Question 1: Which of the following primes satisfy the congruence $x^2 \equiv 1 \pmod{p}$. Answer: If p is a prime such that $p \equiv 1 \pmod{4}$, then 2 is a quadratic residue mod p . By Fermat's little theorem, we have $x^{p-1} \equiv 1 \pmod{p}$. Hence, the given equation becomes $x^2 - 1 \equiv 0 \pmod{p}$. Then, for all $x \in \mathbb{Z}$, $x^2 \equiv 1 \pmod{p}$ if and only if $x \equiv \pm 1 \pmod{p}$. Here and satisfies this equation.

 Answers to sample abstract reasoning questions. It is not always easy to assess whether someone has the intellectual ability to see

patterns and draw conclusions from unfamiliar information. Abstract reasoning questions require you to demonstrate your ability to understand complex concepts and assimilate new information. Sample Abstract Reasoning Questions In algebra, which is a broad division of mathematics, abstract algebra (occasionally called modern algebra) is the study of algebraic structures. Algebraic structures include groups, rings, fields, modules, vector spaces, lattices,

and algebras. The term abstract algebra was coined in the early 20th century to distinguish this area of study from the other parts of algebra.
