Butterworth-Heinemann

The Guide to the Project Management Body of Knowledge published by the Project Management Institute provides a

roadmap of 47 processes designed to support project managers in all phases of project management. The sheer number of processes and their allocation across process groups and knowledge areas may leave project managers in a quandary about where to start and how to apply the many components of project management processes. What is lacking is a simple explanatory guide for the layman that clarifies the "big picture" of the Project Management Body of Knowledge (PMBOK). This explains where a project manager should begin when managing projects, and how the project manager can easily make use of the PMBOK framework to progress from an initial idea to a project schedule.

A Managerial Approach McGraw-Hill Education

A Guide to the Project Management Body of Knowledge (PMBOK® Guide) provides generalized project management guidance applicable to most projects most of the time. In order to apply this generalized guidance to construction projects, the Project Management Institute has developed the Construction Extension to the PMBOK® Guide. This Construction Extension provides construction-specific guidance for the project management practitioner for each of the PMBOK® Guide Knowledge Areas, as well as guidance in these additional areas not found in the

PMBOK® Guide: •All project resources, rather than just human resources •Project health, safety, security, and environmental management •Project financial management, in addition to cost •Management of claims in construction This edition of the Construction Extension also follows a new structure, discussing the principles in each of the Knowledge Areas rather than discussing the individual processes. This approach broadens the applicability of the Construction Extension by increasing the focus on the “what” and “why” of construction project management. This Construction Extension also includes discussion of emerging trends and developments in the construction industry that affect the application of project management to construction projects.
