NPL is investigating novel air temperature measurements and uncertainty of temperature sensors in air, to benefit humidity science, meteorology , and other users needing accurate gas temperature measurements.Humidity

and moisture measurement - NPLHumidity. Humidity is measured in many air control applications, where the relative humidity is for the most part over 10 %. Relative humidity (RH) is a measure of the water vapor content of air. For more information, read what relative humidity is and why it is important.Humidity, Dew Point and Moisture | VaisalaThe percentage of water vapor in the air compared to the maximum water vapor that air can hold at any given temperature is known as the humidity of air. More the humidity, more one feels stickiness in the air, which is because of the moisture present in air. At any given temperature, air has a specific capacity to hold moisture.
