Laboratory Manual for Anatomy and Physiology Featuring Martini Art, Pig Version Wiley

There has been a marked change in examination strategy over the last five years; EMQs (extended matching questions) are popular with tutors and students alike as they present a more realistic view of a student's ability to apply his or her knowledge in a clinical situation. The new edition of MCQs in Physiology has been subject to a complete overhaul to become MCQs and EMQs in Physiology. This reflects the current methods of examination techniques and will provide the student with a complete revision resource book. Packed with MCQs and EMQs along with clear and simple explanations of each answer, this book covers all the main physiological systems. The questions stretch from basic to applied and interpretative and are written with the modern integrated syllabus firmly in mind. Presented alongside other core revision books such as EMQs in Clinical Medicine this book will soon be seen as a must-have for any medic's shelf.

This full-color atlas is designed for all students taking separate or integrated courses in human anatomy and physiology. This atlas can accompany and augment any human anatomy, human physiology or combined human anatomy and physiology textbook. It is designed to be of particular value to students in a laboratory situation and could either accompany a laboratory manual or, in certain courses, it could serve as the laboratory manual. Great care has gone into the preparation of

this photographic atlas to provide students with a complete set of photographs for each of the human body systems. Cat, fetal pig, and rat dissection are also included for those students who have the opportunity to do similar dissections as part of their laboratory requirement. In addition, photographs of a sheep heart dissection are also included. A visual balance is achieved between the various levels available to observe the structure of the body. Completely labeled, informative figures are depicted clearly and accurately. The terms used in this atlas are those that are approved and recommended by the Basle Nomina Anatomica (BNA). Some of the changes for this new edition include a new art program, new vertebrate dissection images (new specimens were dissected to obtain better quality photographs of the muscular and organ systems), and a new full page heart valve/cardiac cycle figure.
