BS EN 868-5:2018 EN 868-5 – Annexe D. This test involves cutting a 15mm wide strip on the package and using a motorized tensile testing machine to separate the two sealed materials. The strip must be cut perpendicular to the seal. A sample of each packaging seal must be collected and tested at its center (see diagram below):

Peel tests on terminally sterilized medical packaging ...The tensile test is carried out according to EN 868-5 and ASTM F88/F88M. During the tensile test, one or more strips of defined width (e.g. 15 mm) are cut out of the packaging at right angles to the sealing seam. A calibrated tensile testing machine is used to measure the force required to open the sealing.
