*Environmental Criminology* BRILL

Sustainability Matters is a compilation of

some of the best research papers by students from the National University of Singapore's inter-disciplinary graduate programme in environmental studies, the MSc in Environmental Management [MEM]. This collection is for the period 2009/10 to 2011/12. As the period covers 3 academic years, the papers

have been split into two volumes: Sustainability Matters: Asia's Green Challenges, and Sustainability Matters: Asia's Energy Concerns, Green Policies and Environmental Advocacy. These two volumes are the third and fourth compilation by the programme, and respectively comprise sixteen and fourteen of the best research papers completed during this period. The papers have been edited for brevity. These papers analyze the many challenges to effective environmental management in the context of different countries including India, Sri Lanka, Bangladesh, China, Hong Kong, Nepal, Singapore, and Thailand, and propose insightful solutions. The first compilation, Sustainability Matters: Environmental Management in Asia, was published in

2010 (World Scientific) and comprised the best papers from 2001/2 to 2006/7. The second, Sustainability Matters: Challenges and Opportunities in Environmental Management in Asia was published in 2011 (Pearson), and comprised the best papers from 2007/8 to 2008/09. Contents: Volume 1: Air Pollution: Development of Urban Traffic Pollution Control Strategies in Asian Cities: A Case Study from Chennai, India (Ashwinkumar Dakshinamurthi and Rajasekhar Balasubramanian) Assessment and Abatement Measures for Vehicular Air Pollution in Colombo, Sri Lanka (Chamila Weerathunghe and Rajasekhar Balasubramanian) Waste Management: Recycling in Singapore the Singapore Model: Strategies and Ways to

Improve (Tan Puay Cheow and Lye Lin Heng)Municipal Solid Waste Management in Southeast Asian Cities: The Next Steps (Boey Yinyin Edris and Rick Reidinger)Lessons for Integrated District-Level Food Waste Recycling Programs: A Review of Eight International Cases (Amireeta Rawlani and Kua Harn Wei)Singapore's Municipal Solid Waste Management: A Sustainable Model (Wendy Wong Shih Ling and Rick Reidinger)Utilization of Landfill Gas as a Renewable Source of Energy in India (Subhashini Kashinath and Zhou Zhi George)The Potential Role of Water Hyacinth in Wastewater Treatment in Nepal (Ram Bahadur Singh Maharjan and Chou Loke Ming)Improving Leachate Water Quality using a Wetland Treatment System in Lorong Halus — A

Pilot Study (Christian Budiman and Ting Yen-Ping)Life Cycle Assessment of an Urban Waste Refinery (Celia Chua Bee Hong and Kua Harn-Wei) A Study of the 3Rs (Reduce, Reuse, Recycle)Programs in Primary Schools, Singapore (Kelly Yong Kim-Lian and Victor R Savage)Urban Studies:Assessing Skywalk Systems as a Response to High Density Living in Hong Kong (Patricia Woo and Malone-Lee Lai Choo)The Management of Visitor Pressure on Coastal Parks of Singapore (Karen Lim Hui Khian and Chou Loke Ming)Sustainability in Singapore: An Ecological Footprint Perspective (Xin Jing Jing and Victor R Savage)Seagrasses in Singapore: Current Status and Long-Term Management Plans (Michelle Chng Wei Ping and Chou Loke Ming)The

Singapore's Bus System: An Analysis of Commuters' Satisfaction and Potential Improvements (Jan Martin Hecker and Lee Der Horng) An Assessment of Sustainable Cities (May Yadana Aung and Chou Loke-Ming) Urban Greenery as a Mitigation Strategy for Urban Heat Island Effect in High Density Commercial Districts of Dhaka (Nabanita Islam and Wong Nyuk-Hien) The Potential for Residential Water Conservation in Dhaka, Bangladesh (Sonia F Hoque, Asanga Gunawansa and Md. Mafizur Rahman) Planned Housing Environments and Children's Outdoor Play: Is Child-Friendliness Possible? (Md Rashed Bhuyan and Tracey Skelton) Green Business: Empowering the Bottom of the Pyramid: Government, Business, and Solar Power in India (Carrie Wallace

Candeto and Audrey Chia) Charting a Greener Course in Shipping: Incorporating Environmental Performance Indicators in a Tanker Pool System (Jean Chia E Ming and Audrey Chia) Environmental Practices of Indian Business Process Outsourcing: A Study of Two Companies (Sweta Sorab and Mark Goh) Green Business Strategies in the Precision Engineering Industry in Singapore (Gan Chin-Yean and Audrey Chua) The Second Green Revolution: A Review of the Challenges and Prospects (Leong Li-Sun and Victor R Savage) Towards Broader Implementation of Corporate Sustainability and Sustainability Reporting in the Construction Industry in Singapore (Kaia Margit Davis Tan and Audrey Chia) Volume 2: Biodiversity: The

