Bibliography of Agriculture with Subject Index Springer-Verlag

Der Bestseller im Fachgebiet Augenheilkunde Den kennt jeder, den will jeder haben: Die Klinische Ophthalmologie von Kanski ist seit 25 Jahren der Bestseller weltweit! Denn in diesem Standardwerk finden Sie die gesamte Augenheilkunde so, wie Sie sie brauchen: aktuell, praxisnah und perfekt erklärt. - über 2700 hervorragende Fotos und erklärende Zeichnungen mit gut verständlichem Lehrbuchtext - geschrieben von einem der renommiertesten Experten der Augenheilkunde - Alles über Augenerkrankungen- und störungen finden Sie hier! Die gesamte Augenheilkunde - prägnant geschrieben und brillant illustriert! Seit über 25 Jahren ist Kanskis Klinische Ophthalmologie ein weltweiter Bestseller. Das Werk ist Atlas und Augenheilkunde-Lehrbuch zugleich: kurze und praxisnahe Texte, kombiniert mit über 2700 hochwertigen klinischen Fotos und detaillierten Schemazeichnungen verdeutlichen sowohl bewährte als auch innovative

Verfahren zur Diagnostik und Therapie der Augenerkrankungen und sorgen für maximale Verständlichkeit. Neu in der 7. Auflage: - Alle Inhalte vollständig überarbeitet und aktualisiert - Über 2700 hochwertige Abbildungen, davon 1000 erstmals in dieser Auflage - Aktuelles Management der altersabhängigen Makuladegeneration inkl. VEGF-Inhibitoren-Therapie - Neueste Entwicklungen in der Untersuchung (z. B. OCT) und Behandlung von Netzhaut und Sehnervenerkrankungen - Update der Pharmakotherapie z.B. bei Augeninfektionen und Glaukom - Bewährte und innovative chirurgische Methoden - Kosmetische Chirurgie - Diagnostik und Illustration systemischer Begleiterkrankungen - Zusätzliches Kapitel: Okulare Nebenwirkungen systemischer Medikamente Sowohl für Ärzte in der Ausbildung als auch für praktizierende Ophthalmologen ist dieses Standardwerk ein absolutes Muss!
[Complications of Cataract Surgery](#) Simplifying Phacoemulsification With improved technology, external forces, and new information, your perspective and how you approach surgery will change. This book will help you reevaluate phacoemulsification, and your individual technique. Paul discusses important procedures such as Hydrodissection, Divide & Conquer, the Phaco Chop, Stop & Chop, and now ViscoExpression and Vacuum-Cleaner Phacoemulsification, clarifying each in his

easy to understand style. Phacoemulsification, Fourth Edition

Advances in Ophthalmology and Optometry reviews the most current practices in both ophthalmology and optometry. A distinguished editorial board, headed by Dr. Myron Yanoff, identifies key areas of major progress and controversy and invites expert ophthalmologists and optometrists to contribute original articles devoted to these topics. Broken into sections, the third Volume in the series covers topics within each of the following categories: Optometry, Cataracts, Pediatrics, Ophthalmic Pathology & Ocular Oncology, Vitreoretinal Disease, Glaucoma, Neuro-ophthalmology, Oculoplastics, and Uveitis.

Forthcoming Books SLACK Incorporated

Femtodynamics: A Guide to Laser Settings and Procedure Techniques to Optimize Outcomes with Femtosecond Lasers is a new, comprehensive text that presents a practical approach to optimizing laser settings and procedure techniques for performing LASIK, intracorneal ring segment placement, and other corneal procedures with currently available femtosecond lasers. Dr. Ella Faktorovich has provided detailed photographs and illustrations to demonstrate the techniques for optimizing procedure outcomes. The author guides you step-by-step through common procedures

while providing a detailed approach to managing and preventing possible complications. Topics covered include: - Strategies for centration - Decreasing the incidence of opaque bubble layer formation - Optimizing the energy delivered to the cornea - Improving the quality of dissection As the first book on femtosecond laser application to corneal surgery, *Femtodynamics: A Guide to Laser Settings and Procedure Techniques to Optimize Outcomes with Femtosecond Lasers* is a useful guide for beginning surgeons as well as surgeons looking to develop or enhance their working knowledge of femtosecond lasers.

