Sensation and perception are two separate processes that are very closely related. Sensation is input about the physical world obtained by our sensory receptors, and perception is the process by which the brain selects, organizes, and interprets these sensations. In other words, senses are the

physiological basis of perception. Sensation and Perception | Introduction to Psychology According to College Board, "Psychologists study sensation and perception to explain how and why externally gathered sensations and perceptions impact behaviors and mental processes" Using input from several anatomical structures, the sensations we perceive process and interpret information about the environment around us and our place within it. Auditory Sensation and Perception | Unit 3: Sensation and ... Before you finish, you'll investigate why psychologists study sensation to better understand perception, which is a key

component of our behaviour and mental processes. This course is part of our Study with Australia collection, with free upgrades and digital certificates supported by the Australian Trade and Investment Commission until 31st July, 2020. Psychology Sensation and Perception Online Course ...1) Sensation occurs: a) sensory organs absorb energy from a physical stimulus in the environment. b) sensory receptors convert this energy into neural impulses and send them to the brain. 2) Perception follows: a) the brain organizes the information and translates it into something meaningful.