Impact of Community Forestry on Biodiversity Conservation in Nepal (Ishwari Prasad Poudel and Chou Loke-Ming)Waste Management:Improving Leachate Water Quality Using a Wetland Treatment System in Lorong Halus — A Pilot Study (Christian Budiman and Ting Yen-Ping)Life Cycle Assessment of an Urban Waste Refinery (Celia Chua Bee-Hong and Kua Harn-Wei)A Study of the 3Rs (Reduce, Reuse, Recycle) Programs in Primary Schools, Singapore (Kelly Yong Kim-Lian and Victor R Savage)Urban Studies:An Assessment of Sustainable Cities (May Yadana Aung and Chou Loke-Ming)Urban Greenery as a Mitigation Strategy for Urban Heat Island Effect in High Density Commercial Districts of Dhaka, Bangladesh (Nabanita Islam and Wong Nyuk-Hien) The

Potential for Residential Water Conservation in Dhaka, Bangladesh (Sonia F Hoque, Asanga Gunawansa and Md Mafizur Rahman)Planned Housing Environments and Children's Outdoor Play: Is Child-Friendliness Possible? (Md Rashed Bhuyan and Tracey Skelton)Energy and Climate Change:Wind: The Alternative Source of Power for Singapore After Solar Energy? (Chew Keng-Hui and Lanry Yung)The Economics of Wind Energy (Alan Yau Wai-Hoo and Benjamin K Sovacool)Print Media and Climate Change: A Comparison of the 1992 Rio Summit and the 2009 Copenhagen Conference (Davina Loh and Victor R Savage)Green Business:Green Business Strategies in the Precision Engineering Industry in Singapore (Gan Chin-Yean and Audrey

Chia) *The Second Green Revolution: A Review of the Challenges and Prospects* (Leong Li-Sun and Victor R Savage) *Towards Broader Implementation of Corporate Sustainability and Sustainability Reporting in the Construction Industry in Singapore* (Kaia Margit Davis-Tan and Audrey Chia) *Readership: Graduate students, academics and researchers in environmental management/science.*

 Understandings of “nature” have expanded and changed, but the word has not lost importance at any level of discourse: it continues to hold a key place in conversations surrounding thought, ethics, and aesthetics. Nowhere is this more evident than in the interdisciplinary field of environmental studies. *Keywords for Environmental Studies* analyzes the central terms and debates currently structuring the most exciting research in and across environmental studies, including the environmental humanities, environmental social sciences,

sustainability sciences, and the sciences of nature. Sixty essays from humanists, social scientists, and scientists, each written about a single term, reveal the broad range of quantitative and qualitative approaches critical to the state of the field today. From “ecotourism” to “ecoterrorism,” from “genome” to “species,” this accessible volume illustrates the ways in which scholars are collaborating across disciplinary boundaries to reach shared understandings of key issues—such as extreme weather events or increasing global environmental inequities— in order to facilitate the pursuit of broad collective goals and actions. This book underscores the crucial realization that every discipline has a stake in the central environmental questions of our

time, and that interdisciplinary conversations not only enhance, but are requisite to environmental studies today. Visit [keywords.nyupress.org](http://keywords.nyupress.org) for online essays, teaching resources, and more. The SAGE Handbook of Tourism Studies Routledge  
This is the first volume of essays published on the television series *Troy: Fall of a City* (BBC One and Netflix, 2018). Covering a wide range of engaging topics, such as gender, race and politics, international scholars in the fields of classics, history and film studies discuss how the story of *Troy* has been recreated on screen to suit the expectations of modern audiences. The series is commended for the thought-provoking way it handles important issues arising from the Trojan War

narrative that continue to impact our society today. With discussions centered on epic narrative, cast and character, as well as tragic resonances, the contributors tackle gender roles by exploring the innovative ways in which mythological female figures such as Helen, Aphrodite and the Amazons are depicted in the series. An examination is also made into the concept of the hero and how the series challenges conventional representations of masculinity. We encounter a significant investigation of race focusing on the controversial casting of Achilles, Patroclus, Zeus and other series characters with Black actors. Several essays deal with the moral and ethical complexities surrounding warfare, power and politics. The significance of costume

and production design are also explored throughout the volume.

