In *Africa's Odious Debts*, Boyce and Ndikumana reveal the shocking fact that, contrary to the popular perception of Africa being a drain on the financial resources of the West, the continent is actually a net creditor to the rest of the world. The extent of capital flight from sub-Saharan Africa is remarkable: more than \$700 billion in the past four decades. But Africa's foreign assets remain private and hidden, while its foreign debts are public, owed by the people of Africa through their governments. Léonce Ndikumana and James K. Boyce reveal the intimate links between foreign loans and capital flight. Of the money borrowed by African governments in recent decades, more than half departed in the same year, with a significant portion of it winding up in private accounts at the very banks that provided the loans in the first place. Meanwhile, debt-service payments continue to drain scarce resources from Africa, cutting into funds available for public health and other needs. Controversially, the authors argue that African governments should repudiate these 'odious debts' from which their people derived no benefit, and that the international community should assist in this effort. A vital book for anyone interested in Africa, its future and its relationship with the West.

Highlighting the most important events, ideas, and individuals that shaped modern Europe, *A Concise History of Modern Europe* provides a readable, succinct history of the continent from the Enlightenment and the French Revolution to the present day. Avoiding a detailed, lengthy chronology, the book focuses on key events and ideas to explore the causes and consequences of revolutions—be they political, economic, or scientific; the origins and development of human rights and democracy; and issues of European identity. Any reader needing a broad overview of the sweep of European history since 1789 will find this book, published in a first edition under the title *Revolutionary Europe*, an engaging and cohesive narrative.

Gabriel provides the first attempt at a continuous historical narrative of the military history of ancient Israel.

The Hard Crowd BRILL

There are still wild places out there on our crowded planet. Through a series of personal journeys, Dan Richards explores the appeal of far-flung outposts in mountains, tundra, forests, oceans and deserts. Following a route from the Cairngorms of Scotland to the fire-watch lookouts of Washington State; from Iceland's 'Houses of Joy' to the Utah desert; frozen ghost towns in Svalbard to shrines in Japan; Roald Dahl's writing hut to a lighthouse in the North Atlantic, Richards explores landscapes which have inspired writers, artists and musicians, and asks: why are we drawn to wilderness? What can we do to protect them? And what does the future hold for outposts on the edge?

This volume examines the practice of memory in early modern Europe, showing that this was already a multimedia affair with many political uses, and affecting people at all levels of society; many pre-modern memory practices persist until today.

The twelve essays in this book demonstrate the importance of bringing history back into historical materialism. They combine the discussion of Marx's categories with historical work on a wide range of themes and periods (the early middle ages, 'Asiatic' regimes, agrarian capitalism, etc.).

French thinkers have revolutionized European thought about knowledge, religion, politics, and society. Delivering a comprehensive history of thought in France from the Middle Ages to the present, this book follows themes and developments of thought across the centuries. It provides readers with studies of both systematic thinkers and those who operate less systematically, through essays or fragments, and places them all in their many contexts. Informed by up-to-date research, these accessible chapters are written by prominent experts in their fields who investigate key concepts in non-technical language. Chapters feature treatments of specific thinkers as individuals including Voltaire, Rousseau, Descartes and Derrida, but also more general movements and schools of thought from humanism to liberalism, via the Enlightenment, Romanticism, Marxism, and feminism. Furthermore, the influence of gender, race, empire and slavery are investigated to offer a broad and fulfilling account of French thought throughout the ages.

'Hilarious' Sam Leith 'I loved this book' Susie Dent 'Witty and affectionate' Lynne Truss Perfect for book lovers, a delightful history of the wonders to be found in the humble book index Most of us give little thought to the back of the book - it's just where you go to look things up. But here, hiding in plain sight, is an unlikely realm of ambition and obsession, sparring and politicking, pleasure and play. Here we might find Butchers, to be avoided, or Cows that sh-te Fire, or even catch Calvin in his chamber with a Nonne. This is the secret world of the index: an unsung but extraordinary everyday tool, with an illustrious but little-known past. Here, for the first time, its story is told. Charting its curious path from the monasteries and universities of thirteenth-century Europe to Silicon Valley in the twenty-first, Dennis Duncan reveals how the index has saved heretics from the stake, kept politicians from high office and made us all into the readers we are today. We follow it through German print shops and Enlightenment coffee houses, novelists' living rooms and university laboratories, encountering emperors and popes, philosophers and prime ministers, poets, librarians and - of course - indexers along the way. Revealing its vast role in our evolving literary and intellectual culture, Duncan shows that, for all our anxieties about the Age of Search, we are all index-rakers at heart, and we have been for eight hundred years. *A Financial Times and History Today Book of the Year*

A History of the Rectangular Survey System Simon and Schuster

A definitive account of the three-month air battle in 1940 between the Royal Air Force and the Luftwaffe. The victory of the Battle of Britain ranks with Marathon and the Marne as a decisive point in history. At the end of June 1940, having overrun much of Western Europe, the Nazi war leaders knew that they had to defeat the Royal Air Force Fighter Command before they could invade the British mainland. With a finely-struck balance of historical background and dramatic renderings of RAF and Luftwaffe engagements over the English countryside, Hough and Richards offer a history that is at once deep and wide-ranging. They offer insight into how the British laid the groundwork for victory through aircraft research and production, the development and implementation of command

and control structures, and research into new technologies, the most important of which was radar. Hough and Richards also utilize first-person accounts of the battle whenever possible, rendering the battle scenes with cinematic intensity. A compelling introduction to one of the most important battles of World War II, The Battle of Britain pays tribute to the men about whom Winston Churchill would remark, "Never in the field of human conflict was so much owed by so many to so few."

