**Arthropods of Tropical Forests** Icon Books Ltd

This handbook covers DEA topics that are extensively used and solidly based. The purpose of the handbook is to (1) describe and elucidate the state of the field and (2), where appropriate, extend the frontier of DEA research. It defines the state-of-the-art of DEA methodology and its uses. This handbook is intended to represent a milestone in the progression of DEA. Written by experts, who

are generally major contributors to the topics to be covered, it includes a comprehensive review and discussion of basic DEA models, which, in the present issue extensions to the basic DEA methods, and a collection of DEA applications in the areas of banking, engineering, health care, and services. The handbook's chapters are organized into two categories: (i) basic DEA models, concepts, and their extensions, and (ii) DEA applications. First edition contributors have returned to update their work. The second edition includes updated versions of selected first edition chapters. New chapters have been added on: different approaches with no need for a priori choices of weights (called "multipliers) that reflect meaningful trade-offs, construction of static and dynamic DEA technologies, slacks-based model and its extensions, DEA models for DMUs that have internal structures network DEA that can be used for measuring supply chain operations, Selection of DEA applications in the service sector

with a focus on building a conceptual framework, research design and interpreting results.

*The Scientific Bases for Preservation of the Mariana Crow* John Wiley & Sons

A New York Times, USA Today, and national indie bestseller. A Feast of Wonder! Created by the ever-curious minds behind Atlas Obscura, this breathtaking guide transforms our sense of what people around the world eat and drink. Covering all seven continents, Gastro Obscura serves up a loaded plate of incredible ingredients, food adventures, and edible wonders. Ready for a beer made from fog in Chile? Sardinia's "Threads of God" pasta? Egypt's 2000-year-old egg ovens? But far more than a menu of curious minds delicacies and unexpected dishes, Gastro Obscura reveals food's central place in our lives as well as our bellies, touching on history—trace the network of ancient Roman fish sauce factories. Culture—picture four million women gathering to make rice pudding. Travel—scale China's sacred Mount Hua to reach a tea house. Festivals—feed wild macaques pyramid of fruit at Thailand's Monkey Buffet Festival. And hidden gems that might be right around the corner, like the vending machine in Texas dispensing full sized pecan pies. Dig in and feed your sense of wonder. "Like a great tapas meal, Gastro Obscura is deep yet snackable, and full of surprises. This is the book for anyone interested in eating, adventure and the human condition." -Tom Colicchio, chef and activist "This exquisite guide kept me at the breakfast table until dinner time." -Kyle Maclachlan, actor and vintner

Analysis

Malaysia's rainforests are among the oldest in the world and for hundreds of years the Malay people have been using these natural resources to keep themselves feeling happy, healthy, and full of vitality. Health and Beauty from the Rainforest is a lavishly illustrated volume, written by some of the leading experts in the field that reveals the amazing health and beauty secrets of the Malaysian rainforest – including easy-to-follow recipes for natural products that can be made at home!

### **Spatio-Temporal Dynamics and Resource Use in the Canopy** CIFOR

When Mark Heyward first went to Indonesia, to teach at a small school in East Kalimantan, little did he realise how life changing his decision would prove to be. Within three years his Australian life would be behind him and he would be travelling, with fellow adventurers, across remote Indonesian Borneo. The story of that remarkable expedition – a true travel adventure – coalesces with the author's longer journey into the complex heart of Indonesia. It is a journey that spans two decades, that takes the reader from a treasured childhood in Tasmania to a new life in the world's most populous Muslim nation. Along the way the author travels from one end of the archipelago to the other, from the jungles of Kalimantan to the riots and political turmoil of Jakarta. When he meets and falls in love with Sopian, he must make another life changing decision.

### **The Science of Speleology** Del Rey

Outlining the main methods and techniques available to ornithologists, this book brings together in one authoritative source contributions containing information on avian ecology and

conservation.

