Publicly available statistics from government agencies that are credible, relevant, accurate, and timely are essential for policy makers, individuals, households, businesses, academic institutions, and other organizations to make informed decisions. Even more, the effective operation of a democratic system of government depends on the unhindered flow of statistical information to its citizens. In the United States, federal statistical agencies in cabinet departments and independent agencies are the governmental units whose principal function is to compile, analyze, and disseminate information for such statistical purposes as describing population characteristics and trends, planning and monitoring programs, and conducting research and evaluation. The work of these agencies is coordinated by the U.S. Office of Management and Budget. Statistical agencies may acquire information not only from surveys or censuses of people and organizations, but also from such sources as government administrative records, private-sector datasets, and Internet sources that are judged of suitable quality and relevance for statistical use. They may conduct analyses, but they do not advocate policies or take partisan positions. Statistical purposes

for which they provide information relate to descriptions of groups and exclude any interest in or identification of an individual person, institution, or economic unit. Four principles are fundamental for a federal statistical agency: relevance to policy issues, credibility among data users, trust among data providers, and independence from political and other undue external influence. Principles and Practices for a Federal Statistical Agency: Sixth Edition presents and comments on these principles as they've been impacted by changes in laws, regulations, and other aspects of the environment of federal statistical agencies over the past 4 years.

Introductory Readings, Fourteenth Edition SAGE Publications India

Sociology, Work and Organisation builds on the five popular and successful editions of *Sociology, Work and Industry*. The new text is outstanding in how effectively it explains the value of using the sociological imagination to understand the nature of institutions of work, organisations, occupations, management and employment and how they are changing in the 21st century. The book combines intellectual depth with accessible language and a user-friendly layout. It is unrivalled in the breadth of its coverage and its authoritative overview of both traditional and emergent themes in the sociological study of work and organisation. It explains the basic logic of the sociological analysis of work and the way work is organised, whilst also providing an appreciation of the different theoretical traditions which the subject draws upon. It fully considers: the direction and implication of trends in technological change, globalisation, labour markets, work organisation, managerial practices and employment relations the extent to which these trends are intimately related to changing patterns of inequality in modern societies and to the changing experiences of individuals and families the ways in which workers challenge, resist and make their own contributions to the patterning of work and shaping of work institutions. Key features include: a new sign-posting system which integrates material and brings out themes which run through the various chapters; 'key issue' guides and summaries with each chapter; and the identifying of key concepts throughout the book, which are then brought together in an unrivalled glossary and concept guide at the end.

Introductory Readings W. W. Norton

Presenting an analysis of modern-day extremism, this book explores how any group of people or participants in a movement--political, ideological, racial, ethnonational, religious, or issue-driven--can adopt extremist mindsets if they believe their existence or interests are threatened. Looking beyond "fringe" resistance groups already labeled as terrorists or subversives, the author examines conventional organizations--political parties, religious groups, corporations, interest groups, nation-states, police, and the military--that deploy extremist strategies to further their agendas. Dynamics of mutual causation process between dominant and resistant extremist groups are explored, including how resistant extremisms surface in response to oppressive and abusive measures advanced by the dominant groups to further their interests and maintain supremacy through systemic injustices, as happens in slavery, caste systems, patriarchy, colonialism, autocracy, exploitive capitalism, and discrimination against minorities.
