PWM full-bridge boost converter can be implemented with either zero-voltage switching (ZVS) or zero-current switching (ZCS) depending on the application. ZVS is implemented in applications where the input voltage is high, the input current is low or medium and switch turn-on switching losses are dominant. A New ZVS-PWM Full-Bridge Boost Converter Abstract: This paper presents a zero-voltage-switching (ZVS) full-bridge dc-dc converter combining resonant and pulse-width-modulation (PWM) power conversions for electric vehicle battery chargers. In the proposed converter, a half-bridge LLC resonant circuit shares the lagging leg with a phase-shift full-bridge (PSFB) dc-dc circuit to guarantee ZVS of the lagging-leg switches from zero to full load.
