Economic growth is a key issue both in economic policy making and in economic research. In eastern nations of the world, the interest in economic growth has been in the centrestage in view of the persistently high rates of unemployment and resurgence of recessionary pressures on these economies due to spillover effects from other developed economies undergoing recessionary phases. Entrepreneurial activities not only open up new doorways of income generation for individuals residing in the economy but is also looked upon now as panacea to treat unemployment by most governments, provided such ventures turn out to be revenue generating for the entrepreneur after all the risk he is willing to undertake. Entrepreneurship contributes to the development of innovative technologies, processes as well as business systems which in turn influences the prevailing market structures in the economy disrupting the competition existing in the markets. Nonetheless it bound to impact the capital formation in the economy and thus the growth of the economy. The inter relations between credit extension by commercial banks, entrepreneurship and economic growth are investigated in this paper empirically using autoregressive models.

This book shows how the use of biodegradable plastics in agriculture can have a profound positive impact on plasticulture. Starting with an organic chemistry approach to biodegradable and compostable plastics, both natural and synthetic, it then analyzes the technological and agronomic aspects of existing bioplastics for protected cultivation (mulching, direct cover, low tunnels). It describes the new sprayable biodegradable mulching method, which is based on the use of waterborne polysaccharides and cellulosic fibers. A further chapter describes the research and technology of biodegradable plastics for different agricultural practices. It also includes chapters on life cycle assessment (LCA) of biodegradable plastics for agriculture, and existing and developing standards in the field. It is a valuable resource for agronomists, chemical and materials engineers, polymer technologists and scientists, as well as for a more general readership interested in the application of green chemistry principles to the vast world of crop production.
