This paper explores Japan's role in reshaping the global pharmaceutical intellectual property regime by examining its position on the expansion of intellectual property rights (IPR) in negotiations for two regional trade agreements: the Trans Pacific Partnership Agreement (TPP) and

the Regional Comprehensive Economic Partnership (RCEP). Through systematic analysis of leaked negotiating texts documenting its positions on key issues, we demonstrate Japan is now playing a pivotal role in promoting the adoption of expanded IPRs. We show that its position as IPR champion in the Asia Pacific region reflects a domestic strategy initiated in 2013 to bolster pharmaceutical export growth. Drawing on past experience and focusing on the RCEP negotiations, we explore ways in which low and middle income countries might respond to this shift in order to protect and promote

access to medicines.

Readings in Cyberethics Intellectual Property

This book draws on a wide selection of interdisciplinary literature discussing complex adaptive systems - including scholarship from economics, political science, evolutionary biology, cognitive science, and religion - to apply general complexity tenets to the institutions, conceptual framework, and theoretical justifications of the copyright system, both in the United States and internationally. The author argues that copyrighted works are the products of complex creative

systems and, consequently, designers of copyright regimes for the global 'information ecosystem' should look to complexity theory for guidance. Urging legal scholars to undertake empirical studies of real-world copyright systems, Tussey reveals how the selection of workable configurations for the copyright regime is larger than that encompassed by the traditional, entirely theoretical, debate between private property rights and the commons. Finally, this unique study articulates how copyright law must tolerate certain chaotic elements that may be essential to the sustainability of complex systems.

This is the tenth in a series of volumes based on the annual workshops on EU Competition Law and Policy held at the Robert Schuman Centre of the European University Institute in Florence. The volume reproduces the materials of the roundtable debate which examined the interaction between competition law and intellectual property law. The workshop participants - a group of senior representatives of the Commission and

the national competition authorities of some EC Member States, reknowned international academics and legal practitioners - discussed the economic and legal issues that arise in this particular area of application of the EC competition rules, under the following headings: 1) whether the characteristics of intellectual property products/markets justify special treatment under the competition rules; 2) a critical assessment of the Block Exemption Regulation and corresponding Guidelines recently adopted in this area of EC competition law enforcement; 3) the specific enforcement issues that arise in relation to patent pools and collecting societies; and 4) specific problems related to IP in the domains of merger control and application of Article 82 EC.
