ASTM D3359 Standard Test Method for Measuring Adhesion by ... Astm D3359 Standard Test MethodsThere are two distinct test methods in ASTM D3359: method A and B. Typically method A is used for field testing and method B is used in laboratory. ASTM D3359 is widely used in the coating industry as it allows to semi-quantify the adhesion of the coating undergoing testing to the specific substrate it is applied to.ASTM D3359 Test Methods For Measuring Adhesion By Tape - MicomA similar test method, ISO 2409, permits tests on non-metallic substrates (for example, wood and plaster). Precision and bias data on the latter is lacking. Test Method D3359 was developed with metal as the substrate and, in the absence of supporting precision and bias data, is so limited.ASTM D3359 - 17 Standard Test Methods for Rating Adhesion ...ASTM D3359-17 Standard Test Methods for Rating Adhesion by Tape Test 1.1 These test methods cover procedures for assessing the adhesion of relatively ductile coating films to metallic substrates by applying and removing pressure-sensitive tape over cuts made in the film.ASTM D3359-17 - Standard Test Methods for Rating Adhesion ...ASTM D3359-17 - Standard Test Methods for Rating Adhesion by Tape Test. This test, at the simplest level, involves the examination of the paint film removed after an applied tape is peeled off. Through the patterns and methods of ASTM D3359-17 's procedures, adhesion can be much more easily and reliably measured.ASTM D3359-17 - Standard Test Methods for Rating Adhesion ...Also, Test Method B is not considered suitable for films thicker than 125µm (5 mils) unless wider spaced cuts are employed and there is an explicit agreement between the purchaser and seller. These test methods are used to evaluate whether the adhesion of a coating to a substrate is adequate for the user's application.ASTM D3359 - Standard Test Methods for Rating Adhesion by ...A similar test method, ISO 2409, permits tests on soft substrates (for example, wood and plaster). Precision and bias data on the latter is lacking. Test Methods D3359 was developed with metal as the substrate and, in the absence of supporting precision and bias data, is so limited.ASTM D3359 Standard Test Methods for Measuring Adhesion by ...A similar test method, ISO 2409, permits tests on soft substrates (for example, wood and plaster). Precision and bias data on the later is lacking. Test Methods D3359 was developed with metal as the substrate and, in the absence of supporting precision and bias data, is so limited.ASTM D3359 - 09e2 Standard Test Methods for Measuring ...D3359 - 02 Standard Test Methods for Measuring Adhesion by Tape Test , adhesion, tape, crosscut adhesion test method, tape adhesion test method, X-cut adhesion test method, Products and Services / Standards & Publications / Standards ProductsASTM D3359 - 02 Standard Test Methods for Measuring ...D3359 - 09 Standard Test Methods for Measuring Adhesion by Tape Test , adhesion, crosscut adhesion test method, tape, tape adhesion test method, X-cut adhesion test method, Adhesion--paints/related coatings/materials, Substrates--coating applications, Cross-cut tape adhesion test, Coating adhesion, Cut tape test, Knife test, Metallic coatings, Pressure-sensitive tapes, Razor blade, Scalpel, Service life processing/analysis, Tape adhesion test, X-cut adhesion test,ASTM D3359 - 09 Standard Test Methods for Measuring ...Precision and bias data on the later is lacking. Test Methods D3359 was developed with metal as the substrate and, in the absence of supporting precision and bias data, is so limited. 1.2 Test Method A is primarily intended for use at job sites while Test Method B is more suitable for use in the laboratory.Standard Test Methods for Measuring Adhesion by Tape Test1ASTM D3359 - Standard Test Methods for Rating Adhesion by Tape Test. Scope: 1.1 These test methods cover procedures for assessing the adhesion of relatively ductile coating films to metallic substrates by applying and removing pressure-sensitive tape over cuts made in the film. 1.2 Test Method A is primarily intended for use in the field while Test Method B is more suitable for use in laboratory or shop environments.ASTM D3359 Métodos de prueba | TQC SheenI believe you are referring to Method B within ASTM D3359 [link by ed. to spec at TechStreet]. If so, the spacing between the cuts varies with the dry film thickness of the coating. For coatings with dry film thickness of up to and including 2 mils, the spacing is 1 mm apart, with eleven cuts total (unless there is another agreement).ASTM D3359 Standard Test Method for Measuring Adhesion by ...A similar test method, ISO 2409, permits tests on non-metallic substrates (for example, wood and plaster). Precision and bias data on the latter is lacking. Test

Method D3359 was developed with metal as the substrate and, in the absence of supporting precision and bias data, is so limited.ASTM-D3359 | Standard Test Methods for Rating Adhesion by ...These test methods cover procedures for assessing the adhesion of relatively ductile coating films to metallic substrates by applying and removing pressure-sensitive tape over cuts made in the film. Test Method A is primarily intended for use in the field while Test Method B is more suitable for use in laboratory or shop environments.ASTM D3359 : Standard Test Methods for Rating Adhesion by ...The cross hatch tape test method, also known as ASTM D3359, is a simple qualitative means of classifying a coating's adhesion. In essence, a multi-toothed blade is used to score parallel lines through a coating to the substrate.Gardco :: Adhesion Test AnalyzerASTM Book of Standards.