Giving and Taking from the Natural World Cambridge University Press

This book comprehensively reviews the relationship between micronutrients and brain in health and diseases. It explains the relationship between micronutrients and brain functions, neurogenesis, and cognitive functions. The book also explores the relationship between micronutrients and brain disorders including depression, epilepsy, PD, and Autism. It further explores the recent advancements in understanding the important role of micronutrients as therapeutics in various brain disorders like TBI and AD. Lastly, it presents an overview of micronutrients as neuroprotective agents along with the main principles of nutrigenomics.

*Anthropogenic Tropical Forests* Random House

*Future Foods: Global Trends, Opportunities, and Sustainability Challenges* highlights trends and sustainability challenges along the entire agri-food supply chain. Using an interdisciplinary approach, this book addresses innovations, technological developments, state-of-the-art based research, value chain analysis, and a summary of future sustainability challenges. The book is written for food scientists, researchers, engineers, producers, and policy makers and will be a welcomed reference. Provides practical solutions for overcoming recurring sustainability challenges along the entire agri-food supply chain Highlights potential industrial opportunities and supports circular economy concepts Proposes novel concepts to address various sustainability challenges that can affect and have an impact on the future generations

Bird Ecology and Conservation Texas A&M University Press

An original and magical map of our world and its riches, formed of the stories of the small-scale harvests of seven natural objects In this beguiling book, Edward Posnett journeys to some of the most far-flung locales on the planet to bring us seven wonders of the natural world--eiderdown, edible birds' nests, civet coffee, sea silk, vicuña fiber, vegetable ivory, and guano--that promise ways of using nature without damaging it. To the rest of the world these materials are mere commodities, but to their harvesters they are imbued with myth, tradition, folklore, and ritual, and form part of a shared identity and history. *Strange Harvests* follows the journeys of these uncommon products from some of the most remote areas of the world to its most populated urban centers, drawing on the voices of the people and little-known communities who harvest, process, and trade them. Blending history, travel writing, and interviews, Posnett sets these human stories against our changing economic and ecological landscape. What do they tell us about capitalism, global market forces, and overharvesting? How do local microeconomies survive in a hyperconnected world? Is it possible for us to live together with different species? *Strange Harvests* makes us see the world with wonder, curiosity, and new concern.

A collection of writings by leading experts and newer researchers on the SARS outbreak and its relation to infectious disease management in progressively global and urban societies.

Presents original contributions by scholars from seven countries on four continents Connects newer thinking on global cities, networks, and governance in a post-national era of public health regulations and neo-liberalization of state services Provides an important contribution to the global public debate on the challenges of emerging infectious disease in cities Examines the impact of globalization on future infectious disease threats on international and local politics and culture Focuses on the ways pathogens interact with economic, political and social factors, ultimately presenting a threat to human development and global cities Employs an interdisciplinary approach to the SARS epidemic, clearly demonstrating the value of social scientific perspectives on the study of modern disease in a globalized world

Domesticating Forests: How Farmers Manage Forest Resources  
Oxford University Press

The studies in this volume provide an ethnography of a plantation frontier in central Sarawak, Malaysian Borneo. Drawing on the expertise of both natural scientists and social scientists, the key focus is the process of commodification of nature that has turned the local landscape into anthropogenic tropical forests. Analysing the transformation of the space of mixed landscapes and multiethnic communities—driven by trade in forest products, logging and the cultivation of oil palm—the contributors explore the changing nature of the environment, multispecies interactions, and the metabolism between capitalism and nature. The project involved the collaboration of researchers specialising in anthropology, geography, Southeast Asian history, global history, area studies, political ecology, environmental economics,

plant ecology, animal ecology, forest ecology, hydrology, ichthyology, geomorphology and life-cycle assessment. Collectively, the transdisciplinary research addresses a number of vital questions. How are material cycles and food webs altered as a result of large-scale land-use change? How have new commodity chains emerged while older ones have disappeared? What changes are associated with such shifts? What are the relationships among these three elements—commodity chains, material cycles and food webs? Attempts to answer these questions led the team to go beyond the dichotomy of society and nature as well as human and non-human. Rather, the research highlights complex relational entanglements of the two worlds, abruptly and forcibly connected by human-induced changes in an emergent and compelling resource frontier in maritime Southeast Asia. Chapters 'Commodification of Nature on the Plantation Frontier' and 'Into a New Epoch: The Plantationocene' are available open access under a Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 International License via [link.springer.com](http://link.springer.com).

