Der "große Atkins" ist und bleibt ein Muss für jeden Studierenden, der mit physikalischer Chemie zu tun hat. Wie immer didaktisch brillant präsentieren Peter Atkins und Julio de Paula die gesamte Bandbreite dieses faszinierenden Fachs. Für die neue Auflage wurde der Inhalt noch einmal komplett überarbeitet und dabei stärker auf die Anwendungen der physikalischen Chemie und ihre Bedeutung für andere Fachgebiete ausgerichtet. Was ist neu? - Ein einführendes Kapitel zu den Grundlagen fasst wichtige chemische und physikalische Schlüsselprinzipien zusammen. - Ein abschließendes Kapitel über Katalyse trägt der gestiegenen Bedeutung dieses Themas für alle chemischen Prozesse Rechnung. - Aspekte der Modellierung und der Computerchemie sowie der Materialwissenschaft sind jetzt verstärkt in das Buch integriert. - Zusatzinformationen und mathematische Exkurse mit den Herleitungen wichtiger Gleichungen vertiefen das Gelernte. - Die Zusammenfassung der Lernziele am Anfang eines Kapitels (Das Wichtigste in Kürze) und der wichtigsten Gleichungen am Kapitelende (Die wichtigsten Gleichungen auf einen Blick) erleichtern das Wiederholen der Lerninhalte. - Der Tabellenanhang mit vielen nützlichen Stoffdaten wurde konsolidiert und ist nun wesentlich übersichtlicher. Was wurde beibehalten? - Alle Grafiken sind in Farbe und in einem einheitlichen Stil gestaltet. Rechenbeispiele mit kommentiertem Lösungsweg und dazugehörigen Übungsaufgaben zeigen wie es geht. - Diskussionsfragen, Leichte und Schwere Aufgaben zur jedem der Kapitel ermöglichen eine Verständniskontrolle und erleichtern das Einüben des Gelernten. Der neue Atkins/de Paula ist einfach unschlagbar, wenn es um das effektive Lernen und die Prüfungsvorbereitung in Physikalischer Chemie geht! Ideal für Chemie-Studierende vor und nach dem Vordiplom sowie in Bachelor- und Master-Studiengängen im Haupt- und Nebenfach.

*Electrical, Optical and Magnetic Properties of Organic Solid-State Materials IV: Volume 488* FrancoAngeli

This book shows that research involving electrical, optical and magnetic properties of organic solid-state materials continues to grow both in scope and technological importance. Early studies of charge transport in conducting polymers have evolved from the elucidation of fundamental structure/function relationships to applications such as batteries, simple electrical devices such as diodes, chemical sensors, antistatic coatings, microwave and millimeter wave-absorbing materials, and photochromic devices. A particularly exciting evolution has been the discovery and development of organic light-emitting diodes (OLEDs) which appear to be nearing commercialization in an amazingly short period of time. This application is of particular interest because both electrical and optical properties must be considered.. Topics include: organic light-emitting materials and devices; photonic materials and devices; conducting and electroactive polymers and materials; molecular and supramolecular engineering; organic metals and magnetic materials and poster presentations.

The idea of this NATO school was born during philosophical discussions with Dr Brevard on the present and future of NMR during a night walk under the palm trees in Biskra during a seminar held in this oasis. It was clear for us that the recent progress in the field of NMR, especially inverse spectroscopy and the development of MAS, was opening new perspectives for chemists. We realised also that organometallic and inorganic chemists were not clearly informed about the potentialities of all the new methods. NA TO, with its summer schools, was offering a good opportunity to propose to the chemical community a session where those problems would be largely developed. This School is then the prolongation of the two previous ones: Palermo in 1976 on "the less receptive nuclei" and Stirling in 1982 on "the multinuclear approach to NMR spectroscopy". It was divided into two sub-sessions: NMR in the liquid state and NMR in the solid state. This is reflected in the book organization. As indicated by the title of this School, we were mainly concerned with the methodological aspects of multinuclear NMR. If many examples are given, they appear only as a support for the understanding of the theory or in explanation of some practical aspects of the different experiments. Each domain is introduced by a lecture which presents selected examples.

Houben-Weyl is the acclaimed reference series for preparative methods in organic chemistry, in which all methods are organized according to the class of compound or functional group to be synthesized. The Houben-Weyl volumes contain 146 000 product-specific experimental procedures, 580 000 structures, and 700 000 references. The preparative significance of the methods for all classes of compounds is critically evaluated. The series includes data from as far back as the early 1800s to 2003. // The content of this e-book was originally published in 1983.

In the last decade, much progress has been made in these materials. This book presents a highly coherent coverage of supramolecular, photosensitive and electroactive materials, namely those that have been extensively investigated for applications in fields of electronic and photonic technologies. This extensive reference provides broad coverage of on different types of materials, their processing, spectroscopic characterization, physical properties and device applications. The implications reach from molecular recognition in synthetic and natural complexes to exciting new applications in chemical technologies, materials, nanostructures, functional materials, new generation catalysts, signal transducers, medical and biomedical applications and novel separation techniques. All these applications rely on supramolecular properties such as molecular recognition, molecular information, and tailored molecular assemblies. This book is aimed to present a highly coherent coverage of supramolecular, photosensitive and electroactive materials and their applications in electronic and photonic technologies. The research behind these materials constitute some of the most actively pursued fields of science.
