*Vegetable Seed*

*Production* John Wiley &  
Sons

This volume builds a  
conceptual basis for  
assessment promoting  
learning in Content and

Language Integrated  
Learning (CLIL)

classrooms and proposes  
practical assessment  
approaches and activities  
that CLIL teachers can  
apply in the classroom.  
CLIL as an educational  
context is unique, as  
language and content  
learning happen

simultaneously. The  
efficacy of such  
instruction has been  
studied extensively, but  
assessment in CLIL  
classrooms has drawn  
much less attention. The  
present volume aims to  
fill this gap. Arranged  
based on different ways  
that content and language

are integrated in CLIL, the chapters in this book together build a solid theoretical basis for assessment promoting learning in CLIL classrooms. The authors discuss how assessment eliciting this integration yields insights into learners' abilities, but more importantly, how these insights are used to promote learning. The contributors to the volume together build the understanding of classroom-based assessment as cyclic, of teaching, learning, and

assessment as inter-related, and of content and language in CLIL classrooms as a dialectical unity. This volume will spark interest in and discussion of classroom-based assessment in CLIL among CLIL educators and researchers, enable reflection of classroom assessment practices, and foster collaboration between CLIL teachers and researchers. The assessment approaches and activities discussed in the volume, in turn, will help educators

understand the scope of applications of assessment and inspire them to adapt these to their own classrooms.

 Your path to studying in Germany Are you from outside of the EU and are taking the TestAS to increase your chances of admission to a German university? With our books you can prepare for the TestAS cost-effectively and efficiently. The following preparation books for the TestAS Core Test 2020 are available in

English and German: ► 1. Preparation Book for the TestAS Core Test: Guideline for the TestAS and Completing Patterns ► 2. Preparation Book for the TestAS Core Test: Solving Quantitative Problems ► 3. Preparation Book for the TestAS Core Test: Inferring Relationships and Continuing Numerical Series Together, the three preparation books cover the entire spectrum of the TestAS Core Test with its four subtests. Included in the 2. Preparation Book for the TestAS Core Test:

Solving Quantitative Problems are: ✓ Explanation of the subtest "Solving Quantitative Problems" ✓ Repetition of the most important basics for this subtest ✓ Practice questions on the various topics with detailed solutions ✓ Extensive collection of exercises with four complete test sets Additionally, the preparation books for the following subject-specific modules are available on Amazon in English and German: ► Mathematics, Computer Science and Natural Science ►

Economics ► Engineering ► Humanities, Cultural Studies and Social Sciences Take the admission test with confidence! We wish you success in your preparations and with the exam! Your edulink team *A Context-Driven Approach* Springer From Robin Sickles: As I indicated to you some months ago Professor William Horrace and I would like Springer to publish a Festschrift in Honor of Peter Schmidt, our professor. Peter's accomplishments are ►

legendary among his students and the profession. I have a bit of that student perspective in my introductory and closing remarks on the website for the conference we had in his honor this last July. I have attached the conference program from which selected papers will come (as well as from students who were unable to attend). You will also find the names of his students (40) on the website. A top twenty economics department could be started up from those 40

students. Papers from some festschrifts have a thematic link among the papers based on subject material. What I think is unique to this festschrift is that the theme running through the papers will be Peter's remarkable legacy left to his students to frame a problem and then analyze and examine it in depth using rigorous techniques but rarely just for the purpose of showcasing technical refinements per se. I think this would be a book that graduate students would find invaluable in their

early research careers and seasoned scholars would find invaluable in both their and their students' research.

**Econometric Methods and Applications** John Wiley & Sons

This open access book, published to mark the 15th anniversary of the International Software Quality Institute (iSQI), is intended to raise the profile of software testers and their profession. It gathers contributions by respected software testing experts in order to highlight the state of the

art as well as future challenges and trends. In addition, it covers current and emerging technologies like test automation, DevOps, and artificial intelligence methodologies used for software testing, before taking a look into the future. The contributing authors answer questions like: "How is the profession of tester currently changing? What should testers be prepared for in the years to come, and what skills will the next generation need? What opportunities

are available for further training today? What will testing look like in an agile world that is user-centered and fast-paced? What tasks will remain for testers once the most important processes are automated?" iSQI has been focused on the education and certification of software testers for fifteen years now, and in the process has contributed to improving the quality of software in many areas. The papers gathered here clearly reflect the numerous ways in which

software quality assurance can play a critical role in various areas. Accordingly, the book will be of interest to both professional software testers and managers working in software testing or software quality assurance.

