The resurgence of the electric car in modern life is a tale of adventurers, men and women who bucked the complete dominance of the fossil fueled car to seek something cleaner, simpler and cheaper. Award-winning former Wall Street Journal reporter John Fialka documents the early days of the electric car, from the M.I.T./Caltech race between prototypes in the summer of 1968 to the 1987 victory of the Sunraycer in the world's first race featuring solar powered cars. Thirty years later, the electric has captured the imagination and pocketbooks of American consumers. Organizations like the U.S. Department of Energy and the state of California, along with companies from the old-guard of General Motors and Toyota as well as upstart young players like Tesla Motors and Elon Musk have embraced the once-extinct technology. The electric car has steadily gained traction in the U.S. and around the world. We are watching the start of a trillion dollar, worldwide race to see who will dominate one of the biggest commercial upheavals of the 21st century. Drawing from the last decade of his 26-year career at the Wall Street Journal, where he covered energy and environmental matters, ClimateWire founder and industry insider John Fialka brings to life this thrilling and important story about American's rejection and second obsession with the electric car.

of Medium- and Heavy-Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium- and heavy-duty vehicles, such as tractor-trailers, transit buses, and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles, which account for about 26 percent of the transportation fuel used in the U.S. The miles-per-gallon measure used to regulate the fuel economy of passenger cars. is not appropriate for medium- and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.
