Persuasion Skills Black Book W. W. Norton & Company

"See that moon up there? You can reach that high. Never be afraid because you can be anything you want to be." Susan Lucci was only five years old when her father shared these encouraging words with her. They inspired the highly imaginative child who loved make-believe to craft one of the most enduring characters in television history, an achievement that would earn her a record twenty-one Emmy nominations—the most for an actor in the award's history—and the crown as "Leading Lady of Daytime." When Lucci and All My Children were introduced to the world in 1971, American television changed forever. Susan's character, the beautiful, spirited, and mercurial Erica Kane, was an original—the first vixen viewers loved to hate. But while millions have enjoyed getting to know Erica's many sides—and have been awed at how this character has continually remade herself—the woman who plays her has remained a mystery. In her long-awaited memoir, this very private actress, wife, mother, daughter, grandmother, sister, friend, and entrepreneur pulls back the curtain to reveal her story. Susan, like Erica Kane, has undergone a metamorphosis many times. All My Life shares the stories of those transformations: starring in roles on television and stage, where she took Broadway not just by storm but "by tsunami" as one critic raved about her performance in Annie Get Your Gun; mounting successful cabaret acts (solo and with Regis Philbin); bringing art and joy back to New York in the wake of 9/11; conquering the tango with Tony Dovolani on ABC's hit show Dancing with the Stars; and building a successful career as an entrepreneur with a signature line of products. Susan goes beyond her success to talk about the darker moments, too, including the childhood guilt she harbored over the death of her dear grandmother, the car accident that nearly took away her career and her eyesight, her newborn son's life-threatening illness, coping with her husband's cancer, and the pain of miscarriage—one of the many parallels between her Erica Kane. As charming, down-to-earth, and compelling as the woman whose story it tells, All My Life shines a spotlight on one of our most popular stars and reminds us of the power of dreams and how we can find the courage and tenacity to make them come true.

It is a compilation of chapters that discuss the most vital concepts in this field. While understanding the long-term perspectives of the topics, the book makes an effort in highlighting their impact as a modern tool for the growth of the discipline. It will serve as a valuable source of reference for those interested in this field.

All My Life John Wiley & Sons

In this intellectual history-making volume, multiple award-winning W. E. B. Du Bois scholar Reiland Rabaka offers the first book-length treatment of Du Bois's seminal sociological discourse: from Du Bois as inventor of the sociology of race to Du Bois as the first sociologist of American religion; from Du Bois as a pioneer of urban and rural sociology to Du Bois as innovator of the sociology of gender and inaugurator of intersectional sociology; and, finally, from Du Bois as groundbreaking sociologist of education and critical criminologist to Du Bois as dialectical critic of the disciplinary decadence of sociology and the American academy. Against Epistemic Apartheid brings new and intensive archival research into critical dialogue with the watershed work of classical and contemporary, male and female, black and white, national and international sociologists and critical social theorists' Du Bois studies. Against Epistemic Apartheid offers an accessible introduction to Du Bois's major contributions to sociology and, therefore, will be of interest to scholars and students not only in sociology, but also African American studies, American studies, cultural studies, critical race studies, gender studies, and postcolonial studies, as well as scholars and students in 'traditional' disciplines such as history, philosophy, political science, economics, education, and religion.

The author of When Things Fall Apart reveals the meaning behind 59 Buddhist teachings and how you can use them as touchstones for daily living For centuries Tibetan Buddhists have relied on a collection of 59 pithy teachings—called lojong in Tibetan—to help them develop wisdom and compassion amid the challenges of daily living. In this book, Pema Chödrön introduces these transformative teachings and offers guidance on how to make them part of our everyday lives. Each lojong, or slogan, is followed by Pema Chödrön's accessible and succinct commentary on how to understand and apply it. The lojong teachings include: · "Always maintain only a joyful mind." · "Don't be swayed by external circumstances." · "Don't be so predictable." · "Be grateful to everyone." Inside Always Maintain a Joyful Mind readers will also find a link to an online audio program entitled "Opening the Heart." Here, Pema Chödrön offers in-depth instruction on tonglen meditation—a powerful practice that anyone can undertake to awaken compassion for oneself and others.

Basic Quantum Mechanics (PB with CD) Macmillan

This monograph presents a short course in computational geometry and topology. In the first part the book covers Voronoi diagrams and Delaunay triangulations, then it presents the theory of alpha complexes which play a crucial role in biology. The central part of the book is the homology theory and their computation, including the theory of persistence which is indispensable for applications, e.g. shape reconstruction. The target audience comprises researchers and practitioners in mathematics, biology, neuroscience and computer science, but the book may also be beneficial to graduate students of these fields.

Aldous Huxley John Wiley & Sons

Sybil Bedford, an intimate friend of the Huxleys through four decades, re-creates not only the private Huxley and the literary Huxley but the entire intellectual and social era to which he was central. Drawing on his letters and diaries, the memories of his intimates, and her own sharp and sensitive comprehension of Huxley's writings, Mrs. Bedford has written a masterful biography. Huxley becomes a living, deeply attractive presence, while his great contemporaries flash through these pages in memorable and moving encounters.

Quantum Mechanics Chanda Hahn

An understanding of quantum mechanics is vital to all students of physics, chemistry and electrical engineering, but requires a lot of mathematical concepts, the details of which are given with great clarity in this book. Various concepts have been derived from first principles, so it can also be used for self-study. The chapters on the JWKB approximation, time-independent perturbation theory and effects of magnetic field stand out for their clarity and easy-to-understand mathematics. Two complete chapters on the linear harmonic oscillator provide a very detailed discussion of one of the most fundamental problems in quantum mechanics. Operator algebra is used to show the ease with which one can calculate the harmonic oscillator wave functions and study the evolution of the coherent state. Similarly, three chapters on angular momentum give a detailed account of this important problem. Perhaps the most attractive feature of the book is the excellent balance between theory and applications and the large number of applications in such diverse areas as astrophysics, nuclear physics, atomic and molecular spectroscopy, solid-state physics, and quantum well structures.

With the advent of lasers, numerous applications of it such as optical information processing, holography, and optical communication have evolved. These applications have made the study of optics essential for scientists and engineers. The present volume, intended for senior under graduate and first-year graduate students, introduces basic concepts necessary for an understanding of many of these applications. The book has grown out of lectures given at the Master's level to students of applied optics at the Indian Institute of Technology, New Delhi. Chapters 1-3 deal with geometrical optics, where we develop the theory behind the tracing of rays and calculation of aberrations. The formulas for aberrations are derived from first principles. We use the method involving Luneburg's treatment starting from Hamilton's equations since we believe that this method is easy to understand. Chapters 4-8 discuss the more important aspects of contemporary physical optics, namely, diffraction, coherence, Fourier optics, and holography. The basis for discussion is the scalar wave equation. A number of applications of spatial frequency filtering and holography are also discussed. With the availability of high-power laser beams, a large number of nonlinear optical phenomena have been studied. Of the various nonlinear phenomena, the self-focusing (or defocusing) of light beams due to the nonlinear dependence of the dielectric constant on intensity has received considerable attention. In Chapter 9 we discuss in detail the steady-state self-focusing of light beams.