*Investigation and Critique*  
Springer

"The commodification of Islamic antiques intensified in the late Ottoman Empire, an age of domestic reform and increased European interference following the Tanzimat (reorganisation)

of 1839. Mercedes Volait examines the social life of typical objects moving from Cairo and Damascus to Paris, London, and beyond, uncovers the range of agencies and subjectivities involved in the trade of architectural salvage and historic handicraft, and traces impacts on private interiors, through creative reuse and Revival design, in Egypt, Europe and America. By devoting attention to both local and global engagements with Middle Eastern tangible heritage, the present

volume invites to look anew at Orientalism in art and interior design, the canon of Islamic architecture and the translocation of historic works of art"--  
*Design Thinking in Higher Education* Leiden Studies in Islam and So  
 The international marine shipping industry is responsible for the transport of around 90% of the total world trade. Low-speed two-stroke diesel engines usually propel the largest trading ships. This engine type choice is mainly

motivated by its high fuel efficiency and the capacity to burn cheap low-quality fuels. To reduce the marine freight impact on the environment, the International Maritime Organization (IMO) has introduced stricter limits on the engine pollutant emissions. One of these new restrictions, named Tier III, sets the maximum NOx emissions permitted. New emission reduction technologies have to be developed to fulfill the Tier III limits on two-stroke engines since adjusting

the engine combustion alone is not sufficient. There are several promising technologies to achieve the required NO<sub>x</sub> reductions, Exhaust Gas Recirculation (EGR) is one of them. For automotive applications, EGR is a mature technology, and many of the research findings can be used directly in marine applications. However, there are some differences in marine two-stroke engines, which require further development to apply and control EGR. The number

of available engines for testing EGR controllers on ships and test beds is low due to the recent introduction of EGR. Hence, engine simulation models are a good alternative for developing controllers, and many different engine loading scenarios can be simulated without the high costs of running real engine tests. The primary focus of this thesis is the development and validation of models for two-stroke marine engines with EGR. The modeling follows a Mean

Value Engine Model (MVEM) approach, which has a low computational complexity and permits faster than real-time simulations suitable for controller testing. A parameterization process that deals with the low measurement data availability, compared to the available data on automotive engines, is also investigated and described. As a result, the proposed model is parameterized to two different two-stroke engines showing a good agreement with the

measurements in both stationary and dynamic conditions. Several engine components have been developed. One of these is a new analytic in-cylinder pressure model that captures the influence of the injection and exhaust valve timings without increasing the simulation time. A new compressor model that can extrapolate to low speeds and pressure ratios in a physically sound way is also described. This compressor model is a requirement to be able to

simulate low engine loads. Moreover, a novel parameterization algorithm is shown to handle well the model nonlinearities and to obtain a good model agreement with a large number of tested compressor maps. Furthermore, the engine model is complemented with dynamic models for ship and propeller to be able to simulate transient sailing scenarios, where good EGR controller performance is crucial. The model is used to identify the low load area

as the most challenging for the controller performance, due to the slower engine air path dynamics. Further low load simulations indicate that sensor bias can be problematic and lead to an undesired black smoke formation, while errors in the parameters of the controller flow estimators are not as critical. This result is valuable because for a newly built engine a proper sensor setup is more straightforward to verify than to get the right parameters for the flow estimators.

*The Post-Conflict Environment* BEIJING BOOK CO. INC.  
 This book covers elementary discrete mathematics for computer science and engineering. It emphasizes mathematical definitions and proofs as well as applicable methods. Topics include formal logic notation, proof methods; induction, well-ordering; sets, relations; elementary graph theory; integer congruences; asymptotic notation and growth of functions; permutations

and combinations, counting principles; discrete probability. Further selected topics may also be covered, such as recursive definition and structural induction; state machines and invariants; recurrences; generating functions.

This book addresses the contributions of design thinking to higher education and explores the benefits and challenges of design thinking discourses and practices in interdisciplinary contexts. With a particular focus on Australia, the USA and UK, the book examines the value and drawbacks of employing design thinking in different disciplines and contexts, and also considers its future.

**Advances in Plant Biopesticides** UCL Press

This book presents the theory behind the development of the 2009 PISA survey.