Companion to Environmental Studies  
CRC Press

Drawing on rich ethnographic work in both Eastern and Western Europe, *The New Environmentalism?* presents a range of case studies to explore the impact of corruption in EU-funded structural development projects. With detailed analyses of the forms and contexts of environmentalism, the book reveals the manner in which corruption is generated by the planning and implementation procedures of the projects, demonstrating in each case that environmental movements emerge as by-products of these processes, using corruption as part of a discourse employed in support of their action

against political (regional and state) institutions, as well as to communicate their goals to local citizens. Shedding light on the ways in which revelations about corruption are adopted as a means to fostering civic participation in environmental movements and influencing institutional trust, this book contributes to our understanding of the loss of legitimacy and trust in local and global political institutions. Comparative in approach, *The New Environmentalism?* provides new insights into the emergence of strong civic movements at local and trans-local levels, in resistance to citizens' sense of increasing alienation from political participation and decision making. As such, it will be of interest to anthropologists, sociologists and political

scientists concerned with questions of legitimacy, corruption and activism. [Screening Love and War in Troy: Fall of a City](#) Scientific e-Resources  
*Decentralization in Environmental Governance* is a critical reflection on the dangers and risks of governance renewal; warning against one-sided criticism on traditional command and control approaches to planning. The book formulates the arguments that support when and how governance renewal might be pursued, but this attempt is not just meant for practitioners and scholars interested in governance renewal. It is also useful for those interested in the challenge of navigating a plural landscape of diverse planning approaches, which are each rooted in contrasting theoretical and

philosophical positions. The book develops a strategy for making argued choices between alternative planning approaches, despite their theoretical and philosophical positions. It does so by revitalizing the idea that we can contingently relate alternative planning approaches to the circumstances encountered. It is an idea traced to contingency studies of the mid and late 20th century, reinterpreted here within a planning landscape dominated by notions of uncertainty, complexity and socially constructed knowledge. This approach, called 'Post-contingency', is both a theoretical investigation of arguments for navigating the theoretical plurality we face and an empirical study into renewing environmental governance. Next to its theoretical

ambitions, Decentralization in Environmental Governance is practical in offering a constructive critique on current processes of governance renewal in European environmental governance.

*Consuming Cities* PHI Learning Pvt. Ltd.

This book is an effective teaching tool that raises a number of theoretical & methodological issues regarding the study of criminal events.

*Classics in Environmental Criminology*  
CRC Press

"The strongest overview I have encountered of the scope and the current state of research across all the fields involved in advancing our understanding of tourism. For its range of topics, depth of analyses, and distinction of its contributors, nothing is

comparable." - Professor Dean MacCannell, University of California, Davis "The breadth of vision and sweep of accounts is remarkable, and range of topics laudable... a rare combination of the authoritative, the challenging and stimulating." - Professor Mike Crang, Durham University Tourism studies developed as a sub-branch of older disciplines in the social sciences, such as anthropology, sociology and economics, and newer applied fields of study in hospitality management, civil rights and transport studies. This Handbook is a sign of the maturity of the field. It provides an essential resource for teachers and students to determine the roots, key issues and agenda of tourism studies, exploring: The evolution and position of tourism studies The

relationship of tourism to culture The ecology and economics of tourism Special events and destination management Methodologies of study Tourism and transport Tourism and heritage Tourism and postcolonialism Global tourist business operations Ranging from local to global issues, and from questions of management to the ethical dilemmas of tourism, this is a comprehensive, critically informed, constructively organized overview of the field. It draws together an interdisciplinary group of contributors who are among the most celebrated names in the field and will be quickly recognized as a landmark in the new and expanding field of tourism studies. The Road Towards DemocraCity Springer Nature

Silver-grey manpower is a gold mine to society. One by one, the baby boom cohorts will reach the age of 65 starting from 2010. They are large cohorts, relatively well educated and healthy with considerable pension and health care rights. In short, they are lucky devils. As a result of ageing, cohorts that were born in 1985 onwards and that enter the labour market as from approximately 2010 will be required to pay many additional taxes during the course of their entire working life spanning more than forty years. They are, in short, unlucky dogs. Redistribution of joys and burdens could trigger conflicts between generations. A better solution is to identify and deploy society's hidden resources. Taking this issue as a basis, the book in hand explores strategies that

enable senior citizens and young people to give meaning to solidarity among generations, for a start in 2012 as the European Year for Active Ageing, but also as part of Europe 2020, the European Commission's 2010-2020 strategy. With these two strategies journalists and television producers will swing into action. In secondary and higher education as well as in universities more papers on life courses and patterns of generations will be written than ever before. Senior citizens' unions but actually all social organizations will organize lectures. Educated laymen will wish to go deeply into this issue. Henk A. Becker (1933) is Professor Emeritus of Sociology at Utrecht University in the Netherlands. He has worked on a research project

focusing on generations since 1985.

