[You Are Here](#) W. W. Norton & Company

This updated edition by one of the world's leading apologists presents a systematic, positive case for Christianity that reflects the latest work in the contemporary hard sciences and humanities. Brilliant and accessible.

Man's Descent from the Stars W. W. Norton & Company

Contributors include Paul Davies, George Ellis, Owen Gingrich, Robert Herrmann, Harold Koenig, Arthur Peacocke, John Polkinghorne, and Keith Ward.

Believing Is Seeing Word for Today

NEW YORK TIMES BESTSELLER • A captivating exploration of deep time and humanity's search for purpose, from the world-renowned physicist and best-selling author of *The Elegant Universe*. "Few humans share Greene's mastery of both the latest cosmological science and English prose." —The New York Times *Until the End of Time* is Brian Greene's breathtaking new exploration of the cosmos and our quest to find meaning in the face of this vast expanse. Greene takes us on a journey from the big bang to the end of time, exploring how lasting structures formed, how life and mind emerged, and how we grapple with our existence through narrative, myth, religion, creative expression, science, the quest for truth, and a deep longing for the eternal. From particles to planets, consciousness to creativity, matter to meaning—Brian Greene allows us all to grasp and appreciate

our fleeting but utterly exquisite moment in the cosmos.

A Physicist Examines the Big Bang and the Bible EP BOOKS

To some, the concept of having faith in a higher power or a set of religious beliefs is nonsensical. Indeed, many view religion in general, and Christianity in particular, as unfounded and unreasonable. Norman Geisler and Frank Turek argue, however, that Christianity is not only more reasonable than all other belief systems, but is indeed more rational than unbelief itself. With conviction and clear thinking, Geisler and Turek guide readers through some of the traditional, tested arguments for the existence of a creator God. They move into an examination of the source of morality and the reliability of the New Testament accounts concerning Jesus. The final section of the book deals with a detailed investigation of the claims of Christ. This volume will be an interesting read for those skeptical about Christianity, as well as a helpful resource for Christians seeking to articulate a more sophisticated defense of their faith.

Origins of Life in the Universe New Leaf Publishing Group

The most fascinating questions on the history of the Universe are answered in this text.

[Genesis and the Big Bang Theory](#) Rodopi

A ground-breaking book that takes on skeptics from both sides of the cosmological debate, arguing that science and the Bible are not at odds concerning the origin of the universe. The culmination of a physicist's thirty-five-year journey from MIT to Jerusalem, *Genesis and the Big Bang* presents a compelling argument that the events of the billions of years that cosmologists say followed the Big Bang and those of the first six days

described in Genesis are, in fact, one and the same—identical realities described in vastly different terms. In engaging, accessible language, Dr. Schroeder reconciles the observable facts of science with the very essence of Western religion: the biblical account of Creation. Carefully reviewing and interpreting accepted scientific principles, analogous passages of Scripture, and biblical scholarship, Dr. Schroeder arrives at a conclusion so lucid that one wonders why it has taken this long in coming. The result for the reader—whether believer or skeptic, Jewish or Christian—is a totally fresh understanding of the key events in the life of the universe.

[God and Creatures](#) Tyndale House Publishers, Inc.

Summarizes current theories about the creation of the universe, compares these with the Biblical story of creation, and looks at the role of scientists in increasing our understanding of the universe

[Evolution](#) United Church of God

Robert Jastrow discusses the past and future of space exploration, the cosmic mysteries that still await solution, and the possibility of extraterrestrials whose intelligence far outstrips our own.

[The Creator and the Cosmos](#) God and the Astronomers

Is Atheism Dead? is an entertaining, impressively wide-ranging, and decidedly provocative answer to that famous 1966 TIME cover that itself provocatively asked “Is God Dead?” In a voice that is by turns witty, muscular, and poetic, Metaxas intentionally echoes C.S. Lewis and G.K. Chesterton in cheerfully and logically making his astonishing case, along the way presenting breathtaking—and often withering—new evidence and arguments against the idea of a Creatorless universe. Taken all together, he shows atheism not merely to be implausible and intellectually sloppy, but now demonstrably ridiculous. Perhaps the only unanswered question on the subject is why we couldn’t see this sooner, and how embarrassed we should be about it.

[Pythagoras' Trousers](#) John Wiley & Sons

What does it mean to be an American Christian? In Letters to an American Christian, Bruce Riley Ashford, author of One Nation Under God, addresses overarching issues of the relationship of Christianity and politics, speaks to the way historic Christian belief informs specific hot-button political issues, and challenges readers to take seriously both our heavenly and earthly citizenships. Written as a series of letters to "Christian"—a young college student who is a new believer—Letters to an American Christian will help every reader think carefully about how Christianity informs what it means to be an American. In the midst of a rapidly changing national and political landscape, Letters to an American Christian reminds us of two important truths: we cannot afford to shrink away from our earthly citizenship, and we cannot afford to lose sight of our heavenly citizenship.

[Why Faith Makes Sense](#) Tyndale House Publishers, Inc.