**Phenolic Compound Biochemistry** Springer

The coronavirus disease (COVID-19) pandemic disrupted both supply and demand sides of an interconnected world

economy in 2020. Asia and the Pacific was not immune as lockdowns and travel and trade restrictions affected nearly all aspects of cross-border economic activity. This publication examines the initial impact on trade, investment, finance, and people's mobility across the region as the pandemic struck. It looks at how regional economies individually or collectively respond to the crisis by, for example, leveraging rapid technological progress

and digitalization as well as increasing services trade to reconnect and recover. The theme chapter focuses on digital platforms and how they can accelerate digital transformation across the region.

The Proceedings of the 8th International Symposium on the Molecular Breeding of Forage and Turf Springer Nature

This book reveals how to provide the leaders of tomorrow with the right education for a management career Made

in Germany. It explains how private universities in Germany are helping to maintain the country's respected educational standards, while also enriching them with exemplary services for international students.

The book is intended as a practical guide, addressing any concerns students may have when considering studying at a private German university: admissions, visa, teaching quality and formats, tuition, degrees, subjects, housing, food, security, industry

connections, and international job placement and leadership. It provides concrete strategies on how students can unlock their personal earning potential and how to find a top job at a national or multinational company. The authors demonstrate that a German university degree will generate rapid return on investment. Real-life success stories show how a degree from a private German university can pave the way for international professional success.

Work for Asia and the  
Pacific CABI

This essential handbook for student and practicing plant pathologists has been thoroughly reorganized and updated since the publication of the second edition in 1983. The new edition includes: rearrangement of topics to facilitate use; 49 short succinct chapters, each providing valuable practical information; new topics such as landmarks in plant pathology, survey of sampling procedures,

disease evaluation, effects of climate change, biochemical and molecular techniques, epidemic modelling, breeding for resistance, laboratory safety and electronic databases; seven overall sections covering disease recognition and evaluation, causation, diagnosis, investigation, control, general techniques, and presentation of results. Relationships of Natural Enemies and Non-prey Foods Springer  
The 'Advances in Plant

Biopesticides' comprises 19 chapters on different important issues of developing biopesticides from promising botanicals and its phytomolecules based on the research reviews in the area concern. The book is written by reputed scientists and professors of both developed and developing countries namely Australia, Canada, Czech Republic, Egypt, Greece, India, Kenya, Thailand, Turkey, United Kingdom, and USA represented by almost 53 contributors. The book is

organized and presented in such a form that the readers can acquire and enhance their knowledge in plant biopesticide bioresources, its application in different areas to manage pests and diseases of field crops, stored products with status of exploring in Africa, non-target effects on beneficial arthropods, control of arthropods of veterinary and vectors of communicable diseases, efficacy in controlling honeybee mite pests, prospect of applying new tools to enhance the

efficacy of plant biopesticides through use of nanotechnology, most important plant derived active principle as source of biopesticides, possible mode of action of phytochemicals against arthropods, limitation, production status, consumption, formulation, registration and quality regulation of plant biopesticides and have been cited by important scientific references. Most importantly, the book also highlights a unique example for developing biopesticides based on

the research on Annonaceae as potential source of plant biopesticide, exploiting phytochemicals for developing green technology for sustainable crop protection strategies to withstand climate change with example in Africa, and overview in developing insect resistance to plant biopesticides. Most of the chapter contributing authors are internationally reputed researchers and possess experiences of more than three to four decades in the area of

plant biopesticides. The contributing and corresponding authors of the book - *Advances in Plant Biopesticides* proposed and identified by the editor (Dwijendra Singh) include distinguished professors and reputed scientists from different continents of the world namely MB Isman (Canada), Nadia Z Dimetry (Egypt), Zeaur R Khan (Kenya), John A Pickett (UK), Gadi VP Reddy (USA), S Gopalakrishnan (India), Anand Prakash (India), Chirantan Chattopadyay

(India), Christos G Athanassiou (Greece), Philip C. Stevenson (UK), S Raguraman (India), S Ghosh (India), Mir S Mulla (USA), Apiwat Tawatsin (Thailand), Dwijendra Singh (India), K Sahayaraj (India), Suresh Walia (India), T Shivanandappa (India), Roman Pavela (Czech Republic), Errol Hasan (Australia), Ayhan Gokce (Turkey), SK Raza (India), and their colleague co-contributors. This book would certainly provide the updated knowledge to global readers on plant

biopesticides as one of the important reference source and would stimulate to present and future researchers, scientists, student, teachers, entrepreneurs, and government & non-government policy makers interested to develop new & novel environmentally safe plant biopesticides world over.