**An Annotated Bibliography** SIU Press

In this book the author re-examines the relevance of the seminal texts of western civilization for the present environmental debate. He is arguing that what we today know as 'Christian cosmology' is in fact a grafting of classical Greek philosophy onto ancient Israelite thought, with certain valuable traditions being all but lost in the process. The dietary laws of Leviticus and Deuteronomy, in particular, still prove surprisingly relevant today.

Classics in Environmental Studies  
An Overview of Classic Texts in  
Environmental Studies  
*Composition and the Rhetoric of Science*

Presbyterian Publishing Corp

A careful analysis of environmental factors is key to understanding the causes of crime, to solving crimes, and eventually helping to predict and prevent them. Classics in Environmental Criminology is a comprehensive collection of seminal pieces from legendary contributors who focus on the role that the immediate environment plays in the occurrence

*Environment* Yale University Press

This book sets out some positive directions to move forward including government policy and regulatory options, an innovative GRID (Greening, Regenerative, Improvement Districts) scheme that can assist with funding and management, and the first steps towards an innovative carbon credit

scheme for the built environment. Decarbonising cities is a global agenda with huge significance for the future of urban civilisation. Global demonstrations have shown that technology and design issues are largely solved. However, the mainstreaming of low carbon urban development, particularly at the precinct scale, currently lacks sufficient: standards for measuring carbon covering operational, embodied and transport emissions; assessment and decision-making tools to assist in design options; certifying processes for carbon neutrality within the built environment; and accreditation processes for enabling carbon credits to be generated from precinct-wide urban development. Numerous barriers are currently hindering greater adoption of high

performance, low carbon developments, many of which relate to implementation and governance. How to enable and manage precinct-scale renewables and other low carbon technologies within an urban setting is a particular challenge. Environmental Sociology Routledge The third edition of John Hannigan's classic undergraduate text has been fully updated and revised to highlight contemporary trends and controversies within global environmental sociology. Environmental Sociology offers a distinctive, balanced treatment of environmental issues, reconciling Hannigan's much-cited model of the social construction of environmental problems and controversies with an environmental justice perspective that stresses inequality and toxic threats to

local communities.

*Air Pollution* Routledge

Air pollution occurs in many forms but can generally be thought of as gaseous and particulate contaminants that are present in the earth's atmosphere.

Gaseous pollutant sinclude sulfur dioxide (SO<sub>2</sub>), nitrogen oxides (NO<sub>2</sub>), ozone (O<sub>3</sub>), carbon monoxide (CO), volatile organic compounds (VOC), hydrogen sulfide (H<sub>2</sub>S), hydrogen fluoride (HF), and various gaseous forms of metals. These pollutants are emitted from large stationary sources such as fossil fuel fired power plants, smelters, industrial boilers, petroleum refineries, and manufacturing facilities as well as from area and mobile sources. They are corrosive to various materials which causes damage to cultural resources,

can cause injury to ecosystems and organisms, aggravate respiratory diseases, and reduce visibility. Air pollution injury to plants can be evident in several ways. Injury to foliage may be visible in a short time and appear as necrotic lesions (dead tissue), or it can develop slowly as a yellowing or chlorosis of the leaf. There may be a reduction in growth of various portions of a plant. Plants may be killed outright, but they usually do not succumb until they have suffered recurrent injury. Today's marketplace is increasingly dependent on satisfying a myriad of local environmental requirement, the demands of environmental aware customers and the global voluntary environmental initiatives. Industry has made great progress in its efforts to

protect the environment and has spent hundreds of billions of dollars to decrease the release of toxic substances into the environment, while also developing technologies to reduce or eliminate hazardous waste generation. Many industries taking initiatives, coupled with advances in technology, are changing the way of responding to their environmental obligations. The book provided information on rational basis for air quality management and green belt development in urban areas.

**A Creative Approach to Transition in a Post-Development Based Society**

World Scientific

The Routledge Handbook of Identity and the Environment in the Classical and Medieval Worlds explores how environment was thought to shape

ethnicity and identity, discussing developments in early natural philosophy and historical ethnographies. Defining 'environment' broadly to include not only physical but also cultural environments, natural and constructed, the volume considers the multifarious ways in which environment was understood to shape the culture and physical characteristics of peoples, as well as how the ancients manipulated their environments to achieve a desired identity. This diverse collection includes studies not only of the Greco-Roman world, but also ancient China and the European, Jewish and Arab inheritors and transmitters of classical thought. In recent years, work in this subject has been confined mostly to the discussion of texts that reflect an approach to the

barbarian as 'other'. The Routledge Handbook of Identity and the Environment in the Classical and Medieval Worlds takes the discussion of ethnicity on a fresh course, contextualising the concept of the barbarian within rational discourses such as cartography, medicine, and mathematical sciences, an approach that allows us to more clearly discern the varied and nuanced approaches to ethnic identity which abounded in antiquity. The innovative and thought-provoking material in this volume realises new directions in the study of identity in the Classical and Medieval worlds.

