International Affairs International Trade Statistics
 Professor Erik Thorbecke's study, here published, continues the empirical work undertaken by Folke Hilgerdt for the League of Nations. It is a study of actual trade and payments derived laboriously from the voluminous statistical data published by national governments and international institutions. The collection, analysis and interpretation of this mass of data involved much patient industry, but in the process of brooding over the detail a truer understanding of the complex structure of world trade was gained than could be achieved in any other way. Trade of course is nearly always bilateral. When goods are re-exported they are, for the most part, refashioned and changed into essentially new utilities. What is multilateral or bilateral or regional in a system of international trade is the method of payment. The justification for multilateralism is the opportunity it affords for countries to specialize, so that one country may use the foreign exchange earned by its exports to buy imports from a third country. Indeed this statement in terms of countries obscures the ultimate realities. In a free multilateral system it is individuals who import and export. When they can freely buy and sell the foreign exchange acquired or required for their transactions, payments are multilateral and the network of trade extends widely across political boundaries. What Mr. Thorbecke shows is that political controls of payments have confined more trade within restricted channels.

After World War II, major economic policy issues arose within the free world because many nations chose to discriminate in their international trade and payments, hoping to further their national objectives. Professor Patterson analyzes what each of these nations hoped to gain. Originally published in 1966. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

This new edition of World Trade and Payments retains those features that have made it such a highly respected and successful text. Once again it offers clear coverage of sophisticated models supported by the latest empirical research, all made easily understandable by a wealth of issues and applications. In addition, new theoretical developments have been incorporated to keep the text up-to-date. The balanced coverage of trade and finance features updated material on the multinational enterprise, the political economy of trade controls, the outcome of the Uruguay Round of international tariff negotiations, and the new World Trade Organization. Also, there are entirely new discussions on the Eastern European economies in transition, trade policies, and the development of newly industrialized countries.

A groundbreaking contribution to the economic literature, this book explores why postwar trade and payments have evolved as they have, the prospects for future evolution, and the range of policy adjustments likely to be required. Through a rigorous examination of historical records, Cohen reveals for the first time the existence of distinct and parallel cycles in world trade and payments and utilizes newly researched data to explore the much-heralded J-curve and its relevance in relating exchange rates to trade balances. The author offers a set of recommendations to reduce such imbalances through a new "Cycle of Adjustment."

Growing concern over the U.S. trade deficit in 1978 and 1979 and depreciation of the dollar in foreign exchange markets caused concern over U.S. trade policies. In order to help fill the need for long-range world trade information, a detailed report was compiled from past GAO reports and testimony, published data on the issues discussed, and from agency and congressional records, testimony, and reference material. The following questions are posed as chapter headings and explored in detail: (1) What has happened with U.S. trade and payments problems since 1975? (2) Is there a coherent international trade policy? (3) Is the Government's organization adequate for handling trade matters? (4) Will the dollar exchange rate redress the trade imbalance? (5) Can export controls be administered better to support U.S. export goals? (6) Can foreign trade barriers/import restrictions be reduced? (7) Should something be done about imports? (8) Are changes needed in U.S. investment policies? (9) Can productivity be increased to make U.S. products more competitive? (10) What is the relationship between technology transfer and trade? (11) What effect does government regulation have on exports and imports? (12) Will government promotion increase U.S. exports? (13) What export financing assistance should be made available to exporters? (14) Can the U.S. payments position be improved through better administration of collections and payments? Appendices included in the report present a review of trade and payments legislation and a directory of selected GAO reports on trade and international payments issued since July 1973.

PAPERS OF THE WORLD TRADE CONFERENCE 1985 HELD IN AMSTERDAM ON THE OCCASION OF THE OPENING OF THE WORLD TRADE CENTER

AMSTERDAM ON 4,5, AND 6 SEPTEMBER 1985 Between the covers of this book the reader will find the papers presented at the World Trade Conference 1985, held on 4,5 and 6 September 1985. This conference was organized by the World Trade Center Amsterdam, the University of Amsterdam and the Free University of Amsterdam on the occasion of the opening of the World Trade Center Amsterdam. The aim was to bring together businessmen, academics and policy makers in order to study problems of international trade and finance from a variety of viewpoints, sc. of those who are engaged in the cut and thrust of trade and finance, those who analyse it without being themselves involved, and those who regulate it. Hopefully this resulted in some useful cross fertilisation. The conference covered not only the whole globe, including the Japanese threat, the problems of the dollar, East-West trade, the Pacific Basin, barter trade etcetera, but also spanned a long historical period. The present and the future were examined, but also the past. The articles provide a round-up of what's going on in the field of international trade and finance. They cover a wide field, not remaining within the traditional boundaries of international economics. At the same time, the organizers strove to avoid shallowness.
