 Airline Management Finance: The Essentials is of significant benefit to airline industry practitioners seeking a focused, neatly contained and accessible resource that provides explicit financial information pertinent to their current or future role. The book explains and de-mystifies an airline's financing and the financial reporting of its operations to airline staff and others. It seeks to explain the role of finance and the Finance Department in a non-technical way, so staff can appreciate the value of the department and its information resources, and see finance as an active contributor to the airline's operation. It concentrates on practical matters, explaining frequently used financial and accounting terms, how financial strategy works, the uses of various types of financial reporting, as well as what financial risk is and how it can be managed through the co-operation of finance and operating staff. Staff who understand the airline's finances and financial system are more likely to make decisions which align with the airline's strategy and objectives. They will also know how to use the financial information which is available. The book establishes a good foundation of financial knowledge for all staff. This book is recommended reading for new employees in airline finance and related areas, as well as those starting to move up the supervisory ladder in an airline.

Critical Issues in Air Transport Economics and Business Routledge

Drawing on recent developments in the services management, strategic management and brand management literatures, this stimulating and well-illustrated book presents critical new approaches to developing customer-centered airline strategies. Designed for a wide audience of aviation management students and professionals it acts as a linking text, using a services management approach to integrate strategy, marketing, human resources management and operations. Written in an accessible and practical style, it is the first book to draw together a broad range of knowledge from contemporary management fields to produce a framework specifically relevant to the airline industry. It is an unparalleled resource for students and airline managers alike.

Methodology and Practice Routledge

There are few industries that have had a more profound impact on business and society over the last century than aviation. This book is an accessible, up-to-date introduction to the current state of the aviation industry which provides readers with the tools necessary to understand the volatile and often complicated nature of airline finance. Understanding finance is critical in any industry; however, the financial track record of the airline industry places even more importance on effective financial management. Foundations of Airline Finance provides an introduction to the basics of finance – including time value of money, the valuation of assets, and revenue management – and the particular intricacies of airline finance where there can be wild fluctuations in both revenues and costs. The third edition of this text has been extensively updated to reflect the many changes in the air transport industry that have taken place since the publication of the second edition, and features an expanded chapter on aircraft leasing and many new international case examples. This thorough introduction to aviation finance is valuable reading as a general, introductory financial text, or as reading in specialized airline finance classes.

Advances in Management Accounting Beard Books

Globalization is a pervasive feature of recent industrial and commercial developments, not least in the airline business with concomitant effects on human resource management. This book focuses on the organization and human resource changes that have taken place in the international airline industry in recent years. It provides an extensive analysis of airline organization and external relations, airline organization and internal relations, changes in industrial relations and human resource management and also, the integration of human resource management and other management functions. The authoritative second edition of an already established work that covers both theory and practice, this book will be of great interest to managers in all areas of the airline industry, as well as to students of air transport and personnel/human resource management.

Air Transportation Greenwood Publishing Group

Air transport industry finance, with its complexity and special needs such as route rights, airport slots, aircraft leasing options and frequent flyer programmes, requires specific knowledge. While there are numerous financial management and corporate finance texts available, few of these provide explanations for the singularities of the airline industry with worked examples drawn directly from the industry itself. Revised and updated in its fourth edition, this internationally renowned and respected book provides the essentials to understanding all areas of airline finance. Designed to address each of the distinct areas of financial management in an air transport industry context, it also shows how these fit together, while each chapter and topic provides a detailed resource which can be also consulted separately. Supported at each stage by practical airline examples, it examines the financial trends and prospects for the airline industry as a whole, contrasting the developments for the major regions and airlines. Important techniques in financial analysis are applied to the airline industry, together with critical discussion of key issues. Thoroughly amended and updated throughout, the fourth edition reflects the many developments that have affected the industry, with a particular emphasis on the full impact of the global banking and sovereign debt crises. This edition also features new material discussing the increased airline mergers and acquisitions (M&A) activity of recent years, and considers the likelihood of further consolidation in the future. The book is a key resource for students of airline management, and a sophisticated and authoritative guide for analysts in financial institutions and consultancies, executives in airlines and related industries, and civil aviation departments.

Business Management in Transport 3 Routledge

Commercial air transport is a global multimillion dollar industry that underpins the world economy and facilitates the movement of over 3 billion passengers and 50 million tonnes of air freight worldwide each year. With a clearly structured topic-based approach, this textbook presents readers with the key issues in air transport management, including: aviation law and regulation, economics, finance, airport and airline management, environmental considerations, human resource management and marketing. The book comprises carefully selected contributions from leading aviation scholars and industry professionals worldwide. To help students in their studies the book includes case studies, examples, learning objectives, keyword definitions and 'stop and think' boxes

to prompt reflection and to aid understanding. Air Transport Management provides in-depth instruction for undergraduate and postgraduate students studying aviation and business management-related degrees. It also offers support to industry practitioners seeking to expand their knowledge base.