DDT, Silent Spring, and the Rise of Environmentalism Edward Elgar Publishing

Winner of the History of Science Society's Watson Davis and Helen Miles Davis Prize in the History of Science. From the early exploits of Teddy Roosevelt in Africa to blockbuster films such as March of the Penguins, Gregg Mitman's Reel Nature reveals how changing values, scientific developments, and new technologies have come to shape American encounters with wildlife on and off the big screen. Whether crafted to elicit thrills or to educate audiences about the real-life drama of threatened wildlife, nature films then and now have had an enormous impact on how Americans see, think about, consume, and struggle to protect animals across the globe. For more information about the author go to: <http://gmitman.com/>

*Placeways* Uitgeverij Van Gorcum  
 Human Landscapes in Classical Antiquity shows how today's environmental and ecological concerns can help illuminate our study of the ancient world. The contributors consider how the Greeks and Romans perceived their natural world, and how their perceptions affected society. The effects of human settlement and cultivation on the landscape are considered, as well as the representation of landscape in Attic drama. Various aspects of farming, such as the use of terraces and the significance of olive growing are examined. The uncultivated landscape was also important: hunting was a key social ritual for Greek and hellenistic elites, and 'wild' places were not wastelands but played an essential

economic role. The Romans' attempts to control their environment are analyzed. This volume shows how Greeks and Romans worked hand in hand with their natural environment and not against it. It represents an outstanding collaboration between the disciplines of history and archaeology.

Environmental Challenges on the Road to 2100 Wintergreen Orchard House

This book discusses the challenges faced by the homo resaliens and his need for a transition to a more sustainable social, economic, and environmental system. It fills a gap in the existing literature and provides a new perspective by changing the etymology of the word resilience: no more resiliere, but resalio. By comparing and analysing the relevant literature, the author has coined the term homo

resaliens (resilient man), in contrast to the failure of the homo oeconomicus, the corruption of the homo politicus, the incompleteness of homo sustinens, and the limits of homo ecologicus. Opening a new debate in which the role of academia and res publica are fundamental to safeguard human communities and future generations, this book will greatly assist governments that wish to understand the socio-political and economic implication of resilience in terms of social inclusiveness and long term social and environmental sustainability.

*The Torah and the Stoics on humankind and nature* Routledge

Conservation was the first nationwide political movement in American history to grapple with environmental problems

like waste, pollution, resource exhaustion, and sustainability. At its height, the conservation movement was a critical aspect of the broader reforms undertaken in the Progressive Era (1890-1910), as the rapidly industrializing nation struggled to protect human health, natural beauty, and "national efficiency." This highly effective Progressive Era movement was distinct from earlier conservation efforts and later environmentalist reforms. Conservation in the Progressive Era places conservation in historical context, using the words of participants in and opponents to the movement. Together, the documents collected here reveal the various and sometimes conflicting uses of the term "conservation" and the contested nature of the reforms it

described. This collection includes classic texts by such well-known figures as Theodore Roosevelt, Gifford Pinchot, and John Muir, as well as texts from lesser-known but equally important voices that are often overlooked in environmental studies: those of rural communities, women, and the working class. These lively selections provoke unexpected questions and ideas about many of the significant environmental issues facing us today.

Sustainability Matters Routledge

Based upon a social science approach to understanding the significance of tourism in contemporary society, Andrew Holden's fascinating book highlights tourism as a multidisciplinary area of study with rich and varied theoretical underpinnings. Here, Holden introduces

social science disciplines and applies relevant theories to the understanding of tourism. He investigates how the economic and political structures of society influence the manifestation of tourism at a global level, and subsequently considers a variety of topical issues including citizenship and social exclusion, tourism as a form of trade, consumerism, the consequences of tourism, and feminism and ethics. Each chapter includes: a brief introductory summary of the discipline a critique of its main theories and concepts which have relevance to tourism a discussion of how the theories and concepts have been applied to tourism using cases and examples international case studies and examples. Punctuated with study and teaching

aids, chapter summaries and 'think points' to encourage reflection, this

excellent, broad-ranging textbook provides a wider understanding of tourism's role in society.
