After explaining the importance of diversity

audits, this book offers a range of options for how to go about conducting them. Library collections serve as a reflection of their communities and the wider world, and audits are the best way to assess the inclusivity of these collections. In this practical book, Sarah Voels helps libraries meet the challenge of doing a diversity audit. The task of auditing a collection for its diversity is essential to the development of a reflective collection. Conducting a diversity audit gives library professionals a realistic and accurate assessment of the strengths and weaknesses of the materials they provide their readers. Only with this information at hand can libraries work toward improvement. But what's the best way to conduct an audit? What criteria should be used? How can audits be tailored to specific communities? How much will it cost, and how much time will it take? Voels has taken away the guesswork by surveying a wide range of libraries that have performed diversity audits and sharing their successes and challenges. She suggests best practices while acknowledging that each

library's specific situation will be unique. All libraries considering a diversity audit will benefit from this guide.

Few resources exist to help students and mental health clinicians with the daunting task of learning how to synthesize test data from numerous instruments into a meaningful treatment plan and strategy for a client. This book was written to address that need. It provides readers with clear and detailed step-by-step procedures for using the WAIS-III, MMPI 2, MMPI A, Kuder Occupational Interest Survey, and the Strong Interest Inventory. It features case examples

and practice opportunities in test usage, detailed discussion of approaches to client feedback and report writing, and a review of ethical and legal considerations in using tests in clinical settings. It takes readers through a systematic explanation of how to understand and integrate data from multiple sources to maximize the information gleaned from the tests. It also emphasizes using test data to maximize helpfulness to the client and how to interpret test data to clients in language that is understandable.
