Completely up-to-date
coverage of water
treatment facility
design and operation
This Second Edition of
Susumu Kawamura's

landmark volume offers comprehensive coverage of water treatment facility design, from the basic principles to the latest innovations. It covers a broad spectrum of water treatment process designs in detail and offers clear guidelines on how to choose the unit, process, and equipment that will maximize overall efficiency and minimize maintenance costs. This book also explores many important operational issues that affect today's plant operators and facility designers. This new edition introduces several new subjects, including value engineering, watershed management, dissolved air flotation process, filtered

reservoir (clearwell) design, and electrical system design. It provides expanded and updated coverage of objectives for finished water quality, instrumentation and control, disinfection process, ozonation, disinfection by-product control, the GAC process, and the membrane filtration process. Other important features of this Second Edition include: * Practical guidance on the design of every water treatment plant component * New information on plant layout, cost estimation, sedimentation issues, and more * English and SI units throughout * Help in designing for compliance with water treatment-related government regulations

Supplemented with hundreds of illustrations, charts, and tables, Integrated Design and Operation of Water Treatment Facilities, Second Edition is an indispensable, hands-on resource for civil engineers and managers, whether working on new facilities or redesigning and rebuilding existing facilities.

The Wireless World and Radio Review

Electric fences are often an inexpensive and effective way to control livestock. The AgGuide to Electric Fencing has 14 chapters including: · Electric fences—can they help you? · How they work · Safety · Planning the fence · Materials · Gates · Reinforcing fences · Temporary fences · Building the fence · Testing the fence · Special circumstances · Training paddocks · Animals controlled · Step by step construction · Useful terms and definitions

This book is a companion title to AgGuide – Fencing. AgGuides are compiled by highly regarded industry experts to provide easy to follow advice on agriculture

and support the Tocal College external study program for agriculture.

High Speed Pulse Technology: Volume II: Optical Pulses - Lasers - Measuring Techniques focuses on the theoretical and engineering problems

that result from the capacitor discharge technique. This book is organized into three main topics: light flash production from a capacitive energy storage; signal transmission and ranging systems by capacitor discharges and lasers; and impulse measuring technique. This text specifically discusses the air spark under atmospheric conditions, industrial equipment for laser flashing, and claims for light transmitting system. The application of light impulse signal transmission, impulse measurements by means of spark gaps, and conversion factors of various energy units are also described. This publication is recommended for

eager electrical engineering and physics students interested in optical pulses, lasers, and measuring techniques.