Power Ultrasonics Elsevier Health Sciences

As plastic surgeons, we seek to combine art and science to improve the results we see in clinical practice. Through our artistic sensibilities, we try to understand and obtain aesthetic results. Scientific analysis provides the data to predict which approaches will be successful and safe. Both art and science connote a high level of skill or mastery. At the present time, our literature is replete with descriptions of specific procedures for body contouring. However, there remains a need for a definitive reference describing the basic principles to address the complete scope of body contouring including the postbariatric patient and their plastic surgery deformities. Dr. Shiffman and Dr. Di Giuseppe saw this need and sought to address the needs of plastic surgeons faced with the complexities of body contouring surgery. This is a comprehensive text aimed at providing multiple perspectives. The numerous sections, which include a- posity and lipolysis, the breast, abdomen, chest, and buttocks, the extremities, and liposuction, offer various approaches from the foremost authors. Indeed it is with a tremendous amount of skill and mastery that Dr. Shiffman and Dr. Di Giuseppe have successfully edited and collated the numerous contributions to this work. In addition, they have authored individually or, in collaboration, over a dozen of the 87 total chapters. Their combined work as editors and authors are evident throughout their text. The final result is a comprehensive contribution that will benefit all plastic surgeons seeking to improve their approach to body contouring.

Echokardiographie Gale Cengage

Between a global pandemic, aging population, and labor shortages, there is an ongoing spike in the demand for healthcare that cannot be satisfied with traditional methods and the human workforce. Robotic technology offers a solution to this dilemma; applying robotics to healthcare is an active area of research that has begun to be widely commercialized. While there are many potential avenues for robots to improve health and well-being, my research has focused on two areas in particular: the development of robotic hand exoskeletons for rehabilitation and the enhancement of robotic surgery via automation and sensor development. Exoskeletons have been shown to be effective for use in physical rehabilitation of numerous conditions including spinal cord injury and stroke. However, at present, the huge majority of exoskeleton systems are constructed for only the arm (from shoulder to wrist), back, lower limbs, or hands. Few systems have been developed that combine both full arm and hand systems, and those that do generally have limited actuation of the hand. This is partly because the mechanical complexity of the hand requires rigid hand exoskeletons to be complex and bulky if they are able to control many of the important degrees of freedom. This bulk and complexity makes the hand systems challenging to successfully integrate onto the distal end of an arm exoskeleton. However, there is significant demand for combined arm and hand rehabilitation exoskeletons because many activities of daily living, that physical therapy focuses on retraining, require reaching and grasping together. The overarching goals of this research are to develop a novel hand exoskeleton, experimentally evaluate its capabilities in preparation for application to stroke rehabilitation, and integrate it on the existing EXO-UL8 and concurrently developed BLUE SABINO upper limb exoskeleton systems. Chapter 1 provides an introduction on hand exoskeleton systems, with a focus on those designed for rehabilitation. My work on hand exoskeletons started by inheriting a hand exoskeleton mechanical design from Brando Dimapasoc, a graduating Master's Degree student, that was developed as part of NSF Award #1532239. The system was intended to be attached to the EXO-UL8 and BLUE SABINO arm exoskeletons, had six active and six passive degrees of freedom, had three reconfigurable linkages to control the thumb and two groupings of fingers, used a Bowden cable transmission system to enable remote placement of actuators, and was optimized to fit 90% of the general population. However, the design had only been tested as a 3D-printed prototype in a modified and simplified form. Further, the necessary electronic hardware (other than motor and sensor selection) and control software had not been started. Thus, the first stage of my research was to bring this first-generation hand exoskeleton to a functional state. This involved the mechanical assembly, the electrical design and assembly, and the software and control

