The corrected standard deviation of differences,  $s_c$ , is  $\sqrt{s_D^2 + \frac{1}{4} s_1^2 + \frac{1}{4} s_2^2}$ . This is approximately  $\sqrt{2 s_D^2}$ , but if there are differences between the two methods not explicable by repeatability errors alone (i.e. interaction between subject and measurement method) this approximation may produce an overestimate.
