FinTech, an abbreviated term for financial technology, is a digital revolution changing the way banking and financial services are being used both by individuals and businesses. As these changes continue to take place, the financial industry is focused on technological innovation and feeding into this digital revolution to better serve consumers who are looking for easier ways to invest, transfer money, use banking services, and more. FinTech is increasing accessibility to financial services, automating these services, expanding financial options, and enabling online payments and banking. While the benefits are being continually seen and this technology is becoming more widely accepted, there are still challenges facing the technology that include security concerns. To understand FinTech and its role in society, both the benefits and challenges must be reviewed and discussed for a holistic view on the digital innovations changing the face of the financial industry. The Research Anthology on Concepts, Applications, and Challenges of FinTech covers the latest technologies in FinTech with a comprehensive view of the impact on the industry, where these technologies are implemented, how they are improving financial services, and the security applications and challenges being faced. The chapters cover the options FinTech has unlocked, such as mobile banking and virtual transactions, while also focusing on the workings of the technology itself and security applications, such as blockchain and cryptocurrency. This book is a valuable reference tool for accountants, bankers, financial planners, financial analysts,

business managers, economists, computer scientists, academicians, researchers, financial professionals, and students. CompTIA A+ Certification All-in-One For Dummies OECD Publishing

The lack of academic references on geothermal law is my primary motivation to write this book to provide insight for the academic world, lecturers, students, activists, government officials and the public interested in energy issues, particularly geothermal. This book will provide comprehensive references in geothermal law and policy, including a global perspective of energy, geothermal potential in Indonesia, borderless concept of geothermal management, challenges in geothermal utilisation in the country, and a comparative perspective of geothermal utilisation in New Zealand. It also highlighted reformulation geothermal legal formation.

Population Loss: The Role of Transportation and Other Issues OECD Publishing

Gut gesteuerte Zuwanderung wirkt sich positiv auf Deutschland aus: Sie verjüngt die Bevölkerung, federt regionale und berufsbezogene Fachkräfteengpässe ab und fördert den kulturellen Austausch. Aber gilt das auch in Zeiten hoher Flüchtlingszuwanderung? Wie ist es um die Offenheit der Gesellschaft bestellt und wie wirkt sich der wachsende Rechtspopulismus aus? Welche Rolle spielt die Fachkräftesicherung über Zuwanderer, wenn die einheimische

Bevölkerung besser in Arbeit gebracht werden soll? Ist Deutschland attraktiv genug für ausländische Fachkräfte oder brauchen wir gar ein neues Einwanderungsgesetz? Der Sammelband beleuchtet diese und viele weitere Fragen aus verschiedenen Perspektiven und stellt faire, zielorientierte Lösungen vor. Mit seinen Impulsen für Politik, Wirtschaft und Gesellschaft möchte der Band die Debatten zur Fachkräftezuwanderung und zu einem Einwanderungsgesetz bereichern.

Learn how exemplary countries are dealing with the challenges and joys of advancing the development of their youngest citizens. In this book, Sharon Lynn Kagan and her contributors systematically examine how six diverse countries go about envisioning, designing, and implementing their services to young children and their families. The Early Advantage 1 sheds light on new and exciting approaches to early childhood education and care (ECEC) that are contributing to the quality, equity, efficiency, and sustainability of services for young children. Brimming with fresh insights, the text provides concrete examples of successfully implemented strategies and methods that warrant attention from other countries wishing to improve their early childhood services. The 2-year comparative analysis upon which this volume is based was made possible with funding and support from the National Center on Education and the Economy's (NCEE) Center on International Education Benchmarking. "Kagan and her team describe a field at a very important inflection point, and they provide a framework for pushing on to the next stage." —From the Foreword by Marc Tucker, National Center on Education and the Economy "Pushes the early childhood field far beyond its traditional focus on services toward understanding systems, culture, governance, and sustainability." —Hirokazu Yoshikawa, New York University "A must-read for all those seeking to meet the joys and challenges of advancing the

development of their youngest citizens.” —Linda Darling-Hammond, Stanford University Contributors: Alfredo Bautista (Singapore), Rebecca Bull (Singapore), Lily Fritz (England), Bridget Healey (Australia), Sharon Lynn Kagan (U.S.), Kristiina Kumpulainen (Finland), Eva Landsberg (U.S.), Carrie Lau (Hong Kong), Mugyeong Moon (Republic of Korea), Grace Murkett (England), Tom Peachey (Australia), Nirmala Rao (Hong Kong), Kathy Sylva (England), Collette Tayler (Australia)