development of the system. Through testing, it was determined that a significant number of improvements must be made to the system in order for it to be suitable for use. Details of this work are contained in Chapter 2. With the lessons learned from development and testing of the first-generation hand exoskeleton, the next stage of my research involved the nearly complete redesign of the system in order to create the second-generation hand exoskeleton named the "Opposable-Thumb Hand Exoskeleton for Rehabilitation" or "OTHER Hand". As the name implies, the system is designed to control opposition/reposition of the thumb in addition to the flexion/extension of each digit. This is a notable feature, not only because of the importance of opposition/reposition in many grasping tasks, but also because only a handful of exoskeletons in the literature control this motion. The OTHER Hand shares a number of features with the first generation system, though the execution of each is different. It attaches to both the EXO-UL8 and BLUE SABINO arm exoskeletons, is actuated using a Bowden Cable transmission such that the motor pack can be located remotely, has three reconfigurable linkages to control the thumb and two groupings of fingers in order to enable nearly all grasps, and is optimized to fit 90% of the population. The system has six active and eight passive degrees of freedom per hand. Chapter 3 documents the design of the OTHER Hand. Due to the numerous novel design choices made for the OTHER Hand, combined with the mechanical complexity of the hand in general, and thumb in particular, it is not feasible to know with certainty the types of grasps that can be actuated in the exoskeleton for the wide range of hand shapes and sizes. As such, it is necessary to validate the design of the OTHER Hand through testing with a group of subjects. This was accomplished through adaptation of the Anthropomorphic Hand Assessment Protocol for use with an exoskeleton to test the ability of thirteen subjects to grasp and manipulate 25 objects of the Yale-Carnegie Mellon-Berkeley Object Set using eight prehensile grasps and two non-prehensile hand postures. Additionally, the OTHER Hand was mounted on the EXO-UL8, and both systems were manually controlled to verify compatibility, workspace, and ability to bi-manually grasp a sample object. Chapter 4 presents the testing protocol and results. While exoskeletons for rehabilitation is an increasingly popular research area, robotic surgical platforms already have widespread commercial use and profound effects on clinical outcomes. Classically, these systems are controlled directly by a surgeon at a console in the same or adjacent room. They can augment the senses and movement precision of the surgeon during open or laparoscopic surgery in order to enhance the surgeon's skills. However, surgeons commonly work exceptionally long hours in an environment where a single mistake can be fatal. Additionally, certain surgical subtasks are time-consuming, repetitive, and common to many different operations. Automating these subtasks has the potential to reduce the burden on surgeons while standardizing outcomes. Automation of one such subtask, soft tissue manipulation, is described in Chapter 5. Cataract surgery ranks among the most common operating room procedures worldwide. The aim of the surgery is to replace the clouded biological lens with a clear synthetic lens. Despite the prevalence, this operation is currently performed manually by a surgeon, and generally is fast, standardized, and safe. However, the human body is notably non-optimal for performing cataract surgery due to the transparency and fragility of the tissues of the eye. In order to remove the lens, it is standard to break it apart with phacoemulsification, use an irrigation/aspiration handpiece to aspirate the lens material, and then polish any remaining lens material from the capsular bag. Unfortunately, the back of this bag, the posterior capsule, is transparent, mere microns thin, and easily ruptured from contact, ultrasound energy, or pressure. Rupturing the posterior capsule causes the vitreous of the inner eye to spill out, resulting in critical failure of the surgery. Additional information about the location of the tool tip within the eye could be used to reduce the risk of such a failure. To this end, a proof-of-concept modification of a tool to add bioelectrical impedance sensing and tissue classification was developed and tested on porcine eyes. This research is summarized in Chapter 6

Management of Complications in Ophthalmic Surgery Georg Thieme Verlag

This comprehensive, authoritative text presents the scientific foundations and clinical practice of neural blockade in both regional anesthesia and the management of pain. The descriptions and illustrations of pain mechanisms are considered classic examples. The Fourth Edition has been refined for clarity and flows logically from principles and pharmacology, to techniques for each anatomic region, to applications. This edition has two new co-editors and several new chapters on topics including neurologic complications, neural blockade for surgery, treatment of pain in older people, and complications in pain medicine. A companion Website will offer the fully searchable text and an image bank.