In recent years the airline industry has experienced severe volatility in earnings, with airlines recording periods of substantial profits that are closely followed by periods of financial distress. This trend has continued into the new millennium, with numerous examples of airlines across the globe entering bankruptcy protection or liquidating. The text provides an introduction to both the basics of finance and the particular intricacies of airline finance where there can be significant fluctuations in both revenues and costs. This new edition also includes: capital budgeting management of current assets financial risk analysis fuel hedging aircraft leasing This textbook contains chapters that cover unique aspects of the aviation financial decision-making process. These include a rigorous and structured presentation of the buy versus lease decision that is prevalent in the industry, a valuation process for aviation assets, the recent trend toward privatization and the difficulty inherent in the valuation of a publicly-owned or semi-publicly owned asset. The *Foundations of Airline Finance*, now in its second edition, is an introductory text that can be used either as a general financial text or in a specialized class that deals with aviation finance in particular.

The Essentials Airline Management Finance *The Essentials*

Foundations of Airline Finance: Methodology and Practice is a textbook that comprehensively covers, at a basic level, all aspects of the subject, bringing together many of the numerous and informative articles and institutional developments that have characterized the field of airline finance in the previous two decades. In the early chapters, the reader is introduced to the elementary theoretical foundations that underpin the role of finance in the airline industry. Critical topics, such as the time value of money, the notion of risk and return, and the complex nature of costs (fixed, semi-fixed, variable, and marginal) are discussed and illustrated with concrete examples. This is followed by an in-depth presentation of the role of accounting in airlines. Ratio analysis is used to further analyze airline financial statements. Airline industry specific metrics, such as cost per available seat mile (CASM) and revenue per revenue passenger mile (RRPM), are covered. The role of capital and asset management is then explained in the following chapters. The final chapters of the text present some important practical applications of the theoretical ideas presented earlier; these applications include hedging, the buy versus lease decision for aircraft and the question of the valuation of assets (mainly aircraft). Moreover, specific methods for actually calculating internal valuation are presented and evaluated. *Foundations of Airline Finance: Methodology and Practice* will be of greatest value to students who are contemplating entering financial management in the air transportation industry; however, the text will also serve as an accessible and comprehensive reference for industry professionals.

Although introductions to courses in finance exist for a variety of fields, Robert W. Kaps provides the first text to address the subject from an aviation viewpoint. Relying on his vast experience--twenty-plus years in the airline industry and more than thirty years in aviation--Kaps seeks not only to prepare students for careers in the aviation field but also to evoke in these students an excitement about the business. Specifically, he shows students how airlines, airports, and aviation are financed. Each chapter contains examples and illustrations and ends with suggested readings and references. Following his discussion of financial management and accounting procedures, Kaps turns to financial management and sources of financial information. Here he discusses types of business

organizations, corporate goals, business ethics, maximizing share price, and sources of financial information. Kaps also covers debt markets, financial statements, air transport sector revenue generation, and air transport operating cost management, including cost administration and labor costs, fuel, and landing fees and rentals. He describes in depth air transport yield management systems and airport financing, including revenues, ownership, operations, revenue generation, funding, allocation of Air Improvement Program funds, bonds, and passenger facility charges. Kaps concludes with a discussion of the preparation of a business plan, which includes advice about starting and running a business. He also provides two typical business plan outlines. While the elements of fiscal management in aviation follow generally accepted accounting principles, many nuances are germane only to the airline industry. Kaps provides a basic understanding of the principles that are applicable throughout the airline industry.

Anyone becoming a company director faces a steep learning curve; this book will give every director and especially one joining the board of an airline, a head-start on the process. *Airline Governance: The Right Direction* will help existing directors, those who have been newly appointed and those 'in waiting' in a company's management. This book reviews the fundamentals of corporate governance and puts them into the context of guiding, directing and managing an airline, and also complements the discussion of accounting and finance in its sister book *Airline Management Finance: The Essentials*. The detailed review will give directors confidence to make decisions on governance matters, avoiding a 'tick the box' approach and focusing on what is important. This book not only gives directors a comprehensive introduction to good governance, but also discusses the application of the principles of governance for an airline at various stages of its development so any changes can be made at the right time. Understanding corporate governance not only helps directors, but also an airline's senior and junior management, because the considerations around matters such as 'conflict of interest' apply to all decision-makers in the organisation. Understanding and applying good governance does not guarantee success, but it surely helps in achieving it.

Aircraft values are key to aircraft financing decisions: Aircraft values act as a source of security for providers of debt capital and lessors failing to re-place aircraft, and as a source of upside potential to equity investors. Yet, aircraft values cannot be precisely and continuously monitored. This is because neither actual primary nor secondary aircraft transaction prices are disclosed. Various types of third party valuation estimates exist, but relying solely on third party appraisals seems insufficient considering the volumes and durations of aircraft financing arrangements. The author thus proposes an aviation industry-research framework to opine on aircraft values. The framework is based on extensive research on the role of aircraft values in various current financing techniques and the dynamics of aircraft values. It suggests a combination of aircraft analysis, airline analysis and behavioral analysis to complement third party appraisals. The book is designed as a resource for students in business administration and economics and offers a scientific perspective on aircraft values for financial analysts, aviation consultants and airline financial managers.