This book critically explores answers to the big question, What produced our universe around fifteen billion years ago in a Big Bang? It critiques contemporary atheistic cosmologies, including Steady State, Oscillationism, Big Fizz, Big Divide, and Big Accident, that affirm the eternity and self-sufficiency of the universe without God. This study defends and revises Process Theology and arguments for God's existence from the universe's life-supporting order and contingent existence.

[The Quodlibetal Questions](#) Simon and Schuster

If you think atheists have reason, evidence, and science on their side, think again! Award-winning author Dr. Frank Turek (I Don't Have Enough Faith to be an Atheist) will show you how atheists steal reason, evidence, science, and other arguments from God in trying to make their case for atheism. If that sounds contradictory, it's because it is! Atheists can't make their case without appealing to realities only theism can explain. In an engaging and memorable way, Stealing from God exposes these intellectual crimes atheists are committing and then provides four powerful reasons for why Christianity is true.

[Journey to the Stars](#) Vintage

In this New York Times bestselling book, award-winning Chicago Tribune journalist Lee Strobel investigates and unpacks the scientific evidence that points toward God. "My road to atheism was paved by science . . . but, ironically, so was my later journey to God," Strobel says. During his academic

years, Lee Strobel became convinced that God was obsolete, a belief that colored his journalism career. Science had made the idea of a Creator irrelevant - or so Strobel thought. But today science points in a different direction. A diverse and impressive body of research has increasingly supported the conclusion that the universe was intelligently designed. At the same time, Darwinism has faltered in the face of concrete facts and hard reason. Has science discovered God? At the very least, it's giving faith an immense boost, as new findings emerge about the incredible complexity of our universe. Join Strobel as he reexamines the theories that once led him away from God. Through his compelling and highly readable account, you'll encounter the mind-stretching discoveries from cosmology, cellular biology, DNA research, astronomy, physics, and human consciousness that present astonishing evidence in The Case for a Creator. Also available: The Case for a Creator small group video study and study guide, Spanish edition, kids' edition, student edition, and more.

[A Physicist Explains How Science Shattered His Atheism and Revealed the Necessity of Faith](#) HarperCollins

Examines evidence which is threatening the basic assumptions of Darwinism.

[Faith Makes Sense](#) Courier Corporation

[God and the Astronomers](#) W. W. Norton & Company

[The Religion of Evolution](#) Crossway

Reveals the latest breakthroughs in astronomy, biology, and the brain sciences, relating these scientific discoveries to our new view of human beings—their place in the universe, origins, present nature, and destiny

[God and the Astronomers](#) W. W. Norton

Everyone wants to believe in something beyond or someone bigger than themselves, but nobody wants to be duped. In order to provide answers to people who are seeking the truth, Mark Mittelberg updates for today the classic book by Robert Laidlaw that sold millions, The Reason Why. This short book gives clear, concise reasons why belief in God makes sense.

[Why I Believe](#) Templeton Foundation Press

Earth. The Final Frontier Contrary to popular belief, Earth is not an insignificant blip on the universe’s radar. Our world proves anything but average in Guillermo Gonzalez and Jay W. Richards’ The Privileged Planet: How Our Place in the Cosmos Is Designed for Discovery. But what exactly does Earth bring to the table? How does it prove its worth among numerous planets and constellations in the vastness of the Milky Way? In The Privileged Planet, you’ll learn about the world’s life-sustaining capabilities, water and its miraculous makeup, protection by the planetary giants, and how our planet came into existence in the first place.

[The Heavens Declare Creation and Science Confirms It](#) Zondervan

We are told that science and religion are wholly incompatible and that those of us who profess faith in God are unwilling to bend our wills to the truth. In this highly gratifying book, scientist Dr. Gerard Verschuuren flips this assertion around, showing time and time again how it is not the Christians, but rather the scientists, who are unwilling to incline their wills to the truth when it presents itself. Dr. Verschuuren helps us to recognize science’s limited scope, how it is restricted to what can be dissected, measured, and counted. It is not the only pathway to knowledge. Science operates within the realm of nature. It cannot, therefore, make aesthetic judgments or moral judgments or draw conclusions about the supernatural, which is, by definition, beyond the realm of nature. Science is likewise ill-equipped to explore ethereal concepts such as beauty and love. It explores only the how, never the why. But science can, and does, point us in the direction of the Creator. With clear, well-documented explanations, Dr. Verschuuren carefully guides you through the fields of science, identifying the many “hints” and “signs” of God’s existence in genetics, neuroscience, behavioral science, semantics, logic, and math. Taken together, these hints provide an overwhelming case for the existence of God that is practically impossible to deny. How Science Points to God teaches you to approach scientific processes and discoveries with a mind of faith, bringing you to a far deeper understanding of who we are and how we came to be. In this way, science is moving us toward ultimately proving the existence of God, while inspiring and intensifying our faith along the way.

[Science Faces God in the Book of Genesis](#) Navpress Publishing Group

This book examines the two great mysteries which have defied science the riddle of life and the riddle of creation.