Advances in Ophthalmology and Optometry 2019 SLACK Incorporated

Cataracts are a very common condition whereby the lens of the eye becomes cloudy causing blurred vision. Over time, a cataract can get worse, eventually leading to blindness if untreated. Cataracts are the most common cause of blindness worldwide. Phacoemulsification surgery is the most widely used method for cataract management. Simplified Phacoemulsification is a step by step guide to the complete technique of phacoemulsification. Beginning with an introduction to the anatomy and development of the lens, patient selection and the phacoemulsification machine used in the procedure, the following chapters describe the complete process from anaesthesia, suturing and incision, through the different basic and technical aspects of the technique. The final section examines instruments used for phaco surgery. Written in an easy to read, short note format, this comprehensive manual includes more than 280 full colour images and figures to enhance learning. Key points Step by step guide to phacoemulsification Covers complete process from basic anatomy and development, to anaesthesia and suturing, and technical aspects of the procedure Easy to read, short note format Includes more than 280 full colour images, figures and illustrations

American Book Publishing Record Springer-Verlag

*A unique synthesis of techniques and experience and a synopsis of the complications that can occur during cataract surgery *Provides step-by-step procedures, practical advice and is illustrated with clinical examples This is an essential text for all ophthalmic surgeons enabling them to tackle the complications of the surgical procedures that they perform *As surgical training becomes increasingly specialised, this book provides the ophthalmic surgeon with the essential knowledge they need in this climate of evidence-based practice, clinical competency and litigation CONTENTS: Introduction; Anticipation and patient assessment; Anaesthetic complications; Incision phase; Phaco phase; Implantation (in difficult circumstances); Wound closure; Converting phaco-to ECCE; Suprachoroidal haemorrhage; Postoperative problems and their management; Patient handling; Clinical governance; Suggested reading; Index

Cumulated Index Medicus Lippincott Williams & Wilkins

A world list of books in the English language.

Phacoemulsification, Fourth Edition Lippincott Williams & Wilkins

Written by the foremost experts from leading eye clinics worldwide, this four-volume work is the most comprehensive and current reference in ophthalmology. The international representation of the 267 contributors ensures complete coverage of the broad array of contemporary technologies and techniques, including the latest innovations in vitreoretinal, cataract, and refractive surgery. In 324 chapters, this encyclopedic text covers every area of ophthalmology--basic sciences, optics and refraction, neuro-ophthalmology, strabismus, lids, adnexa and orbit, external eye diseases, cornea, refractive surgery, glaucoma, lens, uveal tract, ocular therapeutics, retina and vitreous, systemic diseases, and miscellaneous topics. Thousands of superb illustrations enable readers to visualize surgical techniques.

Augenheilkunde in focus JP Medical Ltd

Femtosecond cataract surgery is the next step in the evolution of cataract surgery. In *Femtosecond Cataract Surgery: A Primer*, Dr. Louis E. Probst and Dr. Clara C. Chan lead the way by bringing together current technology and clinical experience to provide a concise yet comprehensive overview on this ground-breaking technique. *Femtosecond Cataract Surgery: A Primer* is composed of clinical chapters written by 18 of the world's leading experts who have pioneering, hands-on experience performing the procedure paired with chapters on the technology of each of the 4 current systems. Intraoperative and clinical photographs further showcase the most up-to-date techniques and clinical experiences in each of the systems, as well as illustrations of their unique and common characteristics. Features include the following: • New data presented in a companion table format to evaluate the different technologies • Consistent representation of each system • First-hand knowledge from expert international surgeons Additionally, a comparison table has been constructed with the most recent information offering clear differentiation on the techniques and technologies of each system. The table also tracks each system's progression in the approval system in the United States and Europe. The final chapter in *Femtosecond Cataract Surgery: A Primer* serves as an update on the current investigations of presbyopia treatment with femtosecond lasers. Providing a wealth of new data in a concise and organized format, *Femtosecond Cataract Surgery: A Primer* is an indispensable resource for ophthalmologists, cataract surgeons, optometrists, and other professionals in the eye care industry.

