counseling psychology students who will most likely work in MBHO settings.

methods are increasingly widely used to bridge the gaps between the evidence base for best clinical practice, what actually happens in practice, and the achievement of better population health outcomes. Among a range of quality improvement strategies, CQI methods are characterised by iterative and ongoing use of specific processes to identify quality

problems, develop solutions, and implement and evaluate changes. The application of CQI processes in health is evolving and evidence of their success continues to emerge. There is, however, a need to enhance understanding of how best to implement, scale-up and evaluate CQI programs for the purpose of improving quality of care and population health outcomes in different contexts. This research topic aims to attract articles that add to knowledge of useful approaches to tailoring CQI methods for different contexts or purposes, and for implementation, scale-up and evaluation of CQI interventions/programs.