### **A Century of Plant Virology in India**

Psychology Press

Teachers spend much of their time on assessment, yet many higher education teachers have received minimal guidance on assessment design and marking. This means assessment can often be a source of stress and frustration.

Assessment and Feedback in Higher Education aims to solve these problems. Offering a concise overview of assessment

theory and practice, this guide provides teachers with the help they need.

### **An Applied Approach from Design to Concept Demonstration**

Springer Science & Business Media  
 The book is a compilation of research work carried out on plant viruses during past 100 years in India. Plant viruses are important constraints in Indian agriculture.

Tropical and sub-tropical environments and intensive crop cultivation practices ideally favours perpetuation of numerous plant viruses and their

vectors in India, which often cause wide spread crop losses. Of all the plant pathogens, studies of plant viruses have received a special attention as they are difficult to manage. A large body of literature has been published on the plant virus research from India during past 100 years; however the information is so far not available in one place. This book provides comprehensive information on the biology, molecular biology, epidemics, crop

losses, diagnosis and management of viruses and viroids occurring in India. Description of properties of the viruses are provided in the chapters comprising of different genera such as Allexivirus, Begomovirus, Babuvirus, Badnavirus, Carlavirus, Carmovirus, Cucumovirus, Closterovirus, Ilavirus, Mandrivirus, Potyvirus, Tospovirus, Tungrovirus and Sobemovirus. Virus-vector research related to aphid, thrips and whitefly is discussed. The work on the management aspects

of plant viral diseases has been described with reference to the conventional, antiviral and transgenic approaches. Further, the quarantine mechanism developed in India for the exclusion of viruses and vectors has also been included. The book also provides useful information about the capacity building on the research and education on Plant Virology in India. Overall, the book covers a wide range of accounts of research findings and innovations in Plant Virology in India during

past 100 years. The book will be a resourceful reference to the students, scientists, agricultural professionals and policy makers.

Statistical Procedures for Agricultural Research

Solution Tree Press

These are just a few examples that illustrate the chemical diversity and use of phenolic compounds, the topic of 'Phenolic Compound Biochemistry'. This book is written for researchers, instructors, advanced undergraduate students and beginning graduate

students in the life sciences who wish to become more familiar with these and many other intriguing aspects of phenolic compounds. Topics covered include nomenclature, chemical properties, biosynthesis, including an up-to-date overview of the genetics controlling phenolic metabolism, isolation and characterization of phenolic compounds, phenolics used in plant defense, and the impact of phenolics on human health. The book is written in an accessible

style, and assumes only basic knowledge of organic chemistry, biochemistry and cell physiology. More than 300 chemical structures and reaction schemes illustrate the text. Wilfred Vermerris is Associate Professor of Agronomy at the University of Florida Genetics Institute in Gainesville, FL. His research focuses on the genetic control of phenolic compounds that impact agro-industrial processing of crop plants. Ralph Nicholson is Professor of Botany and Plant

Pathology at Purdue University in West Lafayette, IN. He is an expert on phenolic compounds involved in the plant's defense against pathogenic fungi and bacteria.

Interdisciplinary Encounters OECD Publishing  
 Self-regulated learning (SRL) subsumes key aspects of the learning process, such as cognitive

strategies, metacognition and motivation, in one coherent construct. Central to this construct are the autonomy and responsibility of students to take charge of their own learning. Skills for self-regulation can be encouraged both directly and indirectly through a range of learning activities. In this book we look specifically at the ways in which technology enhanced learning environments (TELEs) have been used to support self-regulation. The book provides an

overview of recent studies on SRL in TELEs in Europe – a perspective which is new and has not been articulated hitherto. It addresses conceptual and methodological questions as well as practices in technology enhanced learning. While the focus is on European studies, we are aware that much of the groundwork in the field of SRL has emanated from the United States. The book is divided into three parts: (A) Foundations of SRL in TELEs, (B) Empirical studies on SRL in TELEs

and (C) SRL in TELEs: presents a rich resource who are interested in perspectives on future of information for supporting the acquisition developments. The book researchers and of SRL through TELEs. educators at all levels
