Presents the complete idiot's guide to collecting research including advice on drafting a document, summarizing and paraphrasing, primary and secondary sources, and plagiarism. Research Involving Human Biological Materials: Commissioned papers. Privacy and the analysis of stored tissues Penguin
What are the moves that an academic writer makes? How does writing as an intellectual change the way we work from sources? In *Rewriting*, a textbook for the undergraduate classroom, Joseph Harris draws the college writing student away from static ideas of thesis, support, and structure, and toward a more mature and dynamic understanding. Harris wants college writers to think of intellectual writing as an adaptive and social activity, and he offers them a clear set of strategies—a set of moves—for participating in it.

A valuable new edition of a standard reference The use of statistical methods for categorical data has increased dramatically, particularly for applications in the biomedical and social sciences. An Introduction to Categorical Data Analysis, Third Edition summarizes these methods and shows readers how to use them using software. Readers will find a unified generalized linear models approach that connects logistic regression and loglinear models for discrete data with normal regression for continuous data. Adding to the value in the new edition is:

- Illustrations of the use of R software to perform all the analyses in the book
- A new chapter on alternative methods for categorical data, including smoothing and regularization methods (such as the lasso), classification methods such as linear discriminant analysis and classification trees, and cluster analysis
- New sections in many chapters introducing the Bayesian approach for the methods of that chapter
- More than 70 analyses of data sets to illustrate application of the methods, and about 200 exercises, many containing other data sets
- An appendix showing how to use SAS, Stata, and SPSS, and an

appendix with short solutions to most odd-numbered exercises Written in an applied, nontechnical style, this book illustrates the methods using a wide variety of real data, including medical clinical trials, environmental questions, drug use by teenagers, horseshoe crab mating, basketball shooting, correlates of happiness, and much more. An Introduction to Categorical Data Analysis, Third Edition is an invaluable tool for statisticians and biostatisticians as well as methodologists in the social and behavioral sciences, medicine and public health, marketing, education, and the biological and agricultural sciences.

The Second Edition of Johnny Saldaña's international bestseller provides an in-depth guide to the multiple approaches available for coding qualitative data. Fully up to date, it includes new chapters, more coding techniques and an additional glossary. Clear, practical and authoritative, the book: -describes how coding initiates qualitative data analysis -demonstrates the writing of analytic memos -discusses available analytic software -suggests how best to use *The Coding Manual for Qualitative Researchers* for particular studies. In total, 32 coding methods are profiled that can be applied to a range of research genres from grounded theory to phenomenology to narrative inquiry. For each approach, Saldaña discusses the method's origins, a description of the method, practical applications, and a clearly illustrated example with analytic follow-up. A unique and invaluable reference for students, teachers, and practitioners of qualitative inquiry, this book is essential reading across the social sciences.

This timely and engaging text offers students a social perspective on food, food practices, and the modern food system. It engages readers' curiosity by highlighting several paradoxes: how food is both mundane and sacred, reveals both distinction and conformity, and, in the contemporary global era, comes from everywhere but nowhere in particular. With a social constructionist framework, the book provides an empirically rich, multi-faceted, and coherent introduction to this fascinating field. Each chapter begins with a vivid case study, proceeds through a rich discussion of research insights, and ends with discussion questions and suggested resources. Chapter topics include food's role in socialization, identity, work, health and social change, as well as food marketing and the changing global food system. In synthesizing insights from diverse fields of social inquiry, the book addresses issues of culture, structure, and social inequality throughout. Written in a lively style, this book will be both accessible and revealing to beginning and intermediate students alike.

Doing History SAGE

Original, fresh and relevant this is a theoretically-informed practical guide to researching social relations. The text provides a mixed methods approach that challenges historical divisions between quantitative and qualitative research. It adopts a multidisciplinary approach to social science research, drawing from areas such as sociology, social psychology and social anthropology. Explicitly addressing the concerns of emergent researchers it provides both a 'how to' account of social research and an understanding of the main factors that contextualize research by discussing 'why do' social scientists work this way. Throughout the twelve comprehensive chapters procedural (how to) accounts and contextual (why do) issues are usefully applied to major themes and substantive questions. These key themes include: (1) Research design (2) The practices of research and emergent researchers: Beyond ontology, epistemology and methodology (3) The impact of technology on research (4) Putting the research approach in context. A superb teaching text this book will be relished by lecturers seeking an authoritative introduction to social research and by students who want an accessible, enriching text to guide and inspire them.

The New York Times bestseller: "You gotta read this. It is the most exciting book about Pluto you will ever read in your life." —Jon Stewart When the Rose Center for Earth and Space at the American Museum of Natural History reclassified Pluto as an icy comet, the New York Times proclaimed on page one, "Pluto Not a

Planet? Only in New York." Immediately, the public, professionals, and press were choosing sides over Pluto's planethood. Pluto is entrenched in our cultural and emotional view of the cosmos, and Neil deGrasse Tyson, award-winning author and director of the Rose Center, is on a quest to discover why. He stood at the heart of the controversy over Pluto's demotion, and consequently Plutophiles have freely shared their opinions with him, including

endless hate mail from third-graders. With his inimitable wit, Tyson delivers a minihistory of planets, describes the oversized characters of the people who study them, and recounts how America's favorite planet was ousted from the cosmic hub.
