The Definitive Guide to HR Management Tools (Collection) SAGE Publications

This book contains a collection of research papers on accounting information systems including their strategic role in decision processes, within and between companies. An accounting system is a complex system composed of a mix of strictly interrelated elements such as data, information, human resources, IT tool, accounting models and procedures. Accounting information systems are often considered the instrument by default for accounting automation. This book aims to sketch a clear picture of the current state of AIS research, including design, acceptance

and reliance, value-added decision making, interorganizational links, and process improvements. The contributions in this volume emphasize that AIS has grown into a powerful strategic tool. The book provides evidence for this observation by examining a wide range of current issues ranging from theory development in AIS to practical applications of accounting information systems. In particular it focuses on themes of growing interest in the realm of XBRL and Financial Reporting, Management Information Systems, IT/IS Audit and IT/IS Compliance. The book will be of interest to financial and managerial accountants and IT/IS practitioners, including information systems managers and consultants.

Is there a way for countries to turn this? International Monetary Fund (IMF) came as a solution to cure those countries in need of fund that includes Indonesia. Indonesia is not cured. However, in 2012 Indonesia declared their pledge to IMF of 1 Billion dollar in terms of bonds and even the Indonesian president by UN Secretary-General is appointed as High-level Panel advisor of Millennium Development Goals beyond 2015.