Sustainability and Sustainable Development UTB

This book describes how the creation of new digital services—through vertical and horizontal integration of data coming from sensors on top of existing legacy systems—that has already had a major impact on industry is now extending to healthcare. The book describes the fourth industrial revolution (i.e. Health 4.0), which is based on virtualization and service aggregation. It shows how sensors, embedded systems, and cyber-physical systems are fundamentally changing the way industrial processes work, their business models, and how we consume, while also affecting the health and care domains. Chapters describe the technology behind the shift of point of care to point of need and away from hospitals and institutions; how care will be delivered virtually outside hospitals; that services will be tailored to individuals rather than being designed as statistical averages; that data analytics will be used to help patients to manage their chronic conditions with help of smart devices; and that pharmaceuticals will be interactive to help prevent adverse reactions. The topics presented will have an impact on a variety of healthcare stakeholders in a continuously global and hyper-connected world. · Presents explanations of emerging topics as they relate to e-health, such as Industry 4.0, Precision Medicine, Mobile Health, 5G, Big Data, and Cyber-physical systems; · Provides overviews of technologies in addition to possible application scenarios and market conditions; · Features comprehensive demographic and statistic coverage of Health 4.0 presented in a graphical manner.

At heart, transportation policy and research are about people: connecting individuals and the places they live, ensuring sufficient and equitable access, and facilitating movement. Whether at the regional, city, or neighborhood scale, the loss of

population presents unique challenges where transport is concerned. It is not only about preservation of existing access, but possibly even a question of increased need for connectivity and mobility. Demographic changes that accompany depopulation—aging for example—also impact existing systems, preferences, and needs. High quality and focused contributions on a complex and urgent topic A clear focus on qualitative analyses and mixed method approaches

Mobile devices have become an essential item in the daily lives of many people. As with any innovation, mobile services present both opportunities and challenges to current business models. The development of mobile communication coupled with evolving mobile services have completely changed the business landscape and have transformed consumer behavior. It is important to understand the impact that these services have on users' lives, business, and society. Impact of Mobile Services on Business Development and E-Commerce is a collection of innovative research that focuses on the importance of mobile services in business development and discusses the provision of decentralized services, mobile commerce and marketing, and new models for the delivery of mobile services such as business-to-consumer and peer-to-peer. While highlighting topics including global market, consumer behavior, and customer satisfaction, this book is ideally designed for business managers, executives, marketers, entrepreneurs, financial advisors, consumer behavior analysts, computer engineers, software developers, IT specialists, students, researchers, and business professionals.

The Office of the Under Secretary of Defense (Personnel & Readiness), referred to throughout this report as P&R, is responsible for the total force management of all Department of Defense (DoD) components including the recruitment, readiness,

and retention of personnel. Its work and policies are supported by a number of organizations both within DoD, including the Defense Manpower Data Center (DMDC), and externally, including the federally funded research and development centers (FFRDCs) that work for DoD. P&R must be able to answer questions for the Secretary of Defense such as how to recruit people with an aptitude for and interest in various specialties and along particular career tracks and how to assess on an ongoing basis service members' career satisfaction and their ability to meet new challenges. P&R must also address larger-scale questions, such as how the current realignment of forces to the Asia-Pacific area and other regions will affect recruitment, readiness, and retention. While DoD makes use of large-scale data and mathematical analysis in intelligence, surveillance, reconnaissance, and elsewhere—exploiting techniques such as complex network analysis, machine learning, streaming social media analysis, and anomaly detection—these skills and capabilities have not been applied as well to the personnel and readiness enterprise. Strengthening Data Science Methods for Department of Defense Personnel and Readiness Missions offers and roadmap and implementation plan for the integration of data analysis in support of decisions within the purview of P&R.

Handbook Of Energy Finance: Theories, Practices And Simulations Hal Leonard Corporation

This book will provide readers with an in-depth theoretical awareness and practical guidance on the implementation of an effective monitoring and evaluation (M&E) system to ensure construction projects meet approved quality, cost, time and social sustainability objectives. The authors discuss the drivers, challenges, determinants and benefits of effective M&E implementation together with the theories and models underpinning construction project M&E practices. Further, a comparative overview of M&E practices in developed and developing countries is presented to elucidate the best practices. The book first conceptualizes M&E as a five-factor model

comprising stakeholder involvement, budgetary allocation and logistics, technical capacity and training, leadership, and communication. It then presents an M&E case study on the Ghanaian construction industry before expanding on the idea of M&E systems as an effective tool for project performance and in optimizing a project's contribution to society and the environment. The book further provides guidance on M&E practice for construction project managers, investors, professionals, researchers and other stakeholders and is therefore of interest to those in architecture, construction engineering, planning, project management and development studies.

This book assesses stability guarantees through the lens of the legitimate expectations principle to offer a new perspective on the stability concept in international energy investments. The analysis of the interaction between the concepts of stability and legitimate expectations reveals that there are now more opportunities for energy investors to argue their cases before arbitral tribunals. The book offers detailed analyses of the latest energy investment arbitral awards from Spain, Italy and the Czech Republic, and reflects on the state of the art of the legitimate expectations debate and its relationship with the stability concept. The author argues that, in order to achieve stability, the legitimate expectations principle should be employed as the main investment protection tool when a dispute arises on account of unilateral host state alterations. This timely work will be useful to both scholars and practitioners who are interested in international energy law, investment treaty arbitration, and international investment law.
