This title is now out of print. A new version with e-book is available under ISBN 9780702044809. This highly acclaimed step-by-step guide provides the relevant physiology, available evidence and

rationale for each clinical skill. In a highly readable format, 'Skills for Midwifery Practice' offers self-assessment and short summaries, as well as detailed instruction on achieving a range of clinical skills. Tells you everything you need to know about:

- Abdominal examination
- Assessment of maternal and neonatal vital signs
- Infection control
- Hygiene needs
- Elimination management
- Drug administration
- Intrapartum and other related childbearing skills
- Assessment of the baby
- Infant nutrition
- Phlebotomy and intravenous therapy
- Moving and handling
- Perioperative skills
- Wound management
- Restricted mobility management
- Cardiopulmonary resuscitation for the woman and baby

An essential midwifery textbook that covers the fundamental practical tasks required of the student. Clear layout ensures easy access to information. Highly illustrated to aid understanding. Designed to improve competency when delivering basic skills. Expanded chapter on the skills used during the first stage of labour. Application of national guideline for the management of care. Postnatal examination. Discussion of the use of infrared touch/non-touch thermometry techniques. Specific

information on locating pulse sites. More on SATS monitoring. Increased information on the skills for the second stage of labour, infant feeding and daily examination of the baby. Greater reference to infection control protocols and the reduction of hospital-acquired infections.

A Textbook for Students Saunders

Neonatal Care provides student midwives, student nurses, nursery nurses and senior health care assistants with a practical and theoretical guide to all aspects of basic neonatal care. All chapters are mapped where appropriate to the NHS Knowledge and Skills Framework (2004) and the NMC Standards of proficiency for pre-registration midwifery education (2004). The role of the health care assistant is increasing significantly, particularly in the postnatal care of mother and baby, and there is a requirement for them to develop knowledge and skills to support their developing role. This book will enable HCAs to gain an understanding of basic neonatal care, including the identification of issues that may need to be referred to someone with more advanced skills. The chapters provide a gradual progression through the types of neonatal services

available, the care the neonate may require and why, and the midwife or nurse's role in facilitating neonatal care within the family. There is also consideration of cultural and diversity issues, communication, and legal and professional matters pertinent to caring for the neonate. All chapters have specific learning outcomes and self assessment exercises to enable readers to assess and track their own progress.

(a Textbook for Pupil Midwives) Routledge

"Given the increasing complexities of co-morbidities in women of childbearing age, this book provides a case study approach to several critical conditions which challenge all health care professionals working in this field. The case study approach will help midwives, doctors, midwifery and medical students to ground their clinical skills training on each specific situation by working through the questions and answer format. Of particular importance is the emphasis on inter-professional team working and the links between theory and practice." Dr. Rita Borg Xuereb, Head of Department of Midwifery, Faculty of Health Sciences, University of Malta, Malta "The authors are

to be commended as this is the first book of its kind and is well overdue ... The content is excellent, well referenced and covers all of the important issues ... The layout makes the book easy to read and the inclusion of pre-reading, self-assessment of knowledge and case studies engages the reader and stimulates further study into the pathophysiology and management of obstetric emergencies. I particularly liked the chapter on sepsis." Professor Christine Kettle, University Hospital of North Staffordshire & Staffordshire University, UK Part of a case book series, this book contains 14 common pregnancy and childbirth emergency scenarios to help prepare student midwives for life in practice. Each case explores and explains the pathology, pharmacology and care principles, and uses test questions and answers to help assess learning. The practical cases link theory to practice and their grounding in reality will really help bring midwifery to life. The book also: Covers the principles, pathology and skills involved in a range of birthing scenarios Acts as a useful aide memoire when simulating managing care procedures Demonstrates the importance

of inter-professional team working in problem-solving Uses tables, diagrams and textboxes throughout, which act as a useful reference point Midwifery Practice is essential reading for student midwives, medical students and paramedics and a valuable resource for health professionals pursuing postgraduate studies in high dependency/ critical care. It is also beneficial to the facilitation of maternity based OSCEs. Contributors: Sam Bharmal, Susan Brydon, Margaret Ramsay, Jane Rutherford, Andrew Sim **Concepts and Challenges** McGraw-Hill Education (UK) Perfect for fans of "One Born Every Minute", "Call the Midwife", "Hard Pushed" and anyone who has ever dreamed of becoming a midwife. Violet dreams of becoming a midwife. Off to university to start her training, all that stand between her and her future are anxiety, self-doubt and three years of hard work. With best friend Zoe by her side, can she overcome the obstacles to make her dreams come true? This volume contains the entire Lessons of a Student Midwife series, including Life Lessons, Love Lessons and Lessons Learned. Praise for Life Lessons "A

fictional but very real insight into the life of a student midwife. Nearly had me in tears of joy." "This book is rather adorable. The two main characters, Violet and Zoe, are everything best friends should be." "I absolutely ADORED this book."

Myles' Textbook for Midwives Elsevier Health Sciences The Student's Guide to BECOMING A NURSE The Student's Guide to Becoming a Nurse is an essential guide for all student nurses who want to become competent practitioners. It explores the knowledge, skills and attitudes that all pre-registration nursing students must acquire by the end of their programme of study, enabling them to become confident, successful nurses. Thoroughly re-written and updated to include the latest 2010 NMC standards for pre-registration nursing education, this invaluable textbook is divided into four key sections: Professional values Communication and interpersonal skills Nursing practice and decision making Leadership, management and team working With case studies, top tips, activities and questions throughout, The Student's Guide to Becoming a Nurse is ideal for all pre-registration nurses and

those about to qualify. Student Reviews "It's been designed for students and that's why I like it... it is student friendly, useful, easy to read." Tamara Thomas, 2nd year nursing student, Swansea University "I cannot fault the content - it is straight to the point, it provides some interesting resources for a student nurse that is essential for them to know... a joy to read." Faye Elliott, 2nd year nursing student, Keele University "I think the content and material is excellent... I will definitely be making recommendations to my friends." Leanne Curran, 2nd year nursing student, University of Ulster "This book is truly amazing and provided all of the information needed for my final exam to become a qualified nurse. I passed with flying colours, thanks." Amazon review *Myles Textbook for Midwives* John Wiley & Sons

Being a midwife requires not only good clinical skills, but also an understanding of the social and emotional changes a woman goes through before and after birth. This book enables midwives to practise with an effective range of skills. *Science and Sensitivity in Practice* Elsevier Health Sciences

This essential handbook helps midwifery students to make the most from their time studying. It clearly explains the core learning skills you will need right from the start of the course, such as academic writing, placement learning and understanding theoretical concepts. It also introduces more advanced skills, such as reflection, research, evidence-based practice, writing a dissertation and complex decision making. It shows why these important skills are essential for you both to succeed at university and when you are a registered midwife. Key features - An accessible student-friendly guide specifically written for midwifery students - Three midwifery students are followed throughout the book to show real issues that you may face during your studies - Activities throughout help you test and develop your own learning skills - Each chapter is linked to relevant NMC and QAA standards, so that you can see what you are expected to know in order to pass your programme. Series Editor The Transforming Midwifery Practice series editor is Judith Jackson, Canterbury College.

Between the late 18th and the early 20th century, the industrialized world experienced a transition in birth practices. While in many countries this led to a separation of midwifery from modern medicine, in Germany new standards of health care were embraced. Fallwell's study explores this transition and sets it in its wider historical context.
