Since the first trade deal with the US in 1987, Canada has insisted on a "cultural exemption" to ensure that governments were free to protect Canadian culture and to restrict foreign ownership and limit foreign content in the media. Negotiators and government ministers considered the cultural exemption key to reassuring Canadians that the deal did not undermine our cultural sovereignty. In every trade deal since, culture has been a contentious issue. Media giants and foreign governments have pushed for unlimited access to Canada. Ottawa has worked with cultural industries to maintain the cultural exemption. Garry Neil has been close to every one of these negotiations, and has been a key advisor to cultural groups on trade deals. He has been part of the international initiative to assert the importance of cultural diversity in the world, and to create effective measures to guarantee it. This book reflects his experience trying to ensure that the reality matches the rhetoric when it comes to culture. As he sees it, in spite of the claims, Canadian cultural policies and programs have been steadily restricted by successive trade deals. He explains how this has happened, and what needs to be done for Canada to maintain our cultural sovereignty and creative life in the face of multinational corporations and their government supporters who are promoting a world monoculture.

An essential guide to the intractable public debates about the virtues and vices of economic globalization, cutting through the complexity to reveal the fault lines that divide us and the points of agreement that might bring us together. Globalization has lifted millions out of poverty.

Globalization is a weapon the rich use to exploit the poor. Globalization builds bridges across national boundaries.

Globalization fuels the populism and great-power competition that is tearing the world apart. When it comes to the politics of free trade and open borders, the camps are dug in, producing a kaleidoscope of claims and counterclaims, unlikely alliances, and unexpected foes. But what exactly are we fighting about? And how might we approach these issues more productively? Anthea Roberts and Nicolas Lamp cut through the confusion with an indispensable survey of the interests, logics, and ideologies driving these intractable debates, which lie at the heart of so much political dispute and decision making. The authors expertly guide us through six competing narratives about the virtues and vices of globalization: the old establishment view that globalization benefits everyone (win-win), the pessimistic belief that it threatens us all with pandemics and climate change (lose-lose), along with various rival accounts that focus on specific winners and losers, from China to America's rust belt. Instead of picking sides, *Six Faces of Globalization* gives all these positions their due, showing how each deploys sophisticated arguments and compelling evidence. Both globalization's boosters and detractors will come away with their eyes opened. By isolating the fundamental value conflicts—growth versus sustainability, efficiency versus social stability—driving disagreement and show where rival narratives converge, Roberts and Lamp provide a holistic framework for understanding current debates. In doing so, they showcase a more integrative way of thinking about complex problems.

We often picture life on the Canadian home front as a time of austerity, as a time when women went to work and men went to war. Graham Broad explodes this myth of home front sacrifice by bringing to light the contradictions of consumer society in wartime. Governments pressured Depression-weary citizens to save for the sake of the nation, but Canadians had money in their pockets, and advertisers tempted them with fresh groceries, glamorous movies, and new cars and appliances. Broad reveals that our "greatest generation" was not impervious to temptation but rather embarked on one of the biggest spending booms in our nation's history.

"Clear writing and illustrations... Clear explanations of difficult concepts... Clear communication of the ways in biochemistry is currently understood and practiced. For over 35 years, in edition after bestselling edition, Principles of Biochemistry has put those defining principles into practice, guiding students through a coherent introduction to the essentials of biochemistry without overwhelming them. The new edition brings this remarkable text into a new era. Like its predecessors, Lehninger Principles of Biochemistry, Sixth Edition strikes a careful balance of current science and enduring concepts, incorporating a tremendous amount of new findings, but only those that help illustrate biochemistry's foundational principles. With this edition, students will encounter new information emerging from high throughput DNA sequencing, x-ray

crystallography, and the manipulation of genes and gene expression, and other techniques. In addition, students will see how contemporary biochemistry has shifted away from exploring metabolic pathways in isolation to focusing on interactions among pathways. They will also get an updated understanding of the relevance of biochemistry to the study of human disease (especially diabetes) as well as the important role of evolutionary theory in biochemical research. These extensive content changes, as well as new art and powerful new learning technologies make this edition of Lehninger Principles of Biochemistry the most impressive yet." --Publisher description.

Lehninger Principles of Biochemistry

The Sixth Extinction is a haunting account of the age in which we live. Ecologists are calling it the Sixth Great Extinction, and the world isn't losing just its ecological legacy; also vanishing is a vast human legacy of languages and our ways of living, seeing, and knowing. Terry Glavin confirms that we are in the midst of a nearly unprecedented, catastrophic vanishing of animals, plants, and human cultures. He argues that the language of environmentalism is inadequate in describing the unraveling of the vast system in which all these extinctions are actually related. And he writes that we're no longer gaining knowledge with every generation. We're losing it. In the face of what he describes as a dark and gathering sameness upon the Earth, Glavin embarks on a global journey to meet the very things we're losing (a distinct species every ten minutes, a unique vegetable variety every six hours, an entire language every two weeks) and on the way encounters some of the world's wonderful, rare things: a human-sized salmon in Russia; a mysterious Sino-Tibetan song-language; a Malayan tiger, the last of its kind; and a strange tomato that tastes just like black cherry ice cream. And he finds hope in the most unlikely places---a macaw roost in Costa Rica; a small village in Ireland; a relic community of Norse whalers in the North Atlantic; the vault beneath the Royal Botanical Garden at Kew; and the throne room of the Angh of Longwa in the eastern Himalayas. A fresh narrative take on the usual doom and gloom environmentalism, The Sixth Extinction draws upon zoology, biology, ecology, anthropology, and mythology to share the joys hidden within the long human struggle to conserve the world's living things. Here, we find hope in what's left: the absolute and stunning beauty in the Earth's last cultures and creatures.