*A Country Level Perspective* Springer Science & Business Media  
The general interest and attention paid to the use of the renewable natural resources of the world have increased greatly during the last decades. This is due to the environmental dilemma into which mankind has got itself by the total disregard of ecological facts and laws, the underpricing of natural resources and the overemphasis on economic development, coupled with unimpeded rapid population growth and the preponderance of materialistic consumption-oriented attitudes. The management and use of natural resources such as forests, grasslands, rivers

and lakes were formerly considered purely in a financial context, whereas latterly, a consciousness of their social function and the indirect economic benefits which can be derived from them has developed. Thus, as regards these traditional resources, multi-use concepts comprising economically oriented utilisation as well as recreational, educational and social use have become widely accepted. Conservation of natural resources for sustainable consumptive as well as non-consumptive uses has been recognised as a key element for maintaining economic development all over the world. Fortunately, the industrialised countries have started to apply this principle themselves and in their technical and financial aid to the developing Third World countries. This is manifest from policy documents such as the World Bank Policy on Development of Wild Lands, issued in 1987.

**Gross But True Things You'll Wish You Didn't Know** Icon Books

A collection of anecdotes, facts, figures, folklore and literature, *The Nature Magpie* is a veritable treasure trove of humanity's thoughts and feelings about nature. With acclaimed nature writer Daniel Allen as your guide, join naturalists, novelists and poets as they explore the most isolated parts of the planet, choose your side - pineapple or durian - in the great 'king of fruits' debate and discover which plants can be used to predict the weather. Meet the roadkill connoisseurs, learn to dance the Hippopotamus Polka, find out the likelihood of sharing your name with a hurricane - and much more.

**An Indonesian Journey** Springer Nature

The Science Magpie is Simon Flynn's bestselling collection of enthralling facts, stories, poems and more from science's history, from the Large Hadron Collider rap to the sins of Isaac Newton. With Antiques Roadshow regular Marc Allum as your guide, go in search of stolen masterpieces, explore the first museums, learn the secrets of the forgers and brush up on your auction technique with The Antiques Magpie. And with acclaimed nature writer Daniel Allen, join naturalists, novelists and poets as they explore the most isolated parts of the planet and discover which plants can be used to predict the weather in The Nature Magpie.

**They Eat That?: A Cultural Encyclopedia of Weird and Exotic Food from Around the World** BRILL

A fully comprehensive, modern field guide to all of the bird species in Peninsular Malaysia and Singapore. Featuring numerous colour illustrations and detailed descriptions of the key identification features, the book will be equally valuable for ornithologists and birdwatchers.

Workman Publishing

Chimney Swifts, birds that nest and roost in chimneys, have been

historically abundant in North America. But by the late 1980s, the number of swifts migrating to North America from the Amazon River Basin had declined. A growing number of people across North America are now constructing nesting towers and conducting Chimney Swift conservation projects in their own communities. With Chimney Swift Towers, concerned bird conservationists have a step-by-step guide to help them create more habitat for these beneficial, insect-eating birds. Chimney Swift experts Paul and Georgean Kyle give directions for building freestanding wooden towers, wooden kiosk towers, masonry towers, and other structures. Included are - design basics, - lists of materials needed, - useful diagrams and photographs, - and detailed instructions on site preparation, tower construction, installation, and maintenance. Anyone with basic woodworking or masonry skills and an interest in wildlife conservation will find this publication helpful. That includes do-it-yourselfers, homeowners involved in creating backyard habitat for wildlife, landscape and structural architects, park and wildscape managers, wildlife management area professionals, nature centers, garden centers, scout troops, and other civic organizations in search of community service projects.