Ganzheitliches Life Cycle Management Elsevier Health Sciences

Wenn Unternehmen die Anforderungen einer nachhaltigen Entwicklung umsetzen, stehen sie vor der zentralen Aufgabe, Produkte und Prozesse lebensphasenübergreifend zu betrachten. Der Autor

stellt die Gestaltungsmöglichkeiten des Life Cycle Managements vor und unterscheidet zwischen lebensphasenbezogenen Disziplinen wie z. B. dem Produkt- und Produktions-Management sowie lebensphasenübergreifenden Disziplinen (z. B. Informations- und Wissensmanagement). Zahlreiche Anwendungsbeispiele und Abbildungen dienen der Veranschaulichung der Inhalte.

Foldable Intraocular Lenses JP Medical Ltd

Der Atlas der Standardeingriffe der laparoskopisch-urologischen Chirurgie! Sie sind Urologe und wollen laparoskopische Operationen durchführen? Hier finden Sie Schritt-für-Schritt-Anleitungen aller laparoskopisch durchgeführten Standardeingriffe in der Urologie: Präoperative Vorbereitung Indikationen und Kontraindikationen Operationstechnik Postoperatives Management und Nachsorge Die Operationstechnik wird dabei mit vielen detaillierten Abbildungen zu jedem Schritt illustriert. Die einheitliche Struktur erleichtert das Einfinden in die verschiedenen OP-Techniken. Ob Nephropexie, Nierenteilresektion oder totale Prostatektomie - hier finden Sie die alle Einzelheiten, die Sie zur erfolgreichen laparoskopisch-operativen Therapie Ihrer Patienten benötigen. Die praktische Anleitung zur Anwendung des DaVinci-Systems bei Indikationen wie der roboterassistierten radikalen Prostatektomie, Eingriffen an der Niere oder der radikalen Zystoprostatovesiculektomie runden das Buch ab.

[Cousins and Bridenbaugh's Neural Blockade in Clinical Anesthesia and Pain Medicine](#)

"Elsevier,Urban&FischerVerlag"

A guide to programs currently available on video in the areas of movies/entertainment, general interest/education, sports/recreation, fine arts, health/science, business/industry, children/juvenile, how-to/instruction.

Yonsei Medical Journal Springer-Verlag

This 25th anniversary edition of the definitive reference for cataract surgery has been completely updated, while retaining its unique blend of academic and practical material. More than just a "how to do it" book, this text offers pathogenesis and pathophysiology of complications, as well as practical advice and strategies on surgical technique. All chapters have been extensively revised, with replacement of outdated material and illustrations to keep the text as concise and clinically useful as possible. Contains fully updated and comprehensive information on what is still the most frequently performed procedure in ophthalmology today. Unique academic approach to the subject presents the pathogenesis and pathophysiology of the complications of cataract surgery. Authors are authorities in the field who provide expert information and guidance on both surgical techniques and complications. Highly illustrated with 100 new line drawings and state-of-the-art surgical photographs in a fully updated color section. Co-authored by two renowned academicians

-- sons of the highly respected Dr. Norman Jaffe -- who lend their expertise to this classic reference. Includes an extensively revised, full-colour section on the latest advances in surgical technique. Highly illustrated with newly rendered drawings of the latest procedures in cataract surgery. Features new chapters on postoperative strabismus, atonic pupil, capsule contraction syndrome, and malpositions of intraocular lenses. Maintains the manageable size of the previous edition through elimination of obsolete material and outdated techniques.

Dual Reconfigurable Exoskeleton Hand System with Opposable Thumbs

Elsevier,Urban&FischerVerlag

Präzise Kenntnisse der Anatomie und Topographie gehören zu den wichtigsten Grundlagen, auf die sich Chirurgen bei arthroskopischen Gelenkeingriffen verlassen. Jedoch kann es immer wieder auch eine Herausforderung sein, sich im Bereich der Gelenke zu orientieren. Knapp 500 herausragende Abbildungen aus Anatomie und Operationssaal helfen, die Lage der großen Gelenke des Körpers - Schulter-, Ellenbogen-, Hand-, Hüft-, Knie- und Sprunggelenk sowie deren umliegende Strukturen zu lokalisieren. Sie erhalten unverzichtbare technische Tipps und wertvolle Hinweise zur Vermeidung von Verletzungen neurovaskulärer Strukturen, z.B. durch arthroskopische Instrumentierung während der Portalanlage. Neben den strukturierten Detailinformationen, z.B. zu diagnostischen und therapeutischen Indikationen, sehen Sie großformatige arthroskopische Aufnahmen in bester Qualität. Jederzeit zugreifen: Der Inhalt des Buches steht Ihnen ohne weitere Kosten digital in der Wissensplattform eRef zur Verfügung (Zugangscode im Buch). Mit der kostenlosen eRef App haben Sie zahlreiche Inhalte auch offline immer griffbereit.