A Concise History of Modern Europe Harper Collins

A "meticulously researched" (The New York Times Book Review) examination of energy transitions over time and an exploration of the current challenges presented by global warming, a surging world population, and renewable energy—from Pulitzer Prize- and National Book Award-winning author Richard Rhodes. People have lived and died, businesses have prospered and failed, and nations have risen to world power and declined, all over energy challenges. Through an unforgettable cast of characters, Pulitzer Prize-winning author Richard Rhodes explains how wood gave way to coal and coal made room for oil, as we now turn to natural gas, nuclear power, and renewable energy.

"Entertaining and informative...a powerful look at the importance of science" (NPR.org), Rhodes looks back on five centuries of progress, through such influential figures as Queen Elizabeth I, King James I, Benjamin Franklin, Herman Melville, John D. Rockefeller, and Henry Ford. In his "magisterial history...a tour de force of popular science" (Kirkus Reviews, starred review), Rhodes shows how breakthroughs in energy production occurred; from animal and waterpower to the steam engine, from internal-combustion to the electric motor. He looks at the current energy landscape, with a focus on how wind energy is competing for dominance with cast supplies of coal and natural gas. He also addresses the specter of global warming, and a population hurtling towards ten billion by 2100. Human beings have confronted the problem of how to draw energy from raw material since the beginning of time. Each invention, each discovery, each adaptation brought further challenges, and through such transformations, we arrived at where we are today. "A beautifully written, often inspiring saga of ingenuity and progress...Energy brings facts, context, and clarity to a key, often contentious subject" (Booklist, starred review).

A Human History Penguin Books, Limited (UK)

From the monarchical terror of the Middle Ages to the mangled Europe of the twenty-first century, *A People's History of Modern Europe* tells the history of the continent through the deeds of those whom mainstream history tries to forget. Europe provided the perfect conditions for a great number of political revolutions from below. The German peasant wars of Thomas Müntzer, the bourgeois revolutions of the eighteenth century, the rise of the industrial worker in England, the turbulent journey of the Russian Soviets, the role of the European working class throughout the Cold War, student protests in 1968 and through to the present day, when we continue to fight to forge an alternative to the barbaric economic system. By focusing on the role of women, trade unions and students, this history sweeps away the tired platitudes of the privileged upon which our current understanding is based, providing an opportunity to see our history differently.

An Illustrated History of Modern Europe, 1789-1945, Etc. (Fifth Edition.), W. W. Norton

This is the true story behind Wall Street legend Richard Dennis, his disciples, the Turtles, and the trading techniques that made them millionaires. What happens when ordinary people are taught a system to make extraordinary money? Richard Dennis made a fortune on Wall Street by investing

according to a few simple rules. Convinced that great trading was a skill that could be taught to anyone, he made a bet with his partner and ran a classified ad in the Wall Street Journal looking for novices to train. His recruits, later known as the Turtles, had anything but traditional Wall Street backgrounds; they included a professional blackjack player, a pianist, and a fantasy game designer. For two weeks, Dennis taught them his investment rules and philosophy, and set them loose to start trading, each with a million dollars of his money. By the time the experiment ended, Dennis had made a hundred million dollars from his Turtles and created one killer Wall Street legend. In *The Complete Turtle Trader*, Michael W. Covel, bestselling author of *Trend Following* and managing editor of TurtleTrader.com, the leading website on the Turtles, tells their riveting story with the first ever on the record interviews with individual Turtles. He describes how Dennis interviewed and selected his students, details their education and experiences while working for him, and breaks down the Turtle system and rules in full. He reveals how they made astounding fortunes, and follows their lives from the original experiment to the present day. Some have grown even wealthier than ever, and include some of today's top hedge fund managers. Equally important are those who passed along their approach to a second generation of Turtles, proving that the Turtles' system truly is reproducible, and that anyone with the discipline and the desire to succeed can do as well as—or even better than—Wall Street's top hedge fund wizards. In an era full of slapdash investing advice and promises of hot stock tips for "the next big thing," as popularized by pundits like Jim Cramer of *Mad Money*, the easy-to-follow objective rules of the TurtleTrader stand out as a sound guide for truly making the most out of your money. These rules worked—and still work today—for the Turtles, and any other investor with the desire and commitment to learn from one of the greatest investing stories of all time.

Economic history states that money replaced a bartering system, yet there isn't any evidence to support this axiom. Anthropologist Graeber presents a stunning reversal of this conventional wisdom. For more than 5000 years, humans have used elaborate credit systems to buy and sell goods. Since the beginning of the agrarian empires, humans have been divided into debtors and creditors. Through time, virtual credit money was replaced by gold and the system as a whole went into decline. This fascinating history is told for the first time.

The work of the RAF bomber command has come under fire from a whole generation of historians since the 1960s. They claim that the RAF offensive against Germany was immoral because so many civilians were killed, and wasteful because so many attacks were not on specific military targets. In this book, Denis Richards, co-author of the official history of the RAF 1939-1945, describes the difficulties and failures, but redresses the balance by making clear the magnitude of Bomber Command's achievements. His account provides a revised interpretation of the battle fought virtually every night for almost five and a half years, in which over half the aircrew became casualties. Truly, it was the hardest victory.