Chirurgie de la cataracte Elsevier,Urban&FischerVerlag

Ce livre+ebook a pour objet l'enseignement par la vidéo des interventions chirurgicales de cataractes standard, difficiles, compliquées ou associées à d'autres pathologies. Il inclut également les nouvelles technologies dont le laser femtoseconde. Les interventions chirurgicales sont présentées étape par étape à travers plus de 290 séquences vidéo, toutes détaillées dans la table des vidéos et appelées au fil du texte. Elles illustrent la spécificité et la diversité possible des gestes chirurgicaux, les complications chirurgicales pendant l'opération et postopératoires, et les ajustements spécifiques liés à ces complications. Ces vidéos s'accompagnent d'un texte précis qui, pour chaque geste, fixe les objectifs à atteindre, souligne les difficultés à surmonter, précise les écueils à éviter, délivre les « trucs et astuces » des meilleurs chirurgiens. L'objectif est de fournir une conduite à tenir pratique, permettant d'améliorer l'efficacité et la sécurité de chaque phase des interventions classiques, en présentant un état de l'art et les prérequis, mais aussi d'évoquer les éléments nécessaires en cas de difficulté, en insistant sur la gestion des complications. Fruit

des expériences chirurgicales des meilleurs spécialistes français de la discipline, l'ouvrage est conçu comme un guide utile pour les chirurgiens débutants autant que confirmés. Dans la lignée de Chirurgie du glaucome de Jacques Laloum et Pierre-Yves Santiago, ce livre+ebook constitue une référence absolue dans le domaine de la pédagogie chirurgicale.

Subject Guide to Books in Print Georg Thieme Verlag

Power Ultrasonics: Applications of High-Intensity Ultrasound, Second Edition provides a comprehensive reference on the fundamentals, processing, engineering, medical, food and pharmaceutical applications of ultrasonic processing. Chapters cover the fundamentals of nonlinear propagation of ultrasonic waves in fluids and solids, discuss the materials and designs of power ultrasonic transducers and devices, identify applications of high power ultrasound in materials engineering and mechanical engineering, food processing technology, environmental monitoring and remediation and industrial and chemical processing (including pharmaceuticals), medicine and biotechnology, and cover developments in ultrasound therapy and surgery applications. The new edition also includes recent advances in modeling, characterization and measurement techniques, along with additive manufacturing and micromanufacturing. This is an invaluable reference for graduate students and researchers working in the disciplines of materials science and engineering. In addition, those working on the physics of acoustics, sound and ultrasound, sonochemistry, acoustic engineering and industrial process technology, R&D managers, production, and biomedical engineers will find it useful to their work. Covers the fundamentals of nonlinear propagation of ultrasonic waves in fluids and solids Discusses the materials and designs of power ultrasonic transducers and devices Considers state-of-the-art power sonic applications across a wide range of industries

[Autismus-Spektrum-Störungen](#) Woodhead Publishing

Management of Complications in Ophthalmic Surgery examines all the major complications of ophthalmic surgery such as penetrating keratoplasty, postoperative endophthalmitis, anesthetic complications, glaucoma and suprachoroidal hemorrhage. It also includes other important complications that have gained relevance in recent years such as laser complications, optical complications after LASIK, complications during phacoemulsification and complications associated with new techniques in refractive surgery.

Springer-Verlag

Dieser bewährte Praxisleitfaden ermöglicht es dem Leser, selbst einen individuell abgefassten, "maßgeschneiderten", erfolgreichen Business- und Geschäftsplan zu erstellen, der strengsten Anforderungen genügt. Mit vielen Beispielen, Checklisten und nützlichen Praxistipps.
